Case No. 2.—Miss E. P., aged 19 years, first seen on August 2, 1890. She had had before my arrival eleven spasms similar to those described in case No. 1. Except that she gave no manifestations of consciousness in the interium until after my arrival, when it was found that she was aware of all that happened in the room. The globus hystericus was a well marked feature, the girl tearing frantically at her throat as the convulsions came on. The treatment, consisting of morphia and atropia, hypodermatically, chloral per rectum and by the stomach, bromides in large doses, clearing the alimentary canal by large doses of castor oil, and an emetic of powdered ipecac, all failed to afford permanent relief. Four ounces of blood were taken from the arm, with some benefit, (caused possibly by the mental rather than the physical impression made by its abstraction.) As a last resort, on August 6th, two grains of the yellow sub-sulphate of mercury were given, followed by copious draughts of hot water, immediately after its physiological effects secured most prompt and permanent relief, the patient having had no return of the symptoms as late as a few months ago, when she removed with her family to an adjoining state.

Case No. 3.—Miss J. C., aged 20 years, of nervous temperament, though of ordinary good health. There is no history of any previous attack of the kind. There had been, shortly before her illness from derangement of the catamenia incident to exposure to draughts or cold. On the 21st of March, 1891, she complained of headache across the brow and afterwards of alternate flushings of heat and cold sensations, with some pain in the lumbar region. On the 22d she was apparently well, making no complaint whatever until about 6 P. M., when she had a "fit." These "fits" continued at shortening intervals until the 24th, when the writer was called. The patient was found propped up in bed with pillows, perfectly conscious and able to answer all questions intelligently. She said there was some pain in her back and general muscular soreness and also a "curious pain in her tongue." When asked if she knew when a spasm was coming on she said "yes, they come on by an appearance like smoke before my eyes and then I smother." While still engaged in conversation with the writer she began to spit and slabber, when several bystanders immediately seized her and held her in anticipation of the spasm which came on immediately; the whole frame was convulsed, the eyes rolled back and alternately opened and shut very rapidly, (something I have not noticed in any other case,) the jaws were fixed at first and then came to with a sharp click or snap. Consciousness during the fit was abolished. The tongue was not bitten. There was no blood in the saliva that escaped from her mouth. The duration of the spasm was probably 30 seconds. In exactly 15 minutes, during which time complete consciousness was regained, another convulsion occurred. They were controlled by chloroform, and a hypodermatic injection of morphiæ sulph. gr. $\frac{1}{2}$, atropiæ sulph. gr. $\frac{1}{75}$, with the effect of stopping them until the next day,

when I was re-called. During my absence some of the neighbors, who had collected, suggested the idea of hydrophobia from a dog bite she had gotten two years ago. It was not known that she had heard the conversation but soon afterwards she began to have a hoarse cough and to try to bite those around her as well as to lap the water which was given her to drink. It should have been mentioned that her appetite was, during the whole of her illness, voracious, and that there was no difficulty whatever in swallowing. On my second visit I found her raving, she did not appear to remember my name, calling me "Moad," (the name of a neighboring farmer,) but knew my business perfectly well, begging me to "keep the smoke away." She bit at her father who was supporting her head, and had a convulsion exactly like those described above. I talked to her and told her that her biting and lapping was all nonsense, then holding her head and placing a cup of water to her mouth bade her drink, she lapped. Throwing her head back the cup was pressed between her teeth and its contents were swallowed without difficulty. Her arm was corded and an ounce or two of blood drawn with no effect except to slightly increase the interval between the spasms. Two ounces of castor oil were given which caused a large dejection in a short time. Chloroform, bromides, morphia, gelsemium, and chloral, were all tried with temporary relief, lasting only during the sleep which was produced. There had been occasional vomiting from over-loading the stomach with food and water which had been given her without stint during my absence. I had been unable to make a positive diagnosis up to the second visit when the pseudo-hydrophobic symptoms manifested themselves. The neighbors were sent away and quiet secured. The emetic used in both the other cases was given with the happiest results, the snapping, lapping and fits all stopping as the deathly sickness caused by the emetic came on, and a quiet sleep supervened as it went off. On the next day she said she felt very well and wanted to get up. The temperature which at my first visit had been 99° F. was on the day after the trouble was ended but normal, the thermometer in the axilla registering 97° F., attributable, no doubt, to exhaustion. A small amount of a stimulant with a liquid diet and a general tonic were ordered.

A talent may be developed in the cloister; character can only be perfected in the world.

THE RELATION OF IMPERFECT SURGERY TO THE SEQUELÆ OF PELVIC AND ABDOMINAL OPERATIONS.[1]

BY JOSEPH E. HOFFMAN, M. D.

So much has lately been said and written relative to the results and, therefore, to the justifiability of abdominal and pelvic operations that it is necessary for the candid critic and honest operator to stop and consider what on the one hand is the exact status of the repentant critics and of their changed attitude toward the position and merits of surgery, and on the other how far inexact methods are accountable for some of the failures and misfortunes of what would otherwise be a field of almost unprecedented brilliancy and encouragement in the results that have been obtained in this branch of surgery.

In the first place it is to be noted that of all the men who have gained prominence in any of the various domains of surgery in general, not one has abandoned that specialty from a surgical standpoint in order to treat it empirically by any other method. Sir Henry Thompson, for instance, has not departed from the exact surgery of the bladder in order to destroy its calculi by solvents or electricity; Mr. Macewen, bone surgery; or Schaeffer, orthopædics. What is meant to be here illustrated is that when a man has once chosen a specialty and worked up to that specialty by an experience gained by natural selection and application, his specialty has become so much a part of him that its abandonment is just as impossible as the negation of the laws of gravity. His training makes it the law of his mental gravity, and the same laws apply to it as to weight and inertia in the physical world. The greater his experience, the longer his training, the more certain is he in regard to the limitations, the requirements, the possibilities of his work, and as a result of all this his position, when taken, is an entrenched one, from which he is not to be moved and made a weathercock of every shade of opinion, whether of madmen, fools or philosophers, for none of these are apt to speak from a practical experience, in surgery at least, and practice, not theory, has made surgery what it is.

That there are specialties in surgery has come about by the consensus of opinion among surgeons in general, and physicians, strictly so-called, that there is need of them.

[1] Read before the Phila. County Med. Society, May 27, 1891.

The specialist in any branch is the living embodiment of the necessity of his work. To whom then is the title of "specialist" to be applied? In each branch confessedly, to those who work conformably with their expressed sentiment, or if not teachers whose line of procedure is uniform and the result either of their own experience wrought out by laborious painstaking, or conforms with that of other expert workers in the same line.

To that class of see-saw workers who anon are this and anon are that the name specialist should be applied. For accurate exact surgery, we cannot look to the electrician or the dabbler in it. If one condemns a procedure to-day and extols it to-morrow we are brought to the point of inquiry, Which view is correct, which has the vantage of observation? or perhaps, Is either expression of any value whatever, or is the change made like that of the slight-of-hand man to puzzle his audience and bring in a set of new admirers to be pleased by the rare and startling exhibition of surgical acrobatics, a surgery in which the constant is differentiated out of sight by the variable.?

These inquiries and lines of thought are suggestive of some of the causes we have to consider in the relation of imperfect work to the sequelæ of abdominal and pelvic surgery. What has been said of experience as a necessity for a firm faith in the necessity of any special branch of work, is true with just as much force when the ability to do such work is considered. The appalling eagerness with which men with only a diploma as a justification and a safeguard from the hand of the law to do abdominal surgery is one of the startling features in the history of this work. In no other branch of the art has there ever been any approach to such audacity. That fools rush in where angels fear to tread has never been more aptly illustrated. Training has been, nay still is, rejected, while the work is sought, and if the case is found willing to be offered up an offering to the prurient itch of a surgical pretender, the case is at once reported as a wonderful cure in the hands of the youthful aspirant, or if unsuccessful is recorded, heralded, and posted up as a warning against all surgery in general, and against that sugeon in particular who has been rash enough to loan both his instruments and experience to a neophyte with no other experience than ingrown toenails and vaccination, now hiding and excusing himself and his failure behind the experience of the too easy friend, who by a mistaken kindness has martyred both himself and surgery and done both an irreparable injury. I take it that it should be the rule of all surgeons to assist no one who has not studied, observed and assisted in such work. There is no excuse or reason here for a man to begin with all the faults and errors of the early operators, and again work out the technique of this branch of surgery in a series of failures and calamities that once well-nigh led to its abandonment. The work of such men cannot be other than imperfect, and must reflect upon surgical interferences in these affections in the minds of the uncritical and unthinking. Another class of operators to be carefully watched, is those who, by fair means or foul, are bound to obtain prominence. These men have lain in wait for operations, as the moonshiners for a cloudy night, to bring themselves into prominence, let us say notoriety. These men have opened abdomens, not to operate, but to do the first step of an operation. I can this moment put my hands on such a case, in whom nothing was found wrong, but there was a chance to perpetrate a pet fad, and the woman is now dragging out an existence after three subsequent operations, all the result of the first unnecessary tinkering. If we are to criticise abdominal surgery, let us not do so with the results of such operators and their methods before our eyes. Let us rather criticise the crude methods and cruder morals, or if you please the code that tolerates apprentices and dabblers to do with the bodies of our patients for the like of which we would ruin the reputation of our tailor or well-nigh mob a cobbler. That such surgery has been overdone is just as true as it is that it has no right to be considered surgery at all. And just here it is to be said that among men of this class, I mean those who have done the kind of work just referred to, we are bound to find our latter-day conservatives and repentants. Of all those who have gained and kept a name as foremost in the rank of abdominal surgeons, we find no recanters. These are almost always to be found in the lines of failure or discouragement or embarrassment. If a man has made blunders he is a fool not to perceive them, or if the real spirit of surgery is beyond him and he feels it, he alike is bound on the one hand to retrieve past misfortune by so-called conservatism, sitting on the pons asinorum watching the stream of surgery flow by, and with it the hopes that he no more has chance of realizing. On the other, having neither the spirit of surgery within him nor the courage to attain it by drill and application, nothing is left

for him but to be a dissenter, to decry all surgery as mutilation, nothing justifiable but conservatism. From this standpoint I make the plea that each one of us, before he condemns surgery, its justifiability or its results, shall judge of them all. As sensible men and women, saying that we are in need of surgical attention, to whom shall we go? To the apologists for their work, to those who have operated themselves into repentance, who have made an experience only to regret it? Certainly not. Experience and judgment in this work is no more to be gotten in lumps, than can knowledge be bought by the wagonload of books.

If there has not been an antecedent experience from which special knowledge has been differentiated, this special knowledge, though it may be wide enough theoretically, practically is cramped and dwarfed. The wider the general experience, the more exact will be the special. Having considered the class of operators we must look to for errors and repentance, let us look at the work as surgery simply, not in the light of miracles it is supposed and often promised to work. Miracles nothing human can perform. No surgeon has a right to promise an absolutely certain result in every case. I have too frequently heard promised, "The operation will make you a well woman." Patients are persuaded into operation when they should be left to choose it for themselves. I have nothing but condolence, may be contempt, for the surgeon who has to persuade his patients to be operated upon. Herein comes a great deal of the blame of surgery in the abdomen and pelvis. Who ever heard of a surgeon's having to persuade a patient to put a splint upon a broken leg or a ligature around a bleeding vessel? The indications for every operation should be plainly stated, and the patient or her responsible friends be responsible for the decision for or against operation.

The disasters of operation, on the other hand, ought not to be attributed to the inherent danger of abdominal or pelvic interference. We are to remember that, as a rule, except in extreme hæmorrhage and in diseases implicating the kidneys, bladder, or uterus, abdominal operations ought to be, as a rule, successful. It is well for all aspiring operators, and for many who consider themselves established, to ponder well the words of Savage. He says: "I think we ought to get into our minds, as a prominent idea, the view that after an abdominal operation a death should be considered to an extent as preventable, and that when one does occur we should hold with ourselves a moral inquest as to the cause, how it might have been prevented, and whether in any way it was associated with aught relating to ourselves." As time goes on, I am more persuaded that in the question of success or failure, less and less depends on the patient, her conditions and surroundings, and more and more on ourselves and the attention to certain details which have been found to be essential." With such a standard as this a man cannot fail to do the best possible work. High ideals, though they never be quite realized, are a safeguard against the nauseating complacency with which certain operators contemplate their woeful results, blaming either Providence or the nurse, allowing themselves to escape unscathed.

It is well just here to consider Mr. Savage's expression when he says "Less and less depends upon the patient, her condition and surroundings," for this is at once too wide and at the same time widely true. It is just as evident that patients go on suffering time and time again, until they are hopelessly ill, as it is that, if taken earlier, no matter what their surroundings, they could have been cured. This fact must stand out a perpetual contradiction to those who in charity advertisements for private aggrandizement laud in season and out the over-laudatory achievements of hospital surgery. Right here I want to say that the best results that have ever been gotten in this city in a wide series of cases have been done in private houses, many of them have none of the recognized conveniences either for comfort or ideal cleanliness. The room that the patient occupied was often the only clean one in the house, and yet, as a rule, all of these patients get well. We, as operators, have no business to scare a patient into a hospital for our own convenience.

By doing so we bring into the chances of her recovery an additional element of doubt.

In estimating the importance of the sequelæ of any surgical operation, we must compare them with the gravity of the condition for which the operation was done. Generally speaking, promptitude in ridding a patient of any surgical disease is a step toward avoiding after complications as well as primary impediment to rapid satisfactory work. If a patient is suffering from suppurative abdominal disease, which by its presence threatens life primarily by septicæmia, or indirectly by secondary implication of vital organs, the fact that a hernia or fistula remains after operation is no argument either against the advisability of operation nor

against the results of the operation. The argument rather rebounds against the critics, and should convince them that early operation, while giving the patient a better primary chance for life, secondarily would leave him in better condition to resist the influences that tend to prevent prompt healing and, therefore, conduce to fistula and hernia formation. To appreciate these and other pathological points, a thorough appreciation of the pathology of pelvic inflammation is necessary. A devotee of the ancient doctrines of pelvic cellulitis, has no hope of becoming either a skillful diagnostician in or a surgeon of pelvic disease, since his supposed pathology does not agree with the actual condition of affairs, and hence he is handicapped from the start and the incubus of tradition must be fatal to his progress

In advanced cases of tubal and ovarian disease, theory will tell him to treat the disease by derivative measures, aiding himself possibly by closure of a cervix, when lo! the patient grows worse in his hands, and is only rescued by the merest chance by final resort to the abdominal section. In such cases it is no uncommon condition in which there is such a generally vicious condition that healthy tissue in which to place a ligature can scarcely be found, and the result is a fistula, through which a ligature ultimately is passed. Here only the most careful technique, of making a good stump, cleaning out the necrosed tissue for this purpose, and diligence in using accurately all precautions against infecting the ligature while it is being placed around the pedicle, will prevent the formation of fistula, or at least of the conditions that will result therein. Herniæ are cited as a perpetual menace against the propriety of abdominal operation. Women are said to be worse from them than from their original trouble. In these cases the value of personal opinion goes very little to announce the true condition. The surgeon or the critic of surgery who estimates the value of either medicine or surgery by the reports of the patient will argue from very uncertain and worthless data. Some patients will complain more from a slight hernia than originally they did at the trouble necessitating operation, or at least their complaints are very distinct. In the first they groaned in anguish, begging relief, while at last they repudiate all surgery because they no longer suffer torture at each menstrual period. To this they are frequently encouraged by meddlesome women who, never having suffered, cannot appreciate the tortures of disease, or by malevolent professional rivals who descend to such indecent methods in order to compass the ruin or professional distrust of the community against the operator. As a rule, herniæ and fistulæ especially should be rare. Hernia is a constant danger in fat women, both as primary owing to the uncertain healing of the fat, and secondarily as a result of weakening the abdominal support. Hence the rule should be in all such cases to keep the patient in bed much longer than is required to heal the incision, and after getting up constantly to wear an abdominal support. A failure so to advise is just as culpable as to admit the elastic support over a dislocated patella, and can only occur as the result of sheer carelessness or ignorance of the requirements of this special class of cases. Fistulæ besides resulting from ligatures, may have their origin in lesions of the intestine resulting from the freeing of adhesions. Fecal fistulæ are rarely persistent, almost never so, and in the great majority of cases can be avoided if a careful watch is had over the bowel involved in the adhesions. Here the result of bad work must result disastrously, both so far as perpetuating the fistula is concerned and in doing damage to the intestine. To obtain perfect results the intestine is so to be mended, not only to prevent leakage of its contents, but also to avoid adhesions compromising its function and conducing to obstruction. In this relation the deaths from intestinal obstruction after operation are to be considered. In the hands of experienced operators this rarely if ever happens, and if it occurs it is recognized and relieved. One death occurring from such cause coming under my knowledge was the direct result of placing the patient shortly after operation in the care of a physician without any experience whatever in a surgical way. The complication accordingly was not understood, and by the time surgical aid was sought the woman was practically dead. Imperfect after-attention of surgeons eager only to operate, has been and will continue to be the cause of much reproach to surgery. Until his patient is out of bed and moving about freely, the surgeon has no right to dismiss her as cured. If a hernia occur after operation it is the duty of the surgeon to explain its nature and make early effort to cure it. The earlier it is cured the less will be the obstacles in the way of permanent relief. To have a patient die of operation for hernia, the result of the surgeon's own operation, ought to be a calamity almost unheard of. Nevertheless it ought to be understood that, owing to the size of the sac, and the consequent extent of the adhesions, some herniæ

are practically incurable unless at a great risk. One such case is still fresh in my memory, in which, after a long relief, the hernia again returned. The woman was very fat, and with the difficulties of a former operation fresh in my mind I refused another.

There is no use in operating and reoperating in unfavorable cases until at last the patient is lost. Surgery nor the surgeon receives credit, while the patient receives no benefit. Imperfect knowledge of how to drain is at the bottom of many failures in the surgery of the abdomen. I once knew the question to be asked by a man following up the matters of abdominal surgery, very far off to be sure, "How long does the tube stay in—till it smells?" I have seen a tube removed containing more than an inch of coagulated serum, this last in the hands of an operator who ought to know better than now to advise the cleansing of the tube once every twelve hours, or some such long interval. A drainage-tube that needs cleansing or emptying only once in twelve hours had better be kept clean in the bag until it is wanted. Such advice as to the use of the tube is worse than worthless. To be valuable, information must come from those who are informed not from those who are guessing or using the tube under protest or because some one else uses it. It is better not used than badly or carelessly used. Drainage and the conditions that require it must always remain a disputed question, but one fact alone must forever keep its opponents on the defensive, and that is that those who advocate it most have had the most experience with it, and that their cases so treated run a most uneventful course, even in most serious antecedent conditions. One point negativing its advantages in some cases urgently needing it, is the semi-delirious condition of the patient during the first few days immediately following operation. These patients are unruly and their unrest will disturb the position of the tube and render it at once irritating and useless. I have two patients in mind in whom I believe the tube on this account would havs been a serious disadvantage. In another in whom I considered it advisable, I removed it at once when it had become displaced. I shall never forget the anxiety with which I watched over this patient through several days, fearing the oncoming of peritonitis and dreading the necessity of reopening the abdomen.

But if the proper use of the drainage-tube is essential to success, it is to be remembered that crevices created by desultory breaking up of adhesions at the bottom of the pelvis, having no common outlet by which they may drain, are beyond the reach of a single tube; hence, in appendicitis, for example, the careful placing of an additional rubber tube often gives security when otherwise, at best, the end would be doubtful. A case of my own is here vividly before me and brings out the theory justified by results.

When it is sought to break up adhesions on either side of the pelvis because one side seemingly presents less difficulty than the other, the more difficult should not be abandoned when once begun, unless it is plainly evident that by freeing the simpler side a vantage-point is gained from which to attack the other. Going from side to side but gives two difficulties where but one before existed, and in event of prolonged operation, when completion for the patient's sake must be abandoned or postponed, adds additional complication and takes away some of the chances of recovery. Such methods are common to inexperienced workers, and must be abandoned if good results are desired.

Incomplete operations are at the bottom of much of the criticism made as to the uselessness of abdominal or pelvic surgery. When an operator removes but one ovary and tube for hæmorrhage of a fibroid he confesses to the knowing critic his incompetency to deal with the conditions he meets. He is as likely to cure such hæmorrhage by such surgery as to raise chickens from china eggs.

By this it becomes manifest that a lack of resources is fatal to ideal surgery. The surgeon who deserves the name is a man of emergencies. The surgeon in masquerade, like the journeyman actor, tears, not his passion, but his patient to tatters. By every operation so done a certain number of women whom surgery might save are frightened and so hindered from receiving the benefits of real surgery.

The easier operations are the bane of the would-be surgeon. Suceeding in one of these, he imagines he has conquered the whole field and at once rests easy in his assurance. To such men, and their patients generally, absolute failure in their first attempts is a distinct gain, for it frightens them away from the possibility of doing further harm.

Many other points leading to and illustrating the same idea, and showing conclusively where mal-operation and needless operation are most likely to occur, and why, could be multiplied. But this is not necessary. It is plain that that operator only is safe who has

first learned by a long and painstaking apprenticeship, thoroughly and patiently, the principles of the work he is to perform; who, grounding himself in the principles, has applied them at the side of capable instructors; who, when he operates, does so for the patient's good and not for his own glory. Such a man—such men—must both give their patients their best hope and be the saviors of surgery from its false exponents, who only disgrace it.

The men who get the best results are those who work along the safe lines, departing from them as necessity compels according to the exigencies of each individual case; not those who from the threading of a needle to the cleansing of a tube or the washing of their hands strive to be original. Such originality hides real surgery in a multiplicity of details and paraphernalia, and risks the sufferer to exalt the operator.

Society Reports.

PHILADELPHIA COUNTY MEDICAL SOCIETY.

Stated Meeting, May 27, 1891.

The Vice-President, De Forest Willard, M. D., in the Chair.

DR. JOSEPH E. HOFFMAN SUBMITTED A PAPER ON THE RELATION OF IMPERFECT SURGERY TO THE SEQUELÆ OF PELVIC AND ABDOMINAL OPERATIONS.—(See p. 814.)

Dr. M. Price: I am fully in accord with the belief that most of our deaths can be accounted for by some want of care on the part of the operator before, during, or after operation. I recall two cases in which the previous care before the operation had everything to do with the result. In one, the woman was sent into the house to be operated on. The patient declared that the bowels had been freely moved fifteen or sixteen times on that day. The operation was done, and it was found that the patient had not had the bowels opened for two weeks. She had an impermeable stricture, which would permit the passage of nothing but the watery contents of the bowels. The fatal result might have been avoided if the patient had been under the care of a trained nurse before the operation. I have seen this accident twice.

Many men who profess to be abdominal surgeons will go to a case of supposed tumor, or some other condition, prepared to do only that operation. They go to do an ovariotomy and a hysterectomy is required. The result is a death. The surgeon must carry with him everything that can be needed. I have seen many hundreds of abdominal sections, and have seen about as many mistakes as most men, and that, too, in the most competent hands.

As to the success of abdominal surgery. Does any one pretend to say that when a surgeon amputates a leg, giving the patient a useful stump, that is not a success? I hold that it is. If we had subjected an abdominal case to such a risk of life, and had left it in such a crippled condition, what a howl there would be on the part of the medical profession! You take a woman who has been lying around, unable to assist herself in the slightest, and you remove the disease and allow her to move around with some little pain, some little crippling of her gait. You cannot expect to make a perfect cure. Many of the objections, and many of what are called sequelæ are the fault, not of the surgeon, but of the patient's delay.

Dr. G. Betton Massey: The attempt has apparently been made to make an apology for surgery. I think that from some points in view the surgery of the abdominal cavity needs an apology. By some we are told that the bad results are due to improper operations, and by others that they are due to the diseases themselves. I would take no exception to that class of bad results in those cases of abdominal disease incapable of being cured in any other way than by surgery. I have been much impressed with the mistake which is the keynote of Dr. Hoffman's paper—that is, the mistake made by surgeons persuading women to be operated on who do not require any operation. I have seen a number of these patients who, fortunately, have failed to take the advice given by the surgeon. I have now under observation a lady who was persuaded to have the ovaries removed in order that the cervix might be repaired. A little reduction of the congestion and enlargements of the parts in a rather stout patient showed that the whole trouble came from a subinvoluted uterus and a hypoplastic enlargement of one side, which was rapidly improved.

Dr. O. H. Allis: It seems to me that a good deal depends upon who gives the advice whether an operation should be done or not. A patient comes with sarcoma of the jaw, where nothing but the removal of the entire jaw, or at least half, will save life. Although the surgeon urges operation with earnestness, the patient goes away and

nothing is done. The delay is fatal. The same is true in strangulated hernia. The patient should be urged to undergo immediate operation.

Dr. William E. Ashton: The question of hernia following abdominal section is one of great importance. The surgeon who says that he never has a hernia does not follow up his cases. The majority of hernias are due to a failure in properly uniting the sheath of the rectus. I do not believe that fat women are especially liable to this accident. The integrity of the abdominal wall depends entirely upon the sheath of the rectus muscle, and this should be sutured in all cases. I believe, also, that a large number of hernias are due to getting out of bed too soon. The patient should not get up under three weeks. There is not much benefit in an abdominal support. I have found it impossible to keep any bandage closely enough applied to relieve the ordinary strain. If the patient is doing heavy work, an abdominal support may be of service.

In regard to fistula caused by a ligature, I might mention a clever device told to me by a doctor from Texas. He takes a number of horse-hairs, doubles them over upon themselves and ties them together, and passes them into the fistula and turns them around. In this way he often succeeds in bringing away the ligature.

I believe it to be a good plan to have the patient in a hospital, if possible, in order that she may be under observation and control. I do not believe that there is more danger of sepsis in cases operated on at home than in those in hospitals. Sepsis does not come from the atmosphere. Barring the question of control, there is little difference, so far as results are concerned, where we operate.

Dr. J. Price: Dr. Allis has given an interesting point in reference to the selection of cases and the importance of promptitude. The whole experience of abdominal surgeons is in favor of promptitude in pelvic abscess and in small tumors of all kinds. I may say in regard to mortality that if my mortality equalled the number of cases that I find dead when I arrive at the house, I should cease to operate. A man to do abdominal surgery should serve an apprenticeship, not only that he may know what to recognize, but that he may, with specimens in hand, compare them with the histories. With a pair of pus tubes or a pelvic abscess, you can almost demonstrate the number of attacks of pelvic peritonitis that the woman has suffered.

It is very nice to talk about the sequelæ of abdominal sections, but the sequelæ antedate the operation in many cases. I saw today, a large cystoma, probably complicated with fibroid. The patient had been counselled by many not to have the tumor removed. I sometimes wish that the general practitioner and general surgeon were like the eye and ear men—they attend to their business and say nothing about anything else.

Dr. J. M. Baldy: Unquestionably many of the so-called sequelæ occur before the section has been performed. Many, also, are due to incomplete operations. I do not think that any one cause is a fault. I have not found that fistulæ and herniæ are more apt to occur in fat women, nor have I found that suturing of the fascia will prevent it.

In regard to hospitals, I believe in railroading patients into hospitals, if you have well-appointed ones. You have there a better chance to do good work and to watch the patient. Some of my best work, however, has been "alley work," but it has been most anxious work. In these cases I have been forced to permit them to get up in two weeks. In hospitals you can keep the patient in bed. I think that four weeks is not too long.

As to the cause of death, I have seen one death from shock in the hands of another gentleman. I have seen one or two deaths from hæmorrhage, but the one great cause of death is septic peritonitis. In some of these cases I have thought that the tube was at fault, but in others there was no drainage. In regard to early operation, if it is an operative case, the operation cannot be done too soon.

Dr. Charles P. Noble: In regard to the cause of death after abdominal section, I may say that in my own experience the deaths, with two exceptions, were due to the fact that the patient was operated on when she was almost dead from disease. I have had three deaths from kidney trouble. In two the condition was not discovered prior to operation. Serious kidney disease is a positive contra-indication to abdominal section involving any considerable manipulation.

I think that our facilities for managing patients are much better in hospitals than at home, and I think that there is every inducement, both on account of the patient and ourselves, to urge her to go to a hospital.

In reference to cellulitis. Most men who do abdominal surgery say that they never see cellulitis. I have seen it but do not

think that it is a common condition. I do not believe that we meet with it as a non-puerperal condition. Cellulitis in the pelvis occurs as does cellulitis in other parts of the body—from infection. I have knowledge of four abdominal operations in which the tubes were examined and found free from pus accumulations. Of course it was not possible to say that catarrhal salpingitis was not present. Large quantities of pus, however, were evacuated through an incision over the ramus of the pubes. They were undoubted cases of pelvic abscess. I believe that this accounts for the fact that certain women recover and bear children after they have had pelvic inflammation complicating labor.

In regard to drainage, it has become my practice to drain in almost every case, and I have seen no reason to regret it. Unless there is a special reason to the contrary, I drain every case. It is often said that unless the tube is cleaned every half hour to two hours the surgeon does not understand drainage. At the Kensington Hospital for Women there has been a series of as many as sixty cases, with one death, where this principal of drainage was not used. In the last thirty-three cases (without a death) the drainage-tube was not evacuated oftener than three times in twenty-four hours. My experience with the capillary drain, running over one hundred cases, enables me to say that it is a most efficient form of drainage, and that it is the exception, even in bad cases, to find more than a drachm of fluid in the pelvis when the tube is drained. By this measure the pelvis is continually drained.

Dr. Hoffman: While a capillary drain will remove the liquid, it will not remove clots. The syringe will. All that my point stated was that cleaning the drainage-tube once in twelve hours is not cleaning it.

In regard to hospitals, I can control my patients better in their homes. The hospital is not a *sine qua non*, and it is not free from danger.

In speaking of advice in surgery, I did not object to real advice. We, however, compromise ourselves by seeking operations, although those things are done. If an operation is necessary we should say so, and tell why it is. If the patient does not accept it, the result does not lie at our door.

The Bacteriological World is the title of a monthly illustrated magazine for the study of microbes and diseases of bacterial and parasitic origin, edited by Dr. Paul Paquin, of Columbia, Mo.

Dr. W. W. Keen then read a paper entitled:

A FURTHER COMMUNICATION ON A NEW METHOD OF COMPRESSING THE SUBCLAVIAN ARTERY: WITH THE REPORT OF TWO CASES.

He said, I desire to call the attention of the Society to the method which I proposed some time since for controlling the circulation in the upper extremity by elastic compression of the subclavian artery. (*Transactions Philadelphia County Medical Society*, February, 1890.) This, it will be remembered, was effected by a pad over the subclavian, held in place by the ordinary rubber bandage of the Esmarch apparatus; the elastic bandage being carried from the chest over the back, and then alternately between the thighs and in the opposite armpit.

Not long after I made the suggestion I made a trial of it for my friend Dr. Hearn, in the clinic at the Jefferson Medical College Hospital. In this case the application was a failure. The failure, I think, arose from two reasons. First, the man had a very prominent clavicle and a deeply-seated first rib; and, secondly and chiefly, the pad used was the ordinary roller bandage. The conical graduated pad, as suggested by Dr. Parkes below, is far better.

I received a letter from the late Professor Charles T. Parkes, of Chicago, dated Oct. 24, 1890, recording his use of it in another case in which the absolute control of the subclavian was almost a *sine qua non* for the perfect operative procedure, and in which the method, submitted to such a crucial test, succeeded so well that I venture to quote from his letter. I need scarcely point out that all our former methods for controlling the artery would not have given such command of the circulation as to make the deliberate dissection and ligation practised by Dr. Parkes a possibility:

"Allow me to congratulate you on the perfect success of the plan recommended by you for the control of the circulation in the upper extremity. The adoption of it yesterday enabled me to carry to a successful issue an operation for the relief of an immense traumatic aneurism of the axillary space, following a laceration of the axillary artery by a bullet from a heavy 45-caliber revolver. After the application of the rubber band in the manner you recommend with a compress over the subclavian artery, I laid the aneurism wide open, cleaned out all the clots, and finally found a large tear in the artery, and applied a ligature above and

below it without the patient losing any blood. Twelve hours after the operation circulation was so far restored in the limb as to make a successful termination almost certain. I attribute the ease and readiness with which the difficult procedure was accomplished, to the perfect control of the circulation permitted by the adoption of your plan. It is certainly of great value. If an amputation at the shoulder-joint had been required it could have been without the loss of a drachm of blood.

"No more trying test could be given to the method than the case in which I used it. A traumatic aneurism in the axillary space from a large wound in the artery is certainly one of the most difficult things we have to deal with. The application of the bandage in this case enabled me to work deliberately and with perfect ease. No motion on the patient's part can displace it.

"I think the character of the pad used under the bandage and over the artery has much to do with the success of the method. This pad should be somewhat in the nature of a graduated compress, small enough at its apex into the interval between the clavicle and the first rib, and yet thick enough and firm enough to reach well above the clavicle and the side of the neck, so as to take all the pressure off the rubber."

To answer this purpose I have had made a wooden pad, the bevelling of the top is for the purpose of enabling the rubber bandage to hold it in place and prevent its slipping either inward or outward. There are two holes at the sides and end for a removable handle, resembling a two-pronged fork, with which to hold it while applying it.

I have tried a similar but larger pad for the iliac arteries, but so far its experimental use has not been satisfactory.

DISCUSSION.

Dr. Miller: We are certainly indebted to Dr. Keen for his valuable contribution to the technique of operations in which the subclavian artery is concerned. It often happens that while under ether the patient is difficult to manage or vomiting occurs, and then there is liability of displacement of the key if we rely upon that to control the hæmorrhage. Several years ago I amputated at the shoulder-joint in a very muscular man. The patient began to struggle, and there was considerable difficulty in controlling the artery. In that case I should have been much more comfortable had I had the apparatus deseribed by Dr. Keen.

I noticed that the subject on whom Dr. Keen demonstrated the application of the apparatus expressed considerable pain. This is probably due to the length of the pad, which pressed upon some branches of the brachial plexus. If this pressure were continued for twenty minutes it might lead to considerable injury.

Dr. O. H. Allis: The one to whom the care of the artery is given in these operations about the shoulder-joint has no enviable position. I do not know when I have been more alarmed during a surgical operation than when I assisted a friend in amputating at the shoulder-joint. It was my duty to control the artery. I passed my thumbs underneath the flap, and as he cut the muscles they contracted so forcibly that it was with difficulty that I controlled the vessel. In compressing the artery to-night Professor Keen probably used more force than was necessary, and this will probably account for the pain.

Dr. A. Hewson: I should like to ask Dr. Keen, in reference to the effect of motion of the vertebral column on the apparatus. Would not this interfere? I have this evening seen a friend compress his own axillary artery so as to stop the radial pulse. The pressure seems to be made by the lower part of the trapezius muscle acting on the spines of the scapulæ, and the latissimus dorsi on humerii, the humerii being rotated inward and drawn downward and backward. The individual was a spare medical man, and locking his hands behind him and then straightening the whole upper extremities, he was able to prevent pulsation in the radial arteries.

Dr. Keen: This is the first time that I have seen pain caused by the application of this apparatus. I think that the pressure was too great. It is possible that India-rubber would be better than ebony.

I do not see how movements of the spinal column or of the clavicle would have anything to do with the position of the pad, which presses directly on the first rib.

I have never seen a case like the one detailed by Dr. Hewson, and should not have thought it possible that the artery could be controlled in this way if I had not his testimony to that effect.

Dr. John B. Roberts reported, a

CASE OF EXOSTOSIS OF HUMERUS SIMULATING AXILLARY DISLOCATION.

He said, there is nothing especially interesting about the patient, whose photograph he presented, except the situation of the bony growth.

The boy, who is about eight years old, fell from a pair of steps, and struck upon his shoulders. As he was supposed to be hurt, his clothing was removed, and the condition shown in the photograph observed. The physician who first saw him at once took it for granted that the deformity was due to the fall, and that an axillary dislocation existed. He made unsuccessful attempts to reduce the supposed luxation. Shortly afterward he examined the boy, and found that the prominence, mistaken for a displaced head of the humerus, was an exostis situated at about the epiphyseal line, between the shaft and the head. This, curiously, had never been noticed before by the child or his parents.

Some weeks subsequently he removed the little tumor by means of chisels, and found it to be cancellated bone partly covered by cartilage. The wound healed promptly under the usual antiseptic treatment.

It is needless to say that the symptoms of dislocation were absent, except that there was a rounded mass of bone to be seen and felt in about the situation occupied by the humeral head in subcoracoid luxation.

Selected Formulæ.

NASAL DIPTHERIA.

Raulin recommends that the membrane be detached by antiseptic irrigation and the raw surfaces covered with the following:

℞

Lactic acid	gr. xxx.
Carbolic acid	gr. xlv.
Pure glycerine	ʒ i

—Revue Gén de Clin. et de Thérap.

OINTMENT FOR INTERTRIGO.

℞

Boric acid	7 grains.
Lanolin	12 drachms.
Vaseline	3 "

This ointment is to be applied to the diseased area, which is first cleaned by the use of a mild soap.

CROUP.

J. B. Johnson uses the following:

℞

Aquæ destillat	f ʒ i.
Potass chlorat	
Potass iodid	aa ʒ i.
Emuls. arabicæ	ʒ ij.
Mucilag. acaciæ	
Ext. ipecac., fl	
Olei capaibæ	aa ʒ i. M.

S. Shake well. Dose, a teaspoonful every ten minutes, to an infant of 8 months, till free vomiting ensues; and then continue the same dose every half hour or hour until the disease is cured. The dose must be given according to the age of the child.

—New England Med. Monthly, 1891.

WHOOPING COUGH.

℞

Terpin	gr. xv.
Antipyrine	gr. xv.
Syrup aurant. cort	ʒj ʒvj.
Mucil. acac	ʒij.

M. Sig. ʒj to ʒij several times a day for a child under four.

—Talaman, Times and Register.

MIXTURE FOR DISSOLVING DIPTHERITIC MEMBRANES.

Caldwell is stated by the *Medical News* to recommend the following solution for this purpose:

℞

Papain	ʒijss.
Hydronaphthol	grs. ij.
Acid muriatic	gtt. xv.
Aq. destillat	ʒiij.
Glycerini	ʒij.

M. Sig. Apply to the affected parts every half hour by means of an atomizer.

DIARRHŒA.

℞

Tr. opii camph	ʒ j.
Mistura cretæ	ʒiij.
Ol. menthæ pip	*Mx.*

A teaspoonful for an adult every three hours until diarrhœa is checked. For infants the following prescription will be more appropriate and more easily retained on the stomach:

℞

Vin. Pepsini	ʒ ij.
Bismuth subnitratis	ʒiij.
Glycerini	ʒj.
Aquæ	ʒiv.

Give one drachm at a dose every two or three hours.

LARYNGITIS.

Moure recommends the following to be used in the treatment of laryngitis:

℞

Crystallized carb. acid	gr. vij—xv.
Hydrochlorate of cocaine	gr. vij.
Opium	ʒ jss.
Distilled water	ʒx

This may be applied by means of a brush three times a day, or

℞

Boric acid	ʒj.
Crystallized resorcin	ʒss.
Cherry-laurel water	ʒjss.
Distilled water	ʒx.

This mixture may be used in an atomizer for from three to five minutes morning and night, or three or four times a day, if the condition of the throat is subacutely affected. *—La Tribune Médicale.*

BED SORES.

Prof. Rosenbach recommends that lanoline be rubbed into the red spots indicating an impending bed sore. He has had unvarying success with it.—*Pacific Medical Journal.*

CREOLIN IN ACUTE GASTRO-ENTERITIS.

Schwinz has employed this drug with success in the following formula:

℞ Creolin.....*M* iij.
Syrup althæa.....f ʒ v.
Aq. cinnamonii, q. s., ad.....f ʒiij. M.
S. To a very young child a small teaspoonful hourly. To older children the drug may be given in a powder.

℞ Creolin.....*M* xv.
Sacchari alb.....gr. lxxv. M.
Divide in Chart No. X.
S. One or two powders daily.

—*Wiener Medizinische Wochenschrift*, No. 3, 1891.

DYSENTERY.

Rossbach employs naphthalin in the following manner in this condition:

℞ Naphthalin.....grs. x.
Boiling water..... ʒ iv.
Decoction of marshmallow..... O j.

This is to be used as an injection at the temperature of 100°. In children who suffer from diarrhœa dependent upon the presence of parasites in the lower bowel, the quantity of naphthalin which is employed should not be more that 15 grains in 4 ounces of oil.

COCAINE FOR PAINFUL TEETHING.

℞ Cocaine hydrochlorate.....1½ grs.
Syrup.....2 fl. ʒ.
Tinctute of conium.....20 gtts.
M. Sig. To be rubbed on the gums several times a day.

—*Merck's Bulletin.*

BETOL AS AN INTESTINAL ANTISEPTIC.

M. Yvon states that betol or naphtalol or salinaphtol is valuable in children's diseases where an intestinal antiseptic is indicated. As is well-known betol is a salicylate of naphtol. The following is a good formula in cases of the character mentioned above:

℞ Betol.....gr. xv.
Syr. aurant flor.....ʒj.
Aquæ acaciæ.....ʒ v.
M. Sig. In dessertspoonful doses.

The total amount above given may be taken in twenty-four hours. The betol may also be given alone in milk in the doses indicated above. As the taste is very slight it is not difficult to administer.

TREATMENT OF ECZEMA.

I should like to call the attention of the profession to the value of a method of treating certain cases of eczema. It has been highly lauded by Prof. Unna, and my attention was called to it by a friend, Dr. D. W. Montgomery, whom I called in consultation for a case of eczema equamosa of both lower legs, attended with terrible and uncontrollable itching. The pruritus was of such a character as to resist all the ordinary treatment, and it was rapidly breaking down the patient's strength. In a very short time after using the formula given below, a most marked change took place in the troublesome symptom, and in fact the disease is being conquered:

℞ Gelatine.....ʒ iv.
Zinc. oxide.....ʒ ijss.
Glycerine.....ʒ ss.
Aquæ.....ʒ vj.

Heat the water, and dissolve in it the gelatine, then add the glycerine and zinc, stirring until cold.

This makes a stiff jelly. When used it is to be heated sufficiently so that it may be painted with a small varnish brush all over the affected parts, and a thin layer of cotton placed over it at once. This acts like a protecting scab which the patient is unable to tear off with the finger-nails; in fact it has such a soothing effect that the desire to scratch is of little moment.

It is quite unnecessary to say that the general health received due attention. The purpose of this correspondence is to call attention to the treatment.—*Dr. C. C. Vanderbeck, in Pac. Med. Jour.*

WARTS.

℞ Hydrarg. chlor. corros..... 1 part.
Collodion.....30 parts. M.
S. Apply once daily about the base of the wart.

—*Cincinnati Lancet-Clinic*, February 21, 1891.

AN EXCELLENT HAIR TONIC.

℞ Acid carbolic.....ʒ ss.
Tinct. nucis vom.....ʒ ij.
Tinct. cinchonæ rubræ.....ʒ j.
Tinct. cantharidis.....ʒ ss.
Aq. coloniensis / Ol cocao } .....q. s., ad. ʒ iv.
M. Sig. Apply once or twice a day to the scalp by means of a soft sponge. This will prevent the hair from falling out if it does not produce a luxuriant crop.

HANSON'S MAGIC CORN CURE.

A good corn cure that is similar in every respect to Hanson's Magic Corn Cure is made by taking of—

℞ Simple cerate.....1 oz.
Salicylic acid.....1 dr.
Mix intimately.

—*Indiana Pharmacist.*

THE
MEDICAL AND SURGICAL
REPORTER.

ISSUED EVERY SATURDAY.

EDWARD T. REICHERT, M. D.,
PROFESSOR OF PHYSIOLOGY, UNIVERSITY OF PENNA.,
EDITOR AND MANAGER.

N. E. Cor. 13th and Walnut Streets,
P. O. Box 843. Philadelphia, Pa.

THE MEDICAL AND SURGICAL REPORTER.

TERMS: Five dollars a year, strictly in advance, unless otherwise specifically agreed upon. Sent 3 months on trial for $1.

At the termination of the period of subscription, we will promptly discontinue sending THE REPORTER unless directed to the contrary by the subscriber.

Remittances should be made by draft, check, postal note, or money order payable to Edward T. Reichert.

THE POCKET RECORD AND VISITING LIST.

Two sizes. Prices to subscribers of THE REPORTER: For 30 patients a week (with or without dates), $1.00. For 60 patients a week (without dates), . . $1.25. Prices to non-subscribers, $1.25 and $1.50 respectively.

THE MODEL LEDGER.

Physicians who keep their own books will find this of great value. Sample pages sent on application. Price, $5.00.

☞SUGGESTIONS TO SUBSCRIBERS:

See that your address-label gives the date to which your subscription is paid.

In requesting a change of address, give the old address as well as the new one.

If THE REPORTER does not reach you promptly and regularly, notify the publisher *at once*, so that the cause may be discovered and corrected.

☞SUGGESTIONS TO CONTRIBUTORS AND CORRESPONDENTS.

Write in ink.

Write on one side of paper only.

Write on foolscap or legalcap paper.

Make as few paragraphs as possible. Punctuate carefully. Do not abbreviate or omit words like "the" and "a," or "an."

Make communications as short as possible.

NEVER ROLL A MANUSCRIPT! Try to get an envelope or wrapper which will fit it.

When it is desired to call our attention to something in a newspaper, mark the passage boldly with a colored pencil, and write on the wrapper "Marked copy." Unless this is done, newspapers are not looked at.

The Editor will be pleased to get medical news, but it is important that brevity and actual interest shall characterize communications intended for publication.

LEADING ARTICLE.

IN THE PREPARATION OF SPONGES FOR SURGICAL USES, WHICH IS THE SAFEST STERILIZING FLUID: A SOLUTION OF CARBOLIC ACID OR ONE OF CORROSIVE SUBLIMATE?

The surgery of to-day demands the most rigid antiseptic precautions to be taken, even in matters of minor moments; consequently the subject under discussion is well worthy of consideration.

Few of the ordinary needs of a surgical operation are in more general and frequent requisition than sponges. No other substance possesses in itself all the physical qualities of a sponge; and, therefore, there is no known article that, from a surgical standpoint, can take its place. Such being the case, it is essential that the utmost care and attention be given by the operator to their preparation and purification.

The meshes of a sponge can readily become a lodging place for septic germs, and it behooves the surgeon to be on the alert less he infects his patient by one which is poorly disinfected.

In the present article we shall have nothing to say about the routine preparation of sponges for the market; nor of their purification for surgical use—up to the point when they are ready for immersion and preservation in the solutions of carbolic acid or of bichloride of mercury. We will take it for granted, for the purposes of discussion, that they have been carefully prepared thus far, and will now occupy ourselves with the consideration of the subject of this article, viz.: the relative value of the sterilizing qualities of the two antiseptics upon sponges.

In a recent article "On Sponges and their use in Surgery," (*Annals of Surgery,*) A. Ernest Waylard, M. B., of Glasgow, details some interesting experiments which he made upon this subject. We will record the gist of these experimental tests, with their results:

Experiment One:—Two new sponges—a Cuban wool, (which is an open textured sponge) and a Cuban fine, (which is a close

or dense textured sponge) were thoroughly rinsed in hot water and then placed in a solution of carbolic acid (1 to 40) and kept there over night. The following morning the fluid was changed. Each of the sponges was now squeezed by the hand as free as possible of the carbolic solution, and then divided by a sterilized pair of scissors. From the center of the sponges so divided, small pieces were removed by another pair of sterilized scissors, and separately inserted into tubes of Koch's beef-peptone jelly, previously liquified. The tubes—two of each specimen— were placed in the incubator and left at a temperature of 37° C. for forty-eight hours. Examination of the contents of the tubes at the expiration of this time showed a muddy appearance of the two, containing the dense or close textured sponge, while those containing pieces from the open textured one, were quite clear. A microscopical examination of the muddy jellies showed them to be loaded with microbes.

Thus experimentally, the author shows that 12 to 18 hours immersion in a 1 to 40 solution of carbolic acid had not asepticised the close textured sponges, but apparently had done so in the case of the open textured ones—although in each instance the sponges had been prepared with considerable care and with every intention that they should be clean, and after sterilization, fit for surgical use.

Experiment Two :—The above experiment was repeated, except that the preparation of the sponges was attended to by Mr. Waylard. After this had been done, the two sponges were placed in 1 to 40 carbolic solution, where they were allowed to remain twenty-four hours. Each sponge was then divided and pieces removed from the centers and placed in jelly tubes, in the same manner as in the first experiment. The tubes were now placed in the incubator, where they were left for forty-eight hours. Development of microbes took place in the tubes containing the pieces from the dense textured sponge, but none appeared in those containing pieces from the open textured one.

Experiment Three :—The above experiment was repeated, only this time with pieces of the dense textured sponge above, and with the same result—an extensive development of microbes: rapidly in those placed in the incubator and more slowly in those left in the room at the ordinary temperature.

The author states that these experiments seem to prove, with little room for doubt, the inefficiency of solutions of carbolic acid of a strength of 1 to 40, to sterilize the central part of close textured sponges.

This failure on the part of carbolic acid led me to try the sterilizing power of solutions of bichloride of mercury. The principal reasons for not testing stronger solutions of the acid was that sponges used direct from such solutions would be inconvenient, if not sometimes harmful; and at all times an expensive procedure from the quantity of solutions required.

Since the experimentor's object, therefore, was a practical one, he made use of solutions that could be used in large quantities, and for this purpose choose a 1 to 2,000 solution of bichloride of mercury such as is in common and constant use in surgical practice.

Experiment Four :—The Cuban fine or dense textured sponges were alone used. The sponges were prepared as in former instances. They were then placed for twenty-four hours in the solution of mercury, at the end of which time pieces were removed from their centers and inserted in jelly-tubes as before. Two tubes were placed in the incubator and two in the room. No development of microbes occurred at any time in either set of tubes. Thus it appeared that the mercury solutions had succeeded, where the carbolic acid had failed.

For the purposes of testing more surely the relative sterilizing power of the two solutions—bichloride of mercury and carbolic acid—and to eliminate a possible objection against the last experiment, that no control had been made and that therefore the sponges may have been aseptic from the first, the following experiment was performed:

Experiment Five :—A Cuban fine sponge was placed immediately over the orifice of a

discharging sinus, situated in the thigh of a patient suffering from necrosis of the femur. When removed from the wound on the following day, it contained a quantity of excessively fœted pus. The sponge was placed in a glass receptacle and kept until the following day, and when then exposed its odor was about as bad as it well could be. The sponge was now taken from the jar, rinsed and squeezed several times in hot water. After this washing it still maintained an offensive smell, which was especially marked in the center of the sponge, after it had been divided.

Each half was now placed into a separate jar, the one containing a solution of carbolic acid of a strength of 1 to 40, the other in a solution of bichloride of mercury of a strength 1 in 2,000. They were left in these solutions for eighteen hours, at the expiration of which time tube cultivations were made in the manner already described in former experiments. Two tubes of each were placed in the incubator. On the following day the two tubes containing the carbolized fragments had each a dense opaque scum upon their surfaces, while the two tubes containing the mecurialized fragments were perfectly clear.

The practical deductions to be drawn from these experiments are:

1. That a solution of the bichloride of mercury is the safer, and, therefore, the better sterilizing medicine for sponges. It is, also, the cheaper drug.

2. That sponges with open, somewhat coarse nestwork, are least likely to be septic from causes connected with their preparation.

3. That large sponges and thick, dense ones, should be prepared with special care, especially after contact with fœted pus or other infected substances.

CORRESPONDENCE.

To the Editor.

Dear Sir:—Your editorial on Curetting the Uterus in Puerperal Fever, draws attention to an ever interesting subject. While all will agree in the main with the authorities referred to in your article, it seems to me that in some respects the teachings inculcated can be modified or added to with advantage. I wish to speak of several practical aspects of the subject.

Some years ago, in the capacity of Assistant at the Philadelphia Lying-in Charity, I had the opportunity of studying a series of cases of puerperal septicæmia. My observation would lead me to believe that the proportion of cases dying within twenty-four hours of the onset of the disease is small. I have seen but one such case—a woman having a contracted pelvis who was delivered by the high forceps operation. In this case there is reason to believe that infection was introduced within the cavity of the uterus. In all other cases coming under my notice I have been impressed with the fact that the observant physician will find symptoms to warn him of the impending danger, and enable him to institute treatment before the life of the woman is endangered by the progress of the local inflammation, or the system is poisoned by the absorption of septic material. This point cannot be insisted upon too strongly; and broadly speaking, the obstetrician who recognizes septicæmia in his patient only after it has progressed to its full development must be considered culpable, not only for the existence of the malady, but for negligence or incompetence in failing to recognize its early manifestations. The physician who daily palpates the hypogastrium and notes the progressive involution of the uterus, who watches the functions of the bladder, who notes the state of the lochia, and who carefully observes the state of the pulse and temperature will almost never be confronted without warning with a full blown puerperal septicæmia.

With reference to the thoroughness with which the curette will remove septic material from the uterus, I am disposed to differ with Braun. Cases are on record in which careful men have curetted the uterus to remove the supposed remnants of a miscarriage, in which, after this supposed emptying of the uterus an abortion, fœtus and all, has occurred. So experienced a man as Goodell absolutely rejects the curette for the removal of particles of placenta, and holds that it is impossible to determine the absence of foreign bodies in the uterus by the use of the curette. Were it necessary it would be easy to collect positive proof that the curette cannot be depended upon to do what is claimed by Braun and Fritsch. The only way to determine whether the puerperal uterus is

empty is to introduce the index finger to the fundus, under anæsthesia. If no small fragments of placenta are present, the use of the curette will remove the infected, softened decidua.

Anæsthesia, necessary for the proper examination of the puerperal uterus, will greatly facilitate the subsequent curetting. My own experience warrants me in doubting whether American women will consider the procedure comparatively painless, as claimed by Braun.

Again, in ordinary cases of labor the cavity of the uterus is not invaded by the fingers or instruments of the attendant. Hence, when septicæmia results, the processes usually have their origin in the vagina, and when treatment is instituted promptly, the uterus may escape infection.

It seems to me that if the principles of asepsis and antisepsis were fully appreciated by the practitioner that puerperal sepsis would be encountered but seldom in private practice. It is now well ascertained that puerperal septicæmia is caused by the introduction by the physician or by the nurse of septic germs within the genitals of the puerpera, at the time of or shortly after labor, or it is caused by the activity of germs already present within the vagina at the time of labor.

It has been positively proved that the vagina swarms with germs. Inasmuch as they do no harm as a rule, it may be assumed, until our information is more definite, that under ordinary conditions the germs present are non-pathogenetic. But when vaginitis, with an imitating leucorrhœa is present, we may well question the innocence of the germs. It has been a rule in my practice for a long time to question women in the latter months of pregnancy, as to the existence of vaginitis, and when there has been the least reason to suspect it, an examination has been insisted upon and the vaginitis vigorously treated with suppositories of alum and irrigations with alum, and with sublimate solutions. No one who is at all familiar with modern bacteriology will expect to disinfect such a vagina by giving a sublimate douche at the beginning of labor. Hospital experience apparently has shown that the routine use of vaginal antiseptic douches at the beginning of labor is to be avoided. It will be interesting to watch this point in practice in the future, influenced as it will be by more definite knowledge concerning the efficient use of germicide. Undoubtedly, in the past, asepsis of the vagina has not been obtained.

Practically, the most important point—although every step is important—in obstetrical antisepsis is to secure asepsis of the hand of the physician. My views upon that point can be found in The Reporter for February 28, 1891. The reason why many men do not employ rigid methods for cleaniug the hands is that certain practitioners of large experience have not done so, and yet have not had sepsis in their practice. Doubtless these men have been cleanly in their person, and their work has not brought their fingers in contact with septic matter. But let such men dress erisipelatous wounds, or wounds discharging pus!

Lard, as commonly used, has kept many a woman from puerperal sepsis, by covering over the germs on her physician's fingers; but after all it is a frail banner of defence. Should it be depended upon by the conscientious physician, when five minutes use of the nail brush, with soap and water, especial attention being given to the examining finger, followed by a sublimate, both for three minutes, will go so far to ensure his patient against the dreaded "child-bed fever?" Very Respectfully Yours,

Charles P. Noble,
Philadelphia.

Book Reviews.

STUDIES OF OLD CASE-BOOKS. By Sir James Paget, Bart. London: Longmans, Green & Co., 1891. Philada.: Blakiston & Co.

If we could imagine a physician ignorant enough not to be acquainted with the writings of the eminent surgeon and teacher—Sir James Paget, F. R. C. S., and surgeon to St. Bartholomew's Hospital—we might suppose that the title, "*Studies of old case-books,*" would give to such an one the impression that the present volume was a mere recital of dry cases used as a basis for a book and of no practical interest to the general practitioner.

To one, however, at all familiar with this writer's versatility, sound judgment, quick perception, and, above all, his power of imparting to others the knowledge he has gained by years of observation and study, the book is picked up and perused with evident pleasure, with an assurance to the average reader, that as each page is scanned information has been gained.

The volume is replete with so much knowledge and so many practical suggestions that to do justice to a review we would be obliged to extend our remarks beyond the

limit of the space at our command. We, therefore, content ourselves with saying that we have read through the seventeen chapters comprising the book without losing, for a single instant, the interest awakened at the beginning.

In conclusion, we would add that the busy physician will find in "Studies of old case-books," several hours of pleasant and profitable reading.

SAUNDERS'S QUESTION COMPENDS. ESSENTIALS OF PHARMACY. By Lucius E. Sayre, Ph. G., Professor of Pharmacy, and Materia Medica, of the School of Pharmacy of the University of Kansas. Phila.: W. B. Saunders, 1890.

The writer of this epitome of chemistry, pharmaceutical and practical, deserves credit for having embraced in one small volume so much which is necessarily frequently referred to by physicians in general practice. Of course the book is specially intended to aid the students in craming for examination, but as the majority of medical institutions are not at present insisting upon such a preparation in pharmacy, as a careful study of this compend would impart, it is probable that a large portion of its usefulness will consist in its being a handy-book for the general practitioner, who can readily find any ordinary question clearly answered. The work is arranged in the form of questions and answers. The questions are printed with bold-faced type, and the book is finished in the neat manner which characterizes this series of quiz-books. Besides definitions of the terms in pharmacy, and a thorough "quiz" upon the mode of preparation of all the various officinal mixtures, the book also contains a complete review of all the substances ordinarily used in medicine, as well as much pure chemical knowledge.

TREATMENT OF AMENORRHŒA.

℞

Bichloride of mercury	3 grains.
Arsenite of sodium	3 "
Sulphate of strychnine	1½ "
Carbonate of potassium, Sulphate of iron	of each, 45 "

Make into sixty pills and give one pill after each meal.

THERAPEUTICS.

TREATMENT OF PNEUMONIA WITH LARGE DOSES OF DIGITALIS.

At the last International Medical Congress Professor Petresco of Bucharest read a paper on this subject. He makes an infusion of sixty grains of powdered digitalis leaves to six ounces of water, a little syrup of orange being added to sweeten it. A tablespoonful of this mixture is given every half hour. In spite of the largeness of the dose, he says that he has never met with a case of poisoning, and maintains that these doses are therapeutic, and not toxic. The best results are obtained in fibrinous or croupous pneumonia. The author states that if used in the way he describes digitalis will frequently cut short an attack of true croupous pneumonia. In from twenty-four to forty-eight hours after taking the drug a certain fall of temperature occurred, from 104°F. to 98°F.; this being accompanied by a decrease in the frequency of the pulse and respiration. The digestive tract was little affected. The most marked changes were noticed in the pulse, which became slow, full, and of high tension. The conclusions to which Professor Petresco has come are published in the *Therapeutische Monatshefte*, Feb. 1891. They are as follows: 1. When given in therapeutic doses digitalis has a direct antiphlogistic action. 2. The dose may be raised as high as from 60 to 120 grains of the leaves given as an infusion within twenty-four hours. 3. This treatment may be continued for from two to four days if the severity of the case requires it. 4. When improvement takes place in the circulation and respiration, this is speedily followed by a disappearance of all local signs and symptoms. 5. The success of this treatment is confirmed by the statistics. In an elaborate table of statistics Professor Petresco shows the superiority of digitalis over the other methods. Thus the highest mortality in pneumonia (34·5 per cent.) occurred when bleeding was practised, and the lowest (3 per cent.) when tonics, alcohol, &c., were employed. When digitalis, however, was administered the mortality sank as low as 2·06 per cent. 6. From an experience of a very great number of cases, both of his own and of other medical men, he maintains that the doses, as given above, are perfectly harmless. 7. After a comparison of the various methods of treating pneumonia, Professor

Petresco affirms that the expectant plan is not only without reasonable foundation, but even dangerous; and his experience has demonstrated that an attack of pneumonia may be aborted if the treatment is commenced at the very earliest stages of the disease.—*Lancet.*

THE ACTION OF COCAINE ON THE CIRCULATION.

Dr. Edward T. Reichert, in the *American Lancet*, from a careful study of the actions of cocaine on the circulation in animals, deduced the following conclusions:

1. The discrepancies in the testimony offered by different experimenters, in their investigations of the action of cocaine on the circulation, are almost wholly due to variations in the absolute doses employed, and to the individual susceptibility of the animals.

2. The minimal fatal dose, when injected intravenously in divided doses in the form of a one per cent. solution, varies from 0.004 to 0.03 gramme to the kilo of the body weight. Owing to the great differences in the sensitiveness of different dogs to the poison, a moderate dose in one animal might prove a small or a large one in another of similar weight.

3. When the full train of effects on the heart-beat is slowly developed by the repeated injection of very small doses (0.001 gramme to the kilo of body weight) the pulse-rate is at first decreased, then increased, and finally decreaseed. A single very small dose causes a decrease, a small to a moderate dose an increase; large doses a transient decrease followed by an increase; very large doses a more or less permanent decrease. The primary decrease which only can be developed by very small doses, is due to a stimulation of the cardio-inhibitory centres; the secondary increase to a depression of the same centres, and which may be assisted by a similar action on the cardio-inhibitory peripheries; and the final decrease to a depression either of the accelerator or automatic motor-ganglion in the heart. The height of the pulse-curves during these changes is always in inverse relation to the frequency of the beat.

4. The cardio-inhibitory centres are invariably affected, being primarily stimulated, and secondarily depressed; but the action on the peripheries is of a very inconstant character, although a primary stimulant action is never manifest, the depressant action is sometimes present to a profound degree very early in the poisoning, and, at others, absolutely absent up to the time of death.

5. The arterial pressure is always increased, unless it be after large doses, when it may temporarily be diminished, followed by a rise above the normal; or after very large doses, be permanently lowered. The increase may be decided long after the development of the third stage of the actions on the heart, and, therefore, may outlast the period of the acceleration of the heart's beat. The increase is chiefly due to a stimulation of the vaso-motor centres in the medulla oblongata; to a slight stimulation direct of the vessel-walls; and to the acceleration of the pulse. The final fall of pressure is chiefly dependent upon a depression of the heart, and partly to vaso-motor depression.

6. The effects of cocaine in normal and curarized animals are identical, unless, in the latter, the curare has been used to excess.

7. Cocaine is a decided circulatory stimulant.

TREATMENT OF THE NIGHT SWEATS OF PHTHISIS.

Huchard reports in the *Rev. Gén. de Clin. et de Thérap.*, February 4th, the results with many medicaments tried for the relief of the sweating of phthisical patients. Among these may be mentioned lead acetate, tannin, phosphate of lime, ergot, atropine, and muscarine. Of these the two first are unreliable, and are seldom used, and probably atropine sulphate is the most valuable (one-half to one milligramme at night). Phosphate of lime should be given in large doses (one to two drachms daily) to produce anhidrotic effects, and even in these doses it has several times failed. Ergot (fifteen to twenty-two grains of the powder at night) is much more reliable. When the sweats co-exist with more or less marked fever, the author recommends the use of quinine combined with ergot.

℞ Quinæ sulph.....gr. xvi.
Pulv. ergotæ..... 5 ss.
Divide into four cachets—two or three to be taken daily.

This formula is specially valuable in phthsis with hæmoptysis. Lastly, powdered agaric is an excellent remedy, not equal to atropine, but parfectly harmless, and never causing derangement of digestion. It may well be combined with tannin or belladonna, given in doses of three or four grains.

The same writer speaks very highly of antipyrin in the initial fever of tuberculous patients. The older drugs, quinine, tartar emetic, salicylic acid, all fail, or have but

slight effect. It is specially in this *initial* fever that antipyrin is of great service. One must, however, distinguish between an *analgesic* and an *antipyretic* dose of the drug. To obtain the former effect, one would give a large dose (say fifteen to thirty grains) in a short time, but this must not be done if its best action as an antipyretic is desired. It is well for this purpose to use constantly decreasing doses (say sixteen grains, twelve grains, eight grains), taken care to divide them so that at no time during the twenty-four hours is the patient not under the influence of the drug. Used in this way, Huchard declares that antipyrin seems to have a *special* action on the tuberculous lesion, and to greatly retard or to arrest its progress.

Professor Combemale has used tellurate of sodium, in phthisical and other sweating. It was first recommended by Neusser who gave one-third or two-thirds of a grain in pill once daily. Combemale gave it up to nearly one grain per dose, and tried its effects in eleven cases. His conclusions are: It is a powerful anti-sudorific; a dose of nearly one grain gives rise to digestive troubles, and especially to a strong garlic odor in the breath. All the compounds of tellurium cause a very disagreeable odor in the breath, and this must always be a bar to their employment, as it is very persistent and disagreeable.

In addition to the list sulphonal has been used with success by a few reporters.—*Bost. Med. and Surg. Jour.*

VARIATIONS IN THE CAUSTIC ACTION OF CARBOLIC ACID.

It is claimed on the authority of Dr. Charles that carbolic acid, if dissolved in glycerine or alcohol is not caustic, whatever be the degree of concentration. An aqueous solution or even a small per ceut. of water added to the alcohol or glycerine solution will act as a caustic to the skin and mucous membrane.—*Le Bul. Med.; Weekly Med. Review.*

PIPERAZIDINE AS A SOLVENT FOR URIC ACID.

It is stated in a German pharmaceutical journal that piperazidine dissolves urid acid more readily than any other substance of a basic nature. Urate of lithia requires 368 times its own weight of water to dissolve it, but urate of piperazidine dissolves in fifty times its weight of water. It may therefore be expected that this drug will become a fashionable, let us hope too an efficient, remedy in gout and allied diseases.—*Lancet.*

TREATMENT OF HYPERPHORIA.

Dr. H. F. Hansell (*American Journal of the Medical Sciences*) says:

That hyperphoria is a real affection, and that, while it may exist without causing symptoms, it is in some cases of the highest importance:

That it may produce reflex disturbances in an oversensitive or exhausted system:

That reflex functional disorders are found in patients with hyperphoria, which are not caused by hyperphoria:

That it is not dependent upon errors of refraction:

That it should be sought for in every case of asthenopia:

That the degree can be determined only after repeated examinations:

That tenotomy, and not prisms, is the treatment for hyperphoria:

That in most cases the tendons should be completely divided.

Of the six cases reported above, two presented symptoms of hyperphoria when no want of equilibrium of the verticle muscles could be detected; one had hyperphoria with asthenopia, which was entirely relieved by the correction of the refractive error. Three had local and reflex symptoms due to hyperphoria, and were cured by tenotomies.

It may be objected that the cases are too few to enable one te deduce therefrom laws for general acceptance. No such deductions are made. Nothing more has been attempted than a truthful recital of the histories and a careful observation of the points presented to my own mind. They furnish so much data from which the reader may form his own opinion and draw his own deductions. The subject is new, attractive and important, and deserves more partial investigation and study than it has hitherto received.

THE ACTION OF SACCHARINE ON THE HEART.

Loutzensko has studied the action of saccharine upon the heart of the frog, and finds that when 1½ grains of a two-per-cent. solution of saccharine with bicarbonate of sodium is injected into a frog the animal in one hour appears to be better. It is insensible to the touch, but pinchings provoke feeble reflexes. The heart is finally arrested in diastole, but if pinched will once more begin to contract. Electrical stimulation also produces these contractions of the heart. In doses twice or thrice as large as that named, Loutzensko found that saccharine causes irregular cardiac movements.

The effect of the drug upon the vagus nerve after such doses is very feeble.—*Revue Général de Clinique et de Thérapeutique.*

THALLIN.

Thallin is an oily liquid, perchloride of iron imparts to it an emerald green color. The following salts are known: Sulphate of thallin, tartrate of thallin, and hydrochlorate of thallin. Concentrated solutions have a bitter, salty, and piquant taste. The weaker solutions have an aromatic and agreeable taste. The sulphate is soluble in five times its weight of water, and the tartrate in ten times its weight of water. The salts have marked antiseptic properties, since they retard the fermentative processes of ammonia and alcohol, and also of milk.

Therapeutic properties:—The sulphate is the most active. It may be employed with advantage in solution as an injection in cystitis. It is also given internally as an antipyretic. By its use, in nearly 100 cases of various fevers, including intermittant fever, rheumatic fever, measles, erysipelas, fever during the puerperim, pneumonia, and tuberculosis. Dr. Jacksch, reports (in the *Journal de Méd. de Paris*, May 3, 1891) to have been able to reduce the temperature to normal, without the occurrence of any untoward symptoms.

In intermittant fevers the drug seems of especial value. If the drug is given two or three hours before the regular time of the rise of temperature, the febrile attacks will be lessened both in intensity and duration. Yet, when a curative action is desired we must return to sulphate of quinine. The remedy, therefore, while being a powerful antithermic, is not an antiperiodic. In typhoid fever, and espedially in rheumatic fever, the drug is prompt in acting; yet it neither lessens the course of the disease, nor relieves the pain. When the thallin salts are used the fall of temperature is always accompanied with abundant perspiration. The secondary rise of temperature following the exhibition of the drug, occurs within four or five hours, and is frequently preceded by a chill. No digestive disturbances, cyanosis or any unpleasant symptoms seem to be caused by the drug.

MEDICINE.

ON THE ETIOLOGY OF TINNITUS AURIUM.

Dr. H. MacNaughton Jones read a paper on the subject named above in the Section of Otology, British Medical Assocsation, 1890. (Reported in *Medical Press and Circular.*)

The paper is based upon two hundred and sixty cases of tinnitus aurium, taken from the author's private note-book. Of these, 127 were males, and 133 females. The ages varied from under ten years (3) to eighty years. The youngest patient was three years old. The right ear was the seat of tinnitus 36 times, the left ear 53 times, and both ears 171 times. The ascribed causes were cerumen, 30; naso-pharyngeal catarrh, 28; nasal turbinate congestion and obstruction, 19; mental worry and over-strain, 14; sea-bathing, 12; scarlatina, 9; heredity, 8; effects of tropical climate, 8; the menopause, 8; injuries, 7; hypertrophied tonsils and tonsillitis, 7; abscess or inflammation of meatus, 7; cardiac disease, 7; gout, 5; uterine disorders, 5; measles, 4; syphilis, 4; alcohol, 4; rheumatic fever and rheumatism, 3; pregnancy, 2; Bright's disease, 2; ozœna, 2; decayed teeth, 2; facial paralysis, 1; puerperal septicæmia, 1; quinine, 1; adenoid growths, 1; from gun-concussion, 1; pneumonia, 1; parotitis, 1. In the remaining cases no cause was assigned.

The clinical conditions of the ear found in these cases were chiefly: catarrhal changes in the tympanum, 102; the same with closed Eustachian tube, 38; making really 140 cases of associated tympanic disease.

The hearing distance was normal in both ears in 18 cases. In 185 cases tinnitus and deafness alone were complained of; in 22 cases aural vertigo was also present. In 7 cases only were there any accompanying ocular symptoms. Attention is called to Ferrier's statement, that "the sense of hearing is in greater part situated in the temporal lobe, and more especially in the superior temporal gyrus of this lobe." Dr. Ferrier also is quoted as saying that "tinnitus may occur in both ears as the result of unilateral irritation, the effect of the intimate connection of the auditory nerves and centres."

Very slight causes may underlie tinnitus aurium, as for example: A fine membranous husk of a hay-seed resting on the membrana tympani.

The following is a basis for a classification of the different causes and varieties of tinnitus aurium, condensed from the original:

1. Impulses originating in the temporal lobe or superior temporal gyrus, the cerebellum, or the auditory nuclei (in the medulla or pons), and referred as impressions to various situations—as the labyrinth or cer-

tain parts of the head. Such acoustic impressions may or may not be attended by deafness.

2. Impulses due to irritation, direct or reflected, in any portion of the auditory nerve.

3. Impulses originating in the peripheral ends of the auditory nerve (perhaps the most numerous class.)

4. Irritation arising from interference with the intra-tympanic muscles.

5. Irritations transmitted by altered conditions of equilibrium of the air in the tympanic cavity.

6. Irritations due to disease in the middle ear and labyrinth.

7. Irritations arising in the external ear.

8. Some aural hallucinations, subjective impressions arising in the psycho-sensorial brain-centres, and having no objective cerebral or aural source of origin. Such hallucinations may become insane hallucinations. The latter may be divided into two distinct forms: (*a*) Hallucinations which arise subjectively in the brain when the auditory apparatus and nerves are healthy. (*b*) Hallucinations which are secondary to objective changes in the aural apparatus, and in which a tinnitus is developed that leads up gradually to a fixed illusion.

9. Therapeutical causes of tinnitus aurium.—*Amr. Jour. Med. Sci.*

CIRRHOSIS OF THE LIVER AND NERVOUS SYMPTOMS.

In the St. Bartholomew's Hospital Reports, vol. xxvi., Dr. Ormerod directs attention to a curious and important class of cases in which extreme cirrhosis of the liver is present, and in which the symptoms are mainly nervous. He relates the particulars of one which was under the care of Dr. Gee. The patient was a boy of ten, who had three or four months before admission developed weakness with cramped position of right hand and arm, and difficulty in speaking. This condition became more pronounced, and was accompanied by gradual mental impairment, difficulty in swallowing, and finally some affection of the left arm and hand. During the time he was in hospital, his condition was characterized by severe attacks of pain, extreme noisiness, and idiotic appearance. The electrical condition of the muscles remained unchanged in spite of the contractures and weakness. During the last three months of life he had occasional attacks of pyrexia, sometimes with profuse sweating, he developed bedsores; the urine became alkaline and phosphatic, and mental hebetude became extreme. The optic discs and fundi underwent no change. At the necropsy the liver was found to be in a state of extreme cirrhosis, and the only lesions found in the nervous system were two small, almost symmetrical patches of softening in each lenticular nucleus, and two minute points apparently also of softening in the pons. Dr. Ormerod in his comments on this case, mentions one or two similar cases, of which, however, he is unable to give full notes; but reference is particularly made to set of cases recently published by Professor Homen in the *Neurologisches Centralblatt.* These cases were three in number, and the patients were all members of the same family. Their symptoms were giddiness, headache, mental failure, unsteady gait, and difficulty of speech, together with contractures of the limbs, and in two of them there were found, in addition to slight changes in the cortex cerebi, softening in both lenticular nuclei and well-marked cirrhosis of the liver. These cases offer a new problem in symptomatology, for, whatever may be the relation of the slight changes found in the nervous system to the symptoms produced during life, there seems to be little room for doubt that the fundamental morbid coudition is the cirrhosis of the liver.—*Lancet,* Mar. 7, 1891.

THE INFLUENCE OF TOBACCO ON GASTRIC DIGESTION AND ACIDITY OF THE URINE.

Dr. J. Ydan-Pouchkine reports a number of experiments which he has made in this connection on seven healthy individuals who were not habituated to tobacco-smoking, and his results are reported in the *Bulletin Général de Thérapeutique* for February 15, 1891.

He first examined the effects of tobacco on the gastric juice and the motility of the stomach and on degree of absorption and on the acidity of the urine. For three days the author examined the gastric juice and motility of the stomach, noting the degree of motion of the stomach by salol, according to the process of Ewald and the rapidity of absorption with the iodide of potassium, according to the method of Zweifel, during a second period of three days each, in which the individual smoked, respectively, twenty-five cigarettes daily. For three days after this period the author continued the examination of their gastric juice in order to determine the after-effects of the tobacco. His conclusions are embraced in the following statements:

1. Tobacco increases the quantity of gastric juice, but diminishes its acidity.

2. The quantity of free hydrochloric acid of the gastric juice is diminished under the influence of tobacco.

3. Proportionately to the decrease of the amount of hydrochloric acid there is an equal diminution of the digestive power of the gastric juice.

4. Tobacco likewise slows the action of the gastric ferments.

5. These modifications in the gastric juice produced by tobacco last for a period of several days.

6. As regards the motility of the stomach and its power of absorption, tobacco is stated to produce an increase of these functions.

7. Tobacco has no influence on the acidity of the urine.—*Therap. Gaz.*

SURGERY.

REMARKS ON FIVE HUNDRED CASES OF STRICTURE OF THE URETHRA

Desnos (*Annales des Maladies des Organes Génito-Urinaires*, Jan. 1891) records his observations upon the etiology and treatment of stricture of the urethra, derived from 500 cases.

In the immense majority of the cases the strictures were of gonorrhœal origin; in two instances they were caused by the cicatrization of urethral chancres; and four cases resulted from traumatism, such as falls and kicks. He draws attention to what he calls "slight traumatism of the canal," which sometimes takes place during coitus, and sometimes follows a prolonged erection during the course of an attack of gonorrhœa. He believes that these little ruptures of the mucous membrane are more frequent than one would suppose, and that they play a considerable part in the genesis of stricture.

His experience goes to show that gonorrhœal strictures are of slow development, having never seen one in which a year and a half, at least, had not elapsed since the beginning of the urethritis. A traumatism, on the contrary, whether slight or extensive, leads to the rapid formation of a contraction.

He points out as a remarkable fact the degree to which a stricture may attain before the patient experiences functional troubles. Many patients do not seek relief for difficulties of micturition, but for such complications as cystitis, fever, digestive disturbances, etc.

As to the locality of the stricture, an analysis of the cases showed that almost all the constriction was in the bulbous portion of the urethra. In nearly one-half of the cases the strictures were multiple, the tightest ones being in the bulbous region. He never met with an instance in which the stricture was impassable, but always, even in the most difficult cases, after patient and repeated efforts, has succeeded in passing a bent filiform bougie.

The methods of treatment employed by him, and the number of cases treated by each, were:

	Cases.	Deaths.
Gradual dilatation	387	1
Internal urethrotomy	78	0
External urethrotomy	3	1
Electrolysis	32	0
	500	2

With regard to gradual dilitation, he insists upon the necessity of proceeding with extreme slowness and patience, avoiding all violence, rapidity of movement, and pressure, however slight. Of the employment of cocaine in the urethra, he says that he rarely uses it. Outside of the dangers inherent to the drug, he has found a disadvantage in the fact that the cocainized urethra offers a certain degree of resistance to the passage of sounds. He insists in a most positive manner upon the association of antiseptic and aseptic measures with the instrumental treatment of the urethra, cleansing the external parts with a boric acid solution, and irrigating the urethra with it as well. The instruments to be employed should be sterilized. To the patient he administers salol or biborate of sodium. His experience goes to prove the value of these precautions, since he met with urethra fever in but two per cent. of his dilatations.

As to the question whether dilatation really leads to the cure of stricture, the writer is unable to adduce a sufficient number of facts, less than one-half of his patients having remained long enough under observation.

Passing on to the operation of internal urethrotomy, Desnos expresses his preference for the Maissoneuve urethrotome, having employed it in all but two of his seventy-eight cases. He uses a small blade, and thinks that a division of the stricture to a calibre of twenty-one or twenty-three is quite sufficient. He thinks that when it can be easily introduced, a catheter should be left in the bladder after the operation, for the purpose of preventing contact of the urine with the wound; but when difficulty is met

with, he believes that the attempts to pass the catheter will be of more serious import than the omission of its use.

External urethrotomy he regards as an operation required only in exceptional cases. Of the three patients upon whom he performed it one had multiple perineal fistulæ, another had a calculus impacted behind a tight stricture, and the third suffered from stricture resulting from rupture of the urethra.

Desnos's conclusions as to the several methods of treatment show that he strongly favors gradual dilatation as being applicable to the greatest number of strictures. He calls attention to the advantage which it possesses of not confining the patient to bed, and its freedom from serious risks, and believes that it should undoubtedly be employed if the dilatation progresses regularly, and no complication arises. If, during the course of treatment, cystitis, prostatitis, fever, or hemorrhage, should be met with; or if, after dilatation, the contraction speedily returns, the operation of internal urethrotomy is indicated. He is of the opinion that the final results of the operation will advantageously bear comparison with any other mode of treatment.—*Univ. Med. Mag.*

A METHOD FOR REMOVING TATTOO MARKS.

Variot (*Jour. de Med. et de Chirurg. Prat.*, January 10, 1891) details the procedure which he adopts for the removal of these disfigurements. The skin to be decolorized is first washed with a concentrated solution of tannic acid, and is then closely punctured with a set of needles, such as tattooers use. A crayon of nitrate of silver is next thoroughly rubbed over the area, and after a moment the skin is dried off, when it will be found that the punctures are deeply blackened by the formation of the tannate of silver in the superficial layers of the skin. The cauterization is said to result in an inflammatory reaction for a couple of days, and subsequently in the formation of a crust or thin eschar, which separates spontaneously in from fourteen to eighteen days, leaving beneath it a superficial red cicatrix, which gradually loses its color, and at the end of a few months, M. Variot states, is scarcely perceptible. He does not consider it expedient to attack at one sitting an area larger than a dollar, lest the inflammation provoked should be too severe, and interfere with the pursuance of the daily duties of the individual. The only dressings which he employs after the little operation consists in keeping the part powdered with tannin.

NERVE-GRAFTING.

Atkinson has recently reported a number of successful cases of nerve-grafting to the British Medical Association. It is important to bear in mind that the substitution of a new piece of nerve for a piece that has been lost (nerve-grafting) is a totally different thing from the uniting of a nerve (nerve-suturing). In one case the median nerve had been divided in an operation. Two and one-half inches of the tibial nerve from an arm that happened to be amputated at the same time, was transplanted to the forearm of his patient. Healing occurred by first intention, and sensation began to return in thirty-six hours, and in five weeks was complete. The muscles partly recovered their power. A number of other cases were reported with similar results. Strict asepis is important, though union may occur following suppuration. Return of sensation occurs before motion. Better results are obtained when the grafting is performed *immediately after the injury.*

GYNÆCOLOGY.

EFFECT OF LEECHES IN THE UTERINE CAVITY.

Dr. Montane (*Nouvelles Archiv. d' Obst. et de Gynéc.*, March, 1891) states that he is not accustomed to plug the os with wool when applying leeches to the cervix, but simply catches each leech with forceps with large teeth, places it against the cervix, and lets go of it when it has taken a firm hold of the tissues. He has never seen a leech shift its position. Once, when he was applying leeches, the patient sneezed violently, so that the Ferguson speculum was shot out of the vulva. When reintroduced three leeches were found still adherent to the cervix, and a fourth rapidly escaped up the cervix, and ensconced itself in the uterine cavity before it could be seized with a forceps. A red rubber sound was passed up the cervix, and a small amount of warm carbolised water thrown into the uterus. The water came back in intermittent jets, and at length a black body appeared, which was seized with forceps; it was the cephalic end of the leech, which was easily extracted. The patient knew nothing of the misadventure. Dr. Montane's colleague, Dr. Arrango, describes another case where a leech could not

be displaced so speedily from the uterine cavity. It set up intense pain, which, it is remarkable to note, was referred to the region of the right ovary. Violent convulsions followed, and lasted for nearly half an hour, leaving the patient in a most distressing state of excitement, the pain being unabated. The fits returned. Three hours after the beginning of the pain the patient was seized with violent uterine contractions, compared by her to the sensations experienced during an abortion, the leech, perfectly gorged with blood, escaped from the vulva, the pains and convulsions thenceforth ceasing entirely.—*Brit. Med. Jour.*

THE TOTAL EXTIRPATION OF THE UTERUS.

Fifty-seven cases are reported in which the author has removed the entire uterus; for carcinoma, 53; sarcoma, 2, and prolapse, 2. In favorable cases of carcinoma one should hope for complete cure. Partial extirpation is rarely indicated. In one case a partial operation was performed upon a woman who was seven months pregnant, a wedge-shaped excision of the cervix being performed without interruption of the pregnancy. In only two of the above series did death result from the operation, the cause in one being uræmia after ligation of the left ureter and wounding of the bladder. In two cases it was subsequently necessary to perform kolpo-kleisis on account of vesico-vaginal fistula. In three cases the patients were more than 60 years of age. The suturing of the peritonæum and disinfection salicylic and boric acid are deemed very important. In twenty-five of the carcinoma cases a year passed without recurrence of the disease. Recovery from the operation was usually rapid. In cases in which there was recurrence the thermo-cautery and chloride of zinc were used. In none of the operations was there severe hæmorrhage, and in one case a vesico-vaginal fistula was cured by the operation upon the uterus.—*Jour. de Méd.*

DEFECTIVE DEVELOPMENT OF GENITALS.

Dr. von Swiecicki (*Der Frauenarzt*, April 1, 1891) was consulted recently by a robust woman, aged 30. She had always been healthy as a child. After the age of 20 the menstrual molimen was noticed every four weeks, and the hands and feet then became swollen to a marked degree. A little blood passed from the anus; at the same time there was nausea and headache. All these symptoms lasted for about four days. Early in January a severe attack of hæmatemesis set in during the presence of the menstrual molimen, and the vomiting of blood recurred four times within a week. Nearly a pint of blood was lost during each attack. On this occasion it was remarkable that the breasts became swollen, which was unusual, though the ordinary œdema of the hands and feet did not occur. The patient was perfectly feminine in mind and in general confirmation. The hymen, like the vulva, was normal, but there was an impassable septum above it. After very careful recto-abdominal and recto-vesical exploration it was concluded that the vagina, uterus, and left ovary were entirely absent. A small right ovary could be distinctly defined. Dr. von Swiecicki quotes Kline's case, where the uterus and vagina did not exist, but both ovaries were present. Molimen with epistaxis for two days occurred every three weeks. Œdema of the extremities has been observed in other cases, and may accompany menstruation otherwise normal. Börner refers it to vasomotor disturbances.—*Brit. Med. Jour.*

OBSTETRICS.

ON THE TREATMENT OF BREECH PRESENTATION.

Winter (*Deutsche Medicinische Wochenschrift*, February, 1891) contrasts the different line of treatment to be adopted in breech and foot presentations, and the more favorable prognosis offered by the former variety. Expectancy is the attitude to be adopted in footing cases, but interference is necessary if in breech presentations delay becomes dangerous to mother or child. The indications for bringing down a foot in breech cases and completing delivery are complications endangering the life of mother or child, such as slowing of pulsation in the cord, impending asphyxia, hæmorrhage, septicæmia, &c. In prolapse of the cord, eclampsia and contracted pelvis, this method of procedure may also have to be adopted. The writer quotes the opinions of various authors as to the particular form of contracted pelvis in which the operation can be performed with beneficial results. He considers that in normal conditions it is wrong, because it is unnecessary, and while not entirely harmless for the mother may be very detrimental to the child. In eighteen cases where delivery speedily followed drawing down of the foot,

seventeen of the children survived, while in nine cases, where delivery was more tediously accomplished, four of the children were lost.

The writer advocates bringing down a foot in preference to traction with the fingers, loop or blunt hook, all of which are either tedious or dangerous. If these were so safe an instrument for the breech as forceps for the head, there would be no necessity for bringing down the feet. All the breech forceps invented have been failures.

If the foot cannot be brought down, the author recommends traction with the finger, inserted between the thigh and abdomen of the child, and if this be unsuccessful, a skein of worsted or silk may be employed; but this is often difficult or impossible of application. Poppel advocates introducing it by means of a Bellocq's sound. Winter strongly recommends an instrument invented by Bunge, and called a "loop carrier." It consists of a curved metal staff, grooved on its concave surface, and containing a thick hempen cord covered with gutta-percha, and about eighteen inches long. The latter is passed by means of the staff between the thighs and abdomen of the child, the staff is withdrawn, and the loop can then be used as a tractor.

His conclusions are:—(1.)Normal cases to be treated by the expectant method. (2.) Bring down a foot in cases of prolapse of the cord, eclampsia and contracted pelvis, but not, as a rule, before the os is well dilated. (3.) Complete the labor in breech cases where desirable by bringing down a foot, and proceed at once to extraction of the child. If the breech is too low in the pelvis for this operation, use the finger as a tractor, and should this prove unsuccessful, employ Bange's instrument or a skein of wool.—*Dublin Jour. Med. Sci.*

ANATOMY OF TUBAL PREGNANCY.

Two cases are recorded occurring in the practise of Dr. Landau. In the first case the patient died in a few minutes after the arrival of the physician. In the second the patient's condition was so poor that no operation could be attempted. But in spite of rupture the patient rallied and made an excellent recovery. In Case I. the autopsy revealed a rupture of the right tube. The decidua was removed from the uterus. In Case II. pieces of decidua came away. Careful microscopic examinations were made of these specimens, and from these the following are formulated:

In tubal pregnancies occurring in the fourth and fifth week we find:

1. That the endometrium is about to become changed into a decidua. The compact layer, the so-called layer of Friedländer, is not fully formed.

2. The superficial epithelium of the decidua uterina is intact as late as the middle of the second month, although its form is materially changed.

3. The vessels which are found in the superficial layers of the decidua uterina are in all probability arteries and veins.

4. The ovary and tube on the unimpregnated side remain unchanged. The ovary containing the gravid corpus luteum is enlarged.

5. The cause of tubal pregnancy may be assumed to be due to a diverticulum in the walls of the tube or a marked tortuosity of the same.

6. That portion of the tube not included in the impregnated sac usually remains unaltered.

7. A decidua tubaria vera is formed upon the mucous membrane of the tube, having its greatest amount of development at the poles of the ovum. The superficial epithelium of the decidua serotina disappears, and is replaced by the endothelium of the freely communicating capillary vessels.

8. In the majority of the cases no decidua tubaria reflexa is formed. If one is formed it differs entirely from the uterine reflexa, owing to its small number of vessels.

9. The attachment of the chorionic villi to the decidua tubaria is extremely loose in the beginning ef the pregnancy, but in some situations a complete union between the two is found.

10. The epithelium of the chorionic villi is of the three varieties. The maternal capillary endothelium lies external to a double layer of fetal epithelium.

11. The intervillous spaces are composed of dilated maternal capillaries, whose walls are not penetrated by the chorionic villi.—*Archiv. fur Gynäkologie.*

TOXIC SPASM OF PARTURIENT UTERUS OVERCOME BY ANTIPYRIN.

Dr. Wright, of Toronto (*Archives of Gynæcol.*, New York, April, 1891) reports the case of a primipara, aged 22, of sedentary habits. The pelvic outlet was slightly narrow; pregnancy was normal. The os was rigid, and the membranes ruptured prematurely, so that the first stage of labour lasted over twenty-four hours, although

three 15-grain doses of hydrate of chloral were given to relax the os. The head then descended rapidly half down the vaginal canal, but then the progress of labour became slow. At the end of forty hours the head was well down in the perineum, but the rigidity of external parts rendered the pains ineffectual. Symptoms of exhaustion then began to appear. The pains became shorter and more frequent, the pulse increased to over 100, and the patient complained of nausea and thirst. It soon became impossible to make out distinct intervals between the pains, and, on examination, the uterus was found retracted, and in a state of tonic contraction. Three 15-grain doses of antipyrin, to be taken at intervals of one quarter of an hour, were prescribed. Before the second dose had been given the patient felt easier; after the third the pains were about three minutes apart, and the tetanic contractions had disappeared. The head, being very large in proportion to the outlet, was delivered with forceps under chloroform. The uterus took three-quarters of an hour to contract properly after the administration of ergot in drachm doses. Dr. Wright considers that this case shows the value of antipyrin in uterine tetanus. It might more beneficially be used before the muscular fibres and nerve centres are exhausted by prolonged tonic contractions.—*Brit. Med. Jour.*

PÆDIATRICS.

INFANTILE CEREBRAL PALSIES.

Professor Sachs, in a paper read before the New York Neurological Society (*New York Med. Journ.*, May 2nd, 1891), discusses the pathology of the cerebral paralyses of infancy. He divides them into the congenital cases, that is, those occurring before birth and due to gross cerebral defects; birth palsies, the result of protracted labour, where meningeal, or more rarely intracerebral, hæmorrhage has taken place; and those acquired after birth, in which in agreement with the majority of recent writers on this subject, he considers vascular lesions as by far the most common cause; next to these he places chronic meningitis and hydrocephalus; and lastly, Strümpell's primary encephalitis. This last condition he believes to be excessively rare, and he holds that the theory should be accepted with some reserve. The diagnosis of the different kinds of vascular lesion, that is, embolism, thrombosis, and hæmorrhage, he admits to be sometimes very difficult, but when hæmorrhage can be diagnosed, he thinks that surgical interference is imperatively called for. If the symptoms point to the formation of a large clot over the motor area of a child otherwise healthy and strong enough to endure the operation, he recommends that an attempt should be made to remove the clot in order at once to relieve pressure upon the given area, and to prevent secondary degeneration. This latter point would be certainly well worth attaining, but the diagnosis of intracranial hæmorrhage in the young is by no means so easy. Still, where it can be made, there is no objection to the use of the trephine.—*Brit. Med. Jour.*

SPINAL PARALYSIS IN CHILDREN.

Several cases of this disease are reported by Professor Charcot in a recent number of the *Journal de médecine et de chirurgie.* In examining into the antecedents of these cases a family history of nervous disease is frequently found. Hysteria, epilepsy, insanity, and various other nervous affections are not uncommon. This is, however, in contradiction of Cordier and others, who have seen the disease occur epidemically. In one case reported by the author fatigue seemed to play an important ætiological role. On the third day after excessive fatigue the child became delirious and one of the legs was found to be paralyzed. The case was peculiar from the fact that but one limb was attacked at the outset. The paralysis did not change from place to place and finally locate itself in one member, as is frequently the case. It was confined to the sciatic region and was very severe. Complete loss of all electrical reaction indicated that all hope of cure was gone. A second patient was attacked without apparent cause. Chilliness was the only symptom at the onset, and was followed in the evening by paralysis of the left leg. On the following day the left hand also was involved. The bladder was soon affected, which resulted in retention of urine for several days. This is a symptom of frequent occurrence in children.

NOTES OF AN EPIDEMIC OF MEASLES.

Dr. Frederick Stanbro says: I write these notes, not because Rubeola is such a rare disease, but in order to put on record certain irregularities observed during this epidemic, which I trust, will be of interest, and may be of service to the general practitioner.

Beginning in the last week of January, 1891, and continuing seven weeks, there has

been a severe epidemic of measles in this region. No such epidemic has been observed here in fifteen years, both as regards severity, numbers attacked, and small mortality.

All unprotected persons have been attacked, and six authentic cases I have observed which have suffered a second attack. These six persons had measles before, under the observation and care of physicians in this vicinity, and there can be no mistake. Three had mild attacks from three to ten years ago, and three had severe attacks seven years ago. Each of these six cases had measles under my observation this season, and all had it in the severest form, the prodromes, rash, catarrhal symptoms, all being typical. I lay special stress on these cases, as there seems to be some doubt on this subject among medical minds, as well as among the laity.

Of the 110 cases observed and treated, I find sixty males, and fifty females; of these, twenty-four were adults and six were infants under the age of nine months.

The period of incubation was about nine days, but the eruptive stage was wonderfully delayed, the rash not appearing until a week had passed, in the majority of cases, and in two cases of young ladies, aged respectively sixteen and eighteen years, the rash did not appear until nine and fourteen days had passed, during which time they were confined to the bed with the usual symptoms of the prodromal stage—viz., malaise, headache, bone-ache, slight fever, etc.

During this period of "invasion" the patients were all ill and suffered from aching bones and muscles, constipation, nausea, headache, and other symptoms similar to those of "la grippe" of last year. A slight rise of temperature would be observed, and for about three days before the appearance of the rash the coryzal symptoms and the peculiar hacking cough would appear.

The temperature was extremely high as a rule, being 103° F. in most of the cases, 104° F. in twenty cases, 105° F. in ten cases, and 105⁵° F. in three cases.

The pulse was correspondingly high, running from 120 to 160 in the severest cases. Slight congestion of kidneys occurred in most of the days before the appearance of the rash, and delirium was a common symptom.

In a few cases, earache was so severe as to call for local treatment.

Sequelæ.—Catarrhal pneumonia attacked one patient weakened by the measles, and whooping cough occurred in nine cases. The severe coughing caused a direct inguinal hernia in a young man about sixteen years of age. Otherwise all the cases recovered, not one of the 110 dying, and only one is now under my observation.

Treatment.—The simpler cases demanded no treatment, except light diet and some calming expectorant.

The more severe cases were kept in warm, darkened rooms on strictly milk diet. High fever was relieved or controlled by tr. aconite, quinine and tepid baths. Constipation relieved only by warm enemata. Dysuria, or suppression of urine, by spirits of nitre and other simple diuretics.

The conjunctivitis required nothing but warm lotions, and the general pruritus was relieved by inunctions of vaseline or lard.

Only a few required any tonic treatment during convalescence.—*Exchange.*

BROMOFORM IN WHOOPING COUGH.

Recently THE REPORTER has several times found occasion to speak of the efficacy of bromoform in whooping cough. Perhaps the most recent experiences with the drug are those of Dr. Naurœlærs, of Brussels, which are referred to in the *Wiener. Med. Wochenschrift*, May 10, 1891. The author gives the drug in the following formula:

℞

Bromoform	xx gtt.
Alcohol	10.0 grammes.
Sol. gum. trag	
Syr. tolu, aa	60 0 grammes

M. One coffeespoonful every hour.

The mixture should be well shaken before administration, and should be kept in a well corked bottle. The solution of gum facilitates an equal distribution of the remedy in the mixture and the large quantity of syrup marks its unpleasant taste, so that children take the dose without murmuring.

In adults, Nauwelœrs gives the drug in capsules, each containing gramme 0.50 of bromoform. He gives the patient 14 capsules during two or three days. In children the dose should vary with the intensity of the attack and the strength of the child. At first 8–10 drops daily is usually a sufficient dose but in a few days this may be increased to 20 drops, if found necessary.

Bromoform has one drawback; it is apt to cause diarrhœa. In order to hinder such an action, the drug may be combined with opium or astringents. If, however, the diarrhœa still persists, the drug must be discontinued for a few days. In 74 cases in which the drug was tried, it only failed once. Three greatly weakened children died of bronchopneumonia, but all the rest recovered rapidly,

the direct action of the drug being admirable. In many cases a cure was accomplished within 5–6 days. No other remedy has, as yet, shown such abortive properties in this disease.

HYGIENE.

INFLUENZA BACTERIA.

A recent number of the *Progrès médical* contains an abstract of an article by Professor Babes, which appeared in the *Centralblatt für Bakteriologie und Parasitenkunde*, on the subject of bacteria in influenza. The author has succeeded in isolating two varieties of micro-organisms to which he thinks that in all probability the pathological element in the causation of influenza may be attributed. Those of the first variety form short chains, are immobile, and are not stained by Gram's method. Their colonies are small in dimensions, transparent, and developed through the entire culture media. They have been proved capable of producing active pulmonary inflammations. The bacteria of the second class produce on agar-agar colonies that present a dark centre and a whitish periphery. They are also immobile, but, unlike the first variety, are colored by Gram's method. In mice, the inoculation of this culture produced fatal pneumonia, the bacilli being found in the blood-vessels; and in rabbits a local inflammation resulted.—*N. Y. Med. Jour.*

COMPULSORY NOTIFICATION OF INFECTIOUS DISEASE.

In criticising the notification bill of last year, one of the reasons which we urged against its enactment, was that it must always be impossible to enforce such law, or to impose the penalties provided for omission to notify. You may bribe an unscrupulous practitioner by half-a-crown to report an infectious case, but you can never punish him for omitting to do so, because you can never prove that he knew the case to be infectious and yet concealed it. The most careful and conscientious practitioner may be in doubt as to the nature of the disease for a week or ten days after its onset, while an ignorant or stupid man may fail to recognize it even when the symptoms were tolerably clear. But he could never be punished for mere ignorance, nor could a prosecution be successfully maintained if he met the accusation by denying that the case was infectious, and by asserting that the Medical Officer of Health was all wrong in his diagnosis. Our anticipation of the working of the Act in this respect has been fully realized, for the only attempt at prosecution which, as far as we know, has been made since the Act became law has completely failed, and a judgment has been given by the Court which makes successful prosecutions almost impossible. The worst of this is, that the law offers every inducement for the trickery of unscrupulous practitioners, while it handicaps truthful and conscientious persons. The unscrupulous doctor certifies every case which is not worth half-a-crown to him in private fees, and he conceals every case which is worth more than that sum. If he meets with a pauper who has shivered and has a headache, he at once concludes that the patient is in for an infectious attack, and he reports him forthwith, at a profit of half-a-crown, whether the case is really infectious or not, and the patient goes to swell the half-yearly earnings of the notifier and the total of infectious notifications, to the great satisfaction of the Medical Officer of Health. But if the patient happens to be worth more than half a crown, the practitioner is slow to diagnose infective disease, pronounces that it is nothing but a bad cold, and keeps the case concealed to the end of the chapter. An Act of Parliament which imposes penalties which it is impossible to enforce, is ridiculous, and its apparent results totally unreliable, and, therefore, we shall attach no confidence to the supposed beneficial results from the compulsory notification system until we see whether a decreased death-rate from zymotics is the outcome of it.—*Med. Press.*

THE SUPPRESSION OF JUVENILE SMOKING.

It is doubtless desirable to place some check upon the use of tobacco by juveniles—a practice which is every day becoming more general, or at any rate, more flagrant, but we know by sad experience that inebriety, whether of alcoholic or other source, is not easy to control by legislative enactment. The experiment is being tried in certain cities in the United States, but we are not yet in possession of any reliable data as to the effect of the police regulations. The labors of the ubiquitous policeman will be materially added to, if, in addition to preventing juveniles playing tipcat in crowded thoroughfares he be expected to stop every offender against an anti-juvenile smoking law. It was suggested at a recent meeting on the subject at Manchester that lads take

up with the habit "ignorantly supposing they will be benefited thereby," but this we venture to doubt, as also the proposed educational remedy based on that assumption. It is the imitative faculty which is mainly responsible for the spread of the habit among young people, and parental example is a potent factor in its promotion. The best plan would be to authorize municipalities to make and enforce tentative regulations of this kind, for an inoperative general law would only prove a barrier to such modifications as experience might suggest. The first step would necessarily be to make it an offence to sell the weed to persons below a certain age, as has been done in regard to spirits.—*Med. Press.*

MEDICAL CHEMISTRY.

THE QUANTITATIVE ESTIMATION OF SUGAR WITH ROBERTS' FERMENTATION TEST.

Dr. Morris Manges, in the *Medical Record* refers to two inherent important advantages in this process, which deserve notice. The one is that fermentation is the only absolute test for determining the presence of glucose; it is the chemist's crucial test to absolutely distinguish it from allied substances, some of which may have a similar chemical composition, or may reduce Fehling's solution, or may have a right rotary action on polarized light.[1] The other is that none of the usual reducing substances (albumin, uric acid, etc.) can interfere with its action.

The principle upon which all the fermentation tests are based is the well-known splitting up of glucose by yeast into alcohol and carbon dioxide. $C_6H_{12}O_6=2C_2H_6O+2Co_2$. Another reaction occurs which is not expressed in the formula; that is, the specific gravity of the fermenting fluid is lessened in direct proportion to the amount of grape-sugar present. This loss of weight is due not alone to the disappearance of the sugar, but also to the presence of the generated alcohol; it is the presence of the latter which sometimes, though rarely, causes the specific gravity of the fermented liquid to sink below 1,000.

From the above we see that there are several factors which may be utilized in quantative estimations by this method. 1. The carbon dioxide, usually estimated by volume, as in Einhorn's method. 2. The alcohol; is too complicated and unreliable. 3. The difference in the specific gravity of the unfermented and fermented fluids; may may be estimated (*a*) by actual weighing with accurate balance, as is done by chemists; is not adapted for general use; (*b*) by taking specific gravity, as in Roberts' method.

For clinical purposes we are thus reduced to the methods of Einhorn and of Roberts. Einhorn's method being too well known to need description here we shall at once proceed to consider the test proposed by William Roberts of Manchester; and so well has its distinguished author done his work, that, although thirty years have almost elapsed, the method stands practically as originally proposed. The only requisites for the test are a sufficiently wide cylindrical urinometer-jar of about two to three ounces capacity, and two good urinometers, one reading from 1.000 to 1.025, the other, 1.025 to 1.050;[1] large subdivisions of the scale are essential. Urinometers with thermometers are desirable, but by no means absolutely necessary. The tests of a good instrument are that in distilled water at the temperature for which it is corrected, the instrument should stand at 1.000, and in a dilution of any salt solution with an equal volume of distilled water the reading should be one-half of the gravity of the original salt solution.

The procedure is carried out as follows: Having accurately taken the specific gravity of the specimen of urine, and noted the temperature, about four ounces (if quantity is small, one-half this amount will suffice) are poured into a twelve ounce bottle, "a lump of compressed yeast about the size of a walnut" (half a cake will be found sufficient) is added and thoroughly stirred up; the bottle is then closed with a nicked cork, to prevent the escape of the CO gas generated. A standard is then prepared by filling a two or four ounce bottle with some of the same urine, and is securely corked without having added anything. The two bottles are now put aside in a warm room for eighteen to thirty-six hours, when the fermentation will have been completed, as is shown by the cessation of the formation of bubbles in the fluid, and also by the clearing off or subsidence of the scum. The bottles are removed to a cool place so that they may acquire the same temperature as at the beginning of the test; a portion of the fermented fluid is decanted and the specific

[1] Leo has isolated such a substance, which has the same chemical formula, reduces Fehling's solution, and rotates polarized light to the right, yet differs from glucose in not fermenting.

[1] Should the specific gravity be above 1 050, the specimen should be diluted. This is uncommon, however.

gravity and temperature are again noted. It is also well to note the gravity of the "standard," to see if it is identical with the original reading. The difference in the two readings of the specimen, before and after fermentation, multiplied by 0.23 will give the percentage of sugar in the specimen. Or we may express it thus: each degree of specific gravity lost in fermentation represents one grain of sugar to the ounce of urine. The total amount for twenty-four hours being known, the total amount of sugar can be calculated.

Roberts gives two examples. A specimen showed 11.36 per cent. sugar by titration with Fehling's solution, (= 49.64 grains to the ounce). The specific gravity was 1.0535; after fermentation it fell to 1.0045; it lost 49°, *i. e.*, 49 grains to the ounce; or, x 0.23 = 11.27 per cent.

A second specimen had 5.68 per cent. sugar (=24.82 grains to the ounce) as shown by titrating with Fehling's solution. The original specific gravity was 1.03032; after fermenting it fell to 1.01356; the difference was 24.76°, *i. e.*, 24.76 grains to the ounce; or, x 0.23 = 5.69 per cent.

Jaksch says, after trying the method on eight cases of diabetes, that "it gives thoroughly reliable results for clinical purposes, and is one which is to be commended, especially to busy physicians, on account of the simplicity and ease of its application." He quotes four cases which were examined with a special apparatus designed to prevent evaporation (which, however, is superfluous), the control-examinations having been made by polarization.

Guttman highly commends the method after having used it in over one hundred cases. He has simplified the method as follows: In a three to four ounce cylindrical glass vessel the specific gravity is taken; a quarter of a cake of compressed yeast is added and thoroughly stirred up; the vessel is covered with a piece of paper and set aside at 15° C. (59° F.) for twenty-four hours. Then the yeast has settled, and the specific gravity is taken in the same vessel at about the same temperature as the original observation. He has ascertained that the temperature changes exert slight differences in the result if the percentage of sugar is over one per cent.; and if over two per cent. it is reduced to $\frac{1}{2}$ per cent. to $\frac{1}{10}$ per cent. The exact difference is 3° C. (5.4° F.) = 1°; thus a reading of 1.022 at 12° C. would be 1.021 at 15° C., and 1.020 at 18° C.

Dr. Manges has tried Roberts's method in a fair number of specimens and the results, from a clinical point of view, have been very satisfactory. Comparisons were made with Einhorn's method, and the specimens were also titrated with Fehling's solution as modified by Munk.

Dr. Manges's observations agree with those of the other observers in proving that there is no constant source of error, but that the result may be more or less than the actual amount. What the cause of this error is he has been unable to ascertain. That it is not due to the urinometer is shown by Worm-Müller's figures, who also obtained higher and lower results although the pyknometer was employed to determine the difference in the specific gravity. Possibly we may find the cause in subtle changes of temperature, or in the secondary fermentation which occurs in the yeast itself. Whatever these influences may be, they are surely not of very great importance, nor do they detract from the claims of this procedure of being called the "Clinical Method," as proposed by Roberts.

The advantages of the method may be summed up thus: It is simple; it requires no special apparatus nor special experience; dilutions are unnecessary, and hence the multiplication of an error is avoided; impurities in the yeast have very little effect on the result. The disadvantages, besides that inherent in all the fermentation tests, that they are slow, are, that it does not show amounts of sugar below 0.4 per cent., and also that it requires a larger amount of urine. The latter, however, is more apparent than real, for in Einhorn's method we must also have enough urine to estimate the specific gravity.

There are also certain disadvantages present in Einhorn's method from which this method is free. In the first place, gases are much more affected by differences of temperature and atmospheric pressure than are liquids. Then the necessary dilution is a cause of inaccuracy; Einhorn gives definite rules as to the proportions, as if certain ranges of specific gravity must correspond with approximate amounts of sugar, for he directs that "diabetic urines of a straw color and a specific gravity of 1.018–1.022 may be diluted twice; of 1.022–1.028, five times; 1.028–1.038, ten times." There are other ingredients, however, in urine which may markedly affect the specific gravity, *i.e.*, urea, phosphates, chlorides, etc. The analyses already quoted show this very forcibly; thus, Nos. 8 and 9 of the last table both have specific gravity of 1.0315, yet the one has 4.37 per cent. sugar, and the other, 1.92 per

cent. Furthermore, a high specific gravity does not necessarily mean a large amount of sugar, nor a low specific gravity indicate a small percentage. Thus No. 3 of Guttman's cases has specific gravity of 1.011, yet has 1.495 per cent. sugar, and Nos. 11 and 12 of my own series, each with a specific gravity of 1.028, have only two per cent. and 1.38 per cent. sugar respectively. If we do not dilute enough, the gas will pass up into the bulb; if we dilute too much, the amount of gas will be so small that a large error is unavoidable, because of the subsequent multiplication.

Guttman has also shown that only a small part of the carbon dioxide remains in the long arm of the saccharometer, while the greater part escapes into the air through the bulb. Thus 10 c.c. of a one per cent. saccharine urine ought to give off 24 c.c. of CO at ordinary temperature and atmospheric pressure; of this only 5 c.c. are registered, while 19 c.c. are lost. (A small amount of the gas may also be absorbed by the fluid.) This objection, however, may be more theoretical than practical, for even Guttman comes to the conclusion that for saccharine urines under one per cent., Einhorn's method gives reliable results.

Dr. Manges would go even further than this, and say that with most urines it gives results which are sufficiently accurate for clinical purposes; but, at the same time would assert that Roberts's method is in many respects superior to it. Neither method, however, gives absolutely accurate results. But this applies to every test which has yet been proposed for this purpose, even to the most delicate of them all, polarization and Fehling's test. For the right rotation of polarized light may be partially neutralized by the presence of oxybutyric acid, which rotates polarized light to the left. As for Fehling's test, we are all familiar with the difficulty of telling exactly when the blue color has disappeard, and we all know how its results may be affected by the reducing action of albumin, uric acid, kreatinin, etc.

News and Miscellany.

ITALIAN PHARMACOPŒA.

The first national Italian formulary is about to be published.

RESIGNATION OF DR. FRANCIS MINOT.

Dr. Francis Minot has resigned from the Chair of Practice in the Harvard Medical School.

DEATH OF DR. JOS. P. LOGAN.

Dr. Joseph P. Logan, editor of the *Atlanta Medical and Surgical Journal*, died at Atlanta, Ga., on June 2nd.

THE JOHNS HOPKINS HOSPITAL.

The Johns Hopkins Hospital accommodates one hundred and twenty patients and cost over two millions of dollars.

FOUR YEARS' COURSE AT HARVARD.

Beginning with September, 1892, the regular course in medicine at Harvard to obtain the degree of M. D., shall be four years.

DR. J. MADISON TAYLOR.

Bar Harbor, Maine, will be fortunate this summer in having at command the professional services of this distinguished physician.

A NEW JOURNAL OF GYNÆCOLOGY.

A monthly Journal of Gynæcology, Obstetrics and Abdominal Surgery has appeared, and is edited by Dr. Charles N. Smith, of Toledo, Ohio.

THE METRIC SYSTEM.

Russia is the latest to make the study of the metric system compulsory by all medical and pharmaceutical students, and has made it also compulsory in prescriptions and pharmacy.

TULANE UNIVERSITY.

The Medical Department of the Tulane University has been made the recipient of a donation from Mrs. T. G. Richardson of $100,000, which is intended to be used in erecting a new college. Mrs. Richardson is the wife of Dr. T. G. Richardson, an eminent physician and Dean of the College.

THE VIRCHOW TESTIMONIAL FUND.

October 13th will be the seventy-fifth birth-day of Professor Virchou, and on that occasion it is proposed that the profession pay a suitable tribute in appreciation of his invaluable labors for medical science. Five dollar subscriptions are being raised all over the world, and already a large amount has been subscribed in this country

ARISTOL.

ARISTOL, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous and non-toxic antiseptic remedy, said to be superior to Iodoform, Iodole and Sozo-Iodole.

ARISTOL is insoluble in water and glycerine, and very sparingly in alcohol, but is very easily soluble in ether and chloroform. The ether solution is precipitated by the addition of alcohol. ARISTOL is very freely soluble in fatty oils. The solution must be made in the cold, by stirring, as the use of heat causes a decomposition. For the same reason it is necessary to protect the body from light and keep it in opaque bottles. It very readily adheres to the skin, and can thus be used as a powder strewn over wounds and burns.

In cases of mycosis it also acts well, and more quickly than any other known remedy, and does not cause irritation, like so many drugs.

The effective use of ARISTOL in psoriasis is of great interest, as our Materia Medica has hitherto supplied us with no non-poisonous drug, save only chrysarobin, the use of which is associated with a deep skin coloration and conjunctivitis—drawbacks from which ARISTOL is absolutely free.

In cases of lupus it is said to surpass even the best known remedies.

The value of ARISTOL can scarcely be over-estimated, as we have in it a drug possessing the good properties of Iodoform, but free from its toxic qualities. Its freedom, too, from any suspicious odor will be at once appreciated, both by the physician and his patient.

ARISTOL, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces.

SULFONAL-BAYER.

The value of Sulfonal in children's diseases.—DR. WILLIAM C. WILE sent a paper with this title to the American Medical Association, in which he stated that Sulfonal was the ideal hypnotic. It was without the bad effects of opium and the uncertainty of the bromides. It could be given in ten-grain doses. It quieted reflex irritability. It did not constipate nor disturb the stomach. In one case in which a drachm was taken accidentally in ten-grain doses, there was a deep slumber lasting twenty-four hours, slight fever, but a normal pulse and respiration.—*Medical Record*, New York.

DR. HENRY M. FIELD, in a paper presented to the American Medical Association, says:—"Clinically observed, we recognize in Sulfonal a mild calmative, *a slowly, but progressively acting hypnotic;* it has no other action, and its operation is attended by no complications, near or remote. It is therefore a pure hypnotic, and, we submit, it is the only pure hypnotic we possess, up to date."—*New England Medical Monthly.*

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

PHENACETINE-BAYER.

Phenacetine in Insomnia.—DR. F. PEYRE PORCHER, of Charleston, S. C., writes: "I desire to call special attention to the extreme value of Phenacetine as a remedy for insomnia. Given at night in a little water it is tasteless, innocuous, and induces sleep. I am confident, also, after repeated trials, that it is the best and most unobjectionable substitute for morphia. It causes sleep when, of course, pain is in abeyance, unless the pain be more than ordinary, and morphia hypodermically may then be required. The remedy may be repeated and the dose increased to seven or ten grains.

"Suffering from chronic rheumatism of the forearm, I have tested it repeatedly in my own person, and have given it to many who have suffered from insomnia, or inability to sleep from any transient cause, atigue, nervousness, excitement, etc., in either sex." * * * * *—*Medical Record*, New York.

Phenacetine-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and also in the form of our soluble pills and compressed tablets, containing two, four and five grains each. Either form may be obtained of any reputable apothecary.

It gratifies us to be able to announce that PHENACETINE, SULFONAL and SALOL have been incorporated into the new German Pharmacopœia just issued, and have been proposed by the General Medical Council of Great Britain for introduction into the forthcoming Addendum to the British Pharmacopœia. This action confirms and endorses our judgment in introducing these valuable remedies to the medical profession of the United States, and is a natural sequence of the favorable results experienced in their employment, and of the brilliant and conclusive testimony thereof, which had been so freely furnished by the most talented of the profession both in Europe and in the United States.

W. H. Schieffelin & Co.,

170 & 171 WILLIAM STREET,

NEW YORK.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE. 132 South Fifth Avenue, NEW YORK.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{10}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgmen of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

A BRIEF SUMMARY

OF

HYPODERMIC MEDICATION.

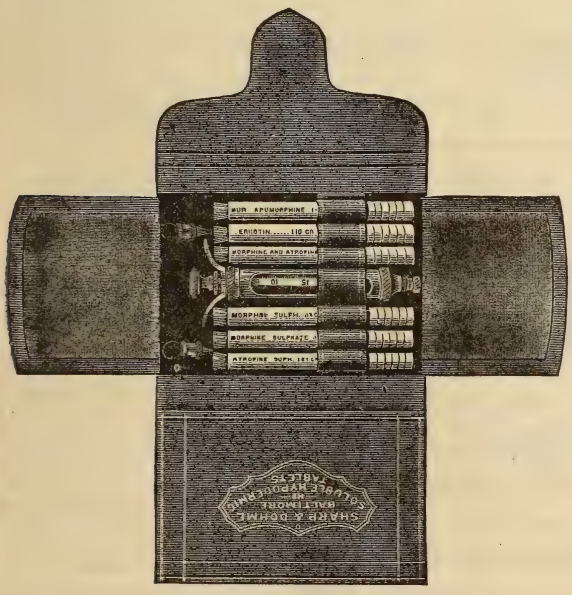
will be sent, with our compliments, when application is made and the name of this journal is mentioned. It quotes Profs. Dujardin-Beaumetz, Bartholow, Anstie, Erb, Echeverria, Mays and others. It contains important and the most recent suggestions on the technique of hypodermic medication, and gives the composition, properties, doses, etc., of our

SOLUBLE HYPODERMIC TABLETS, S. & D.'s.

which are quickly and perfectly soluble in cold or warm water, combining accuracy of dose with perfect preservation of the active ingredient, and the base of which is perfectly harmless and unobjectionable. They will cause no abscesses and will not become insoluble by age. They may also be administered by the mouth, and are

ALWAYS READY FOR INSTANT USE.

We respectfully solicit a trial of these tablets, and will mail samples of them free to readers of this journal.



That the several objections to hypodermic medication might be obviated, we have had manufactured expressly for us a line of

HYPODERMIC SYRINGES, S. & D.'s,

which have all the latest improvements, are most accurately made of the best materials and so constructed as to allow the

MAKING OF A SOLUTION IN THE SYRINGE.

They are sent to any address at the following prices:

Syringe, in leathered-covered case, two tubes of tablets . . . . . net, $2.50
" " metal case, latest improved style, two tubes of tablets . . . . . " 2.50
" " " " four tubes of tablets . . . . . " 3.50
" " flexible leather case, as shown by cut 3.50

ESTABLISHED 1860. 3 BALTIMORE, MD.

RABUTEAU'S DRAGEES OF IRON

Laureate of the Institute of France.—Prize in Therapeutics.

The studies made by the Physicians of the Hospitals have demonstrated that the **Genuine Dragees of Iron of Rabuteau** are superior to all other preparations of Iron in cases of *Chlorosis, Anæmia, Leucorrhœa, Debility, Exhaustion, Convalescence, Weakness of Children*, and the maladies caused by the Impoverishment and Alteration of the blood after periods of fatigue, watching, and excesses of any kind.

TAKE 4 TO 6 DRAGEES DAILY.

Rabuteau's Elixir of Iron is recommended to those persons who may be unable to swallow the Dragees. Dose —*A small wineglassful with meals.*

Rabuteau's Syrup of Iron is specially designed for children. Chalybeate medication, by means of **Rabuteau's Iron**, is the most economical and the most rational known to therapeutics.

No constipation, no diarrhœa, complete assimilation.

Take only the GENUINE IRON OF RABUTEAU of

CLIN & CO., Paris.

SOLUTION OF THE SALICYLATE OF SODA OF DOCTOR CLIN.

Laureate of the Paris Faculty of Medicine (MONTYON PRIZE).

Dr. Clin's Solution, always identical in its composition, and of an agreeable taste, permits the easy administration of *pure Salicylate of Soda*, and the variation of the dose in accordance with the indications presented.

"The *Salicylate of Soda* used by **Clin** is of perfect purity, "and is prepared with the greatest care; it is a medicament "in which we may have every confidence."

—*Paris Society of Medicine, Meeting of Feb. 8th, 1879.*

Clin's Solution, very exactly mixed, contains: 2 grammes of *Salicylate of Soda* per tablespoonful, 50 centigrammes of *Salicylate of Soda* per teaspoonful.

Paris—CLIN & CO.—Paris

AND BY ALL DRUGGISTS.

AND OF ALL DRUGGISTS.

NEURALGIAS

PILLS OF DR. MOUSSETTE.

The **Moussette Pills** of aconitine and quinium, calm or cure *Gastralgia, Hemicrania, Headache, Sciatica*, and the most obstinate Neuralgias.

"The sedative action exerted by the **Moussette Pills** "upon the apparatus of the sanguineous circulation by the "intermediation of the vaso-motor nerves, indicates their "use in *neuralgias of the trigemini nerves*, (fifth pair), *con-* "*gestive neuralgias*, and *painful and inflammatory Rheumatismal* "*affections*."

"Aconitine produces marvelous effects in the treatment "of *facial neuralgias* when they are not symptomatic of "intracranial tumor."—*Society of Biology of Paris, Meeting* "*of the 28th February, 1880.*

DOSE—Take 3 to 6 pills during the twenty-four hours.

ACCEPT ONLY THE GENUINE MOUSSETTE PILLS OF

CLIN & CO.,—Paris.

GRAND NATIONAL PRIZE OF 16,600 FRANCS,

QUINA-LAROCHE

This meritorious **Elixir, QUINA-LAROCHE,** is prepared from the three Cinchonas; it is an agreeable and doubtless highly efficacious remedy.

—*The Lancet.*

VINOUS ELIXIR,

A STIMULATING RESTORATIVE

—AND—

ANTI-FEBRILE TONIC.

QUINA-LAROCHE under the form of a vinous **Elixir** contains the totality of the numerous principles of the three Cinchona barks. It is a preparation which renders great services to Therapeutics.—Extract of the *Gazette des Hôpitaux*, Paris.

FAR SUPERIOR TO ALL ORDINARY CINCHONA WINES.

LAROCHE'S QUINA, tried by the Academy of Medicine of Paris, is a specially prepared COMPOUND EXTRACT of Quinquina, a careful analysis, confirmed by experience, has shown that most of the wines and syrups hitherto used have not contained all the properties of this precious bark, of these some, although beneficial, are altogether lost, while many preparations contain but half the properties of the bark in varying proportions.

MR. LAROCHE, by his peculiar method, has succeeded in extracting all the active principles of the quinquina, combining these with *Catalan Wine* forming an Elixir free from the disagreeable bitterness of other similar preparations. Practitioners have found triple advantages in the use of this Elixir, it is a *strong tonic*, is easily administered, and perfectly harmless, being free from the unpleasant effects of Quinine.

THE FERRUGINOUS QUINA-LAROCHE is the invigorating tonic *par excellence*, having the advantage of being easily assimilated by the gastric juice; without, in any way, deranging the action of the digestive organs, proving itself to be a most efficacious remedy in cases of impoverishment of the blood, ANÆMIA, CHLOROSIS, INTESTINAL HÆMORRHAGE, CASTRALGIA, EXHAUSTION, ETC., ETC.

PARIS.—22 RUE DROUOT.—PARIS.

E. FOUGERA & CO., New York,

Sole Agents for the United States for the above Preparations.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.

For Sale.

THE JEFFERSON MEDICAL COLLEGE

OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

Books for our Subscribers.

WHAT IS THOUGHT OF THEM.

HEATH'S DICTIONARY OF PRACTICAL SURGERY.

C. B. Porter, M. D., Boston, Mass., says: "A most excellent book for the library of the surgeon, and especially for the country practitioner; as a book of reference it is so concise and at the same time so complete."

N. Senn, M. D., College of Physicians and Surgeons, Milwaukee, says: "As a means of ready reference for the student and busy practitioner this book stands unexcelled."

Prof. E. H. Gregory, St. Louis Medical College, St. Louis, says: "I have examined the book, and find it a most valuable addition to my library. I am sure it will meet the favor of the surgical profession."

LEIDY'S HUMAN ANATOMY.

The Lancet-Clinic, Cincinnati, O., says: "Professor Leidy again presents to medical practitioners and students a treatise on human anatomy that at once commands the attention and admiration of all who are at all familiar with the subject. Most of the plates are original, and in common with the text are very beautiful to behold. The work is a complete illustration of the method of teaching anatomy adopted by a leading scientist, and one of America's best known professors of anatomy. This is one of the books that should be in the library of every practitioner of medicine and surgery."

The Medical Advance, Ann Arbor, Mich., says: "The student can master and retain a practical knowledge of anatomy in a shorter time and with less hard work from this text-book than from any other work extant, and it has been our privilege to teach anatomy for several years."

BYFORD'S DISEASES OF WOMEN.

The Boston Medical and Surgical Journal says: "It is a satisfaction to observe the discussion of certain topics which are often neglected by writers, notably of the sympathetic symptoms of organs apparently disconnected with the uterus, for which he will receive the thanks of the younger members of the profession. Another topic very widely treated is that of Constipation in its relation to uterine diseases. All the other topics which should have a place in a work of this kind have been fully and properly treated."

The Cincinnati Lancet-Clinic says: "The book is eminently practical and instructive. Its suggestions for treatment are well up with the times, mostly judicious, conservative, and valuable, and the whole amply repays for thorough perusal."

The St. Louis Courier of Medicine says: "The work of a representative Western practitioner and professor, and is a thoroughly practical work."

The Virginia Medical Monthly says: "We take pleasure in recommending it to every student and physician desirous of obtaining a standard work on Gynæcology."

The Chicago Medical Journal and Examiner says: "The chapter on puberty should be carefully studied by every physician, teacher, and mother in the land. . . . Its style is clear, but concise, and always practical, and shows the author to be, as we all know, an experienced teacher. The work as a whole is most valuable, both to the student and practitioner."

Gaillard's Medical Journal says: "It is replete with good judgment, broad and practical views. . . . The illustrations are excellent."

FOWLER'S DICTIONARY OF PRACTICAL MEDICINE.

The Medical News says: "For those who do not wish to purchase the much larger book of Quain, or who wish comparatively recent information concerning medical subjects in a somewhat narrow space, the book will certainly prove of value, and we heartily recommend it as one which will give a full return for the money invested in the purchase."

The London Lancet says: "What the writers know they tell simply and plainly, and generally manage to put it in a short compass, and, what is more, the treatment that is recommended is clearly and sufficientiy set forth. . . . We can heartily congratulate the editor and his colleagues on having admirably fulfilled their purpose, viz., to produce a first-rate dictionary of medicine, at once scientific and practical, which well deserve the success we have no doubt it will meet with."

JACOBSON'S OPERATIONS OF SURGERY.

The Medical and Surgical Reporter says: "This handsome book is one of the most admirable works on operative surgery which we have seen for a long time. The author has brought to its preparation a large observation and experience, and a very thorough acquaintance with the methods of other surgeons. His book is comprehensive and his directions are clear and reliable. It is gratifying to an American reader to find that full justice is done to the work of American surgeons by Mr. Jacobson, and that his book bears no marks of the distance which stretches between his land and ours. This is as it should be, and is no less an element in the excellence of the technical worth of his book than it is an evidence of the cosmopolitan character of good scientific work."

CAZEAUX & TARNIER'S MIDWIFERY. With Appendix by MUNDÉ.

The Memphis Medical Monthly says: "Cazeaux's Obstetrics was authority during our student life, and has been generally recognized as authority from the publication of the first edition to the present. We cannot do more than to fully endorse the following from the pen of T. Gallard Thomas, M. D; 'I have examined the last edition of Cazeaux & Tarnier's Theory and Practice of Obstetrics, and pronounce it practical, and just what is needed by every practitioner. I highly recommend the work. This work should be prominent in every library.'"

Dr. Wm. L. Lusk says: "Cazeaux's Midwifery will always remain an inexhaustible mine of information, and I rejoice to see it once more accessible to the profession in a new and attractive dress."

Dr. Wm. Goodell says: "I deem Cazeaux & Tarnier's Obstetrics the best yet published."

The Denver Medical Times says: "It is needless to say anything in praise of this work. Cazeaux's Obstetrics is a classical work, and Tarnier is one of the best known French writers on Obstetrics. The whole has been brought up to date by the appendix of Prof. Mundé, and altogether it makes a very complete and practical treatise on the subject, unsurpassed if not unequalled by any work with which we are acquainted. Especially valuable are the signs of delivery in the dead body and of live and still-births. The chapter on antisepsis and on puerperal septicemia are also worthy of mention."

THOMAS'S MEDICAL DICTIONARY.

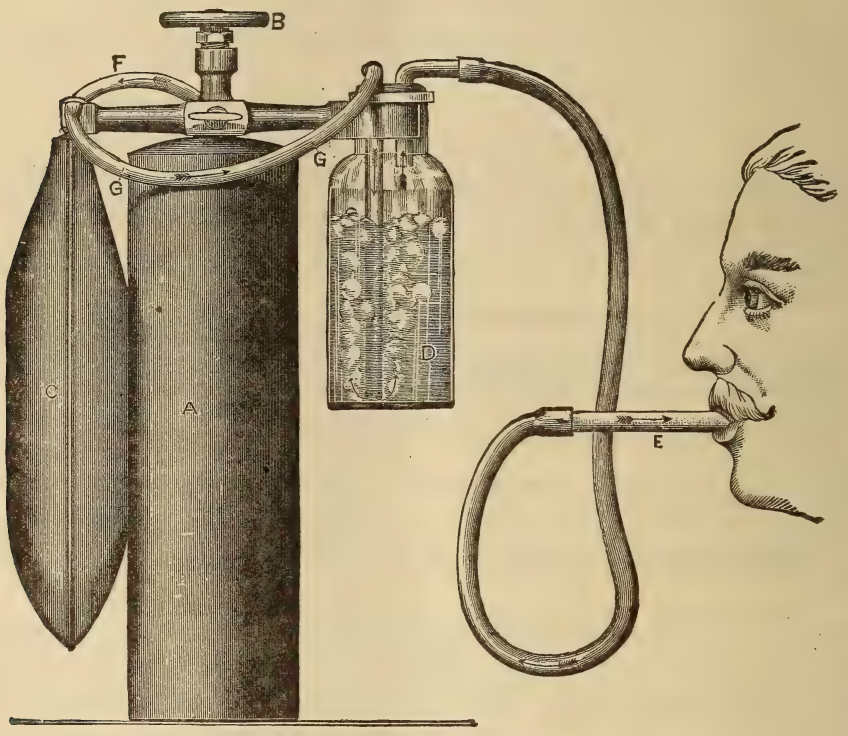
Prof. A. F. Patton, College of Physicians and Surgeons, Boston, Mass., says: "It is just the book for a medical or any other student, and it should be in the office of every physician. This dictionary supplies a place that has never been filled. I have looked it through and find all the new words that I have sought."

The St. Joseph Medical Herald says: "No better testimonial to the value of the work can be given than the following from Dr. J. Gibbon Hunt, the distinguished microscopist: 'To me the work is invaluable. I am astonished at its fullness of all recent words which the modern advance of medical science has introduced. Of course, I cannot conceive the learning and great labor which could edit such a complete, thorough, and admirable volume.' We can add nothing further save that the book should be in the hands of every physician and every student in the land."

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S
LITHIATED HYDRANGEA
KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

FRENCH, CAVE & CO.

(SUCCESSORS TO FRENCH, RICHARDS & CO.),

PHILADELPHIA,

WILL continue the manufacture of the Fine Pharmaceutical Products made by the late firm at the present laboratory, **16 and 18 North Tenth Street, Philadelphia.**

Physicians who have prescribed these preparations can rest assured that the high standard of quality which has made for these products a reputation for consistent strength and purity will be strictly maintained in the future, and the physician can always prescribe our preparations and depend on uniform results.

To those physicians who have not yet prescribed our products, we request them to send to us their address and we will forward by **EXPRESS, PREPAID,** a line of samples free for trial.

Physicians' Price-List and Formulary sent by mail on application.

Champagne ANALYZED

Of Interest to all Medical Practitioners.

WHAT IS SAID BY

THOMAS KING CHAMBERS, M.D., F.R.C.P.
R. OGDEN DOREMUS, M.D.
F. W. PAVY, M.D., F.R.S.

"Champagne, with a minimum of alcohol, is by far the wholesomest, and possesses remarkable exhilarating power."—THOMAS KING CHAMBERS, M.D., F.R.C.P.

"Having occasion to investigate the question of wholesome beverages, I have made a chemical analysis of the most prominent brands of Champagne. I find G. H. Mumm & Co.'s Extra Dry to contain, in a marked degree, less alcohol than the others. I therefore most cordially commend it not only for its purity but as the most wholesome of the Champagnes."—R. OGDEN DOREMUS, M.D., *Professor of Chemistry, Bellevue Hospital Medical College, New York.*

"Champagne, while only possessing the alcoholic strength of natural wines, is useful for exciting the flagging powers in case of exhaustion."—F. W. PAVY, M.D., F.R.S., *Lecturer on Physiology at Guy's Hospital, London.*

The remarkable vintage of 1884 of **G. H. MUMM & CO.'S EXTRA DRY CHAMPAGNE,** the finest for a number of years.
Pronounced by connoisseurs unsurpassed for excellence and bouquet.

FRED'K DE BARY & CO., New York,

SOLE AGENTS IN THE UNITED STATES AND CANADA.

GOUDRON DE BLOUNT

PREPARED FROM THE GENUINE CAROLINA TAR.

DOSE.—One fluid drachm four or more times a day (as indicated), either full strength, diluted, or, in combination.

INDICATIONS.—Chronic and acute affections of the Air Passages, Coughs, Colds, Bronchitis, Asthma and Consumption.

WILLIAM MURRELL, M.D., F.R.C.P.,

Lecturer on Pharmacology and Therapeutics at the Westminster Hospital; Examiner in Materia Medica to the Royal College of Physicians of London; Fellow of the Medico-Chirurgical College of Philadelphia,

Says:—"I have used with success 'Goudron de Blount.' The results have been good, and the preparation is popular with patients."

PREPARED EXCLUSIVELY FOR PHYSICIANS' PRESCRIPTIONS BY

R. E. BLOUNT, 33 RUE ST. ROCH, PARIS.

17,670,000 BOTTLES FILLED IN 1890.

Apollinaris

"THE QUEEN OF TABLE WATERS."

"The APOLLINARIS SPRING yields enough water not only for PRESENT REQUIREMENTS but also for those of a FUTURE which is STILL REMOTE.

"The EXISTING SUPPLY is ADEQUATE for FILLING FORTY MILLION quart bottles YEARLY.

"The VOLUME of GAS is so GREAT that it is dangerous to approach the SPRING on a windless day."—THE TIMES, LONDON, 20th September, 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

BOUDAULT'S PEPSINE

The only Pepsine used in the Hospitals of Paris for the last Thirty Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 187 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy everyone that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of four, eight, and sixteen ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE

FORMULA OF DR. CORVISART.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of Powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in bottles of eight ounces.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium).

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Necker Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Professor Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and, if certain preliminaries are observed, success will be insured.

Sold only in bottles containing one dose.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of Alcoholic Stimulants and Raw Meat.

This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air-passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully prepared formulas for use.

RETAIL PRICE, COMPLETE, $2.50.

☞ A liberal discount allowed to the trade and profession. For descriptive pamphlet or other information address

E. FOUGERA & CO., 30 North William St., New York.

Sole Agents for the above Preparations.

Constipation.

Pavara Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle (25 pills), 25c.; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Please mention this Journal.

FRAUD.

Unscrupulous parties are selling an inferior Wine, calling it Royal Tokay, thus profiting by the numberless Medical Editorials written about our genuine product. The Wine cannot be used as a substitute for ours, and many physicians have unjustly blamed us for damage done, imagining they were securing our Wine, which they had already tested with complete satisfaction. Your patients will not secure the Wine you prescribe unless you specify CALVICO TOKAY, by which name it will hereafter be known.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. **A NON-ALCOHOLIC LIQUID.** WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Conorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

PHILADELPHIA POLYCLINIC AND COLLEGE FOR GRADUATES IN MEDICINE.

THE POLYCLINIC HOSPITAL,

NORTHWEST CORNER BROAD AND LOMBARD STS.

REGULAR SESSIONS RECOMMENCE SEPT. 15TH.

Pupils may begin at any time. Tickets good for Six Weeks' Daily Clinics from date of issue or One Clinic Weekly, for three months.

PRACTICAL, INDIVIDUAL INSTRUCTION, TO PHYSICIANS ONLY, IN ALL BRANCHES OF MEDICINE AND SURGERY.

FOR ANNOUNCEMENT, ADDRESS,
SOLOMON SOLIS-COHEN, M.D., SECRETARY.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.

SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,

W. BAKER & CO., Dorchester, Mass.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

"The Hygeia"

A PRIVATE HOME HOSPITAL,

SITUATED IN A PLEASANT AND CONVENIENT PART OF

SAN FRANCISCO.

Furnished in ELEGANCE and fully EQUIPPED WITH EVERY APPLIANCE required for the Treatment and Comfort of Patients.

Correspondence Solicited from physicians sending patients to this coast. References from the highest in the profession in this city. Special advantages for genito-urinary and rectal diseases, and for mild narcotic habitués.

C. C. VANDERBECK, M. D., PH.D.,

PHYSICIAN IN CHARGE,

216 Leavenworth Street.

CONSULTANTS AND REFERENCES:—Dr. J. Rosenstirn, Surgery; Dr. J. D. Arnold, Throat Diseases; Dr. D. W. Montgomery, Skin Diseases and Microscopist; Dr. Martin Regensburger, Genito-urinary; Dr. Alfred Perry, General Medicine; Dr. Chas. Von Hoffmann, Gynecology; Dr. B. Marshall, etc.

St. Vincent Home Maternity Hospital,

70th Street and Woodland Avenue,

(PASCHALL STATION) PHILADELPHIA.

Conducted by the Sisters of Charity.

INFANTS and Children under two years of age received.

Patients for MATERNITY DEPARTMENT accommodated according to their means.

IN THE WARDS terms range from $5.00 to $8.00 per week.

IN THE PRIVATE ROOMS terms range from $10.00 to $20.00 per week.

For further information apply to or address

THE SISTER IN CHARGE,

PASCHALVILLE,

PHILADELPHIA, - PA.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)		Soda.....1-3 Grains.	
Distilled Water.....35 "		Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.		Hyocholic Acid.....1-90 "	

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥i to f℥ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN,

CHEMIST,

WALNUT & THIRTEENTH STREETS,

PHILADELPHIA.

THE GENUINE IMPORTED NATURAL

CARLSBAD SPRUDEL SALT

AND

CARLSBAD MINERAL WATERS

Are Highly Recommended for

1. **Diseases of the Stomach**—Chronic catarrh of the stomach, cardialgia, ulcer of the stomach.

2. **Diseases of the Intestines**—Chronic constipation, chronic diarrhœa.

3. **Diseases of the Spleen**—Chronic hyperæmia of the spleen, tumors of the spleen, arising after intermittent fever, typhus, etc., and the effects of a residence in marshy districts or hot climates.

The genuine imported Carlsbad Sprudel Salt is put up in round bottles like the above cut. Each bottle comes in a paper cartoon with the seal of the City of Carlsbad, and signature of "Eisner & Mendelson Co.," sole Agents, on the neck of every bottle and on the outside cartoon.

4. **Liver Diseases**—Hyperæmia of the liver, resulting from agglomeration of the blood in the veins, if it does not originate in organic defects; fat liver, jaundice, produced by catarrh of the passages of the bile, or by liver complaint in consequence of violent emotions; gallstones.

5. **Diseases of the Kidneys and Bladder**—Gravel, nephritic stones, sand, stone in the bladder—chronic catarrh of the kidneys and bladder—albuminuria.

6. **Diseases of the Prostate**—Chronic hyperæmia of the prostate, resulting from interrupted circulation in the bowels, constipation, hemorrhoids, etc.

7. **Chronic Catarrh of the Womb,** produced by menstrual disturbances, hemorrhoids, and the different consequences of interrupted circulation in the bowels.

8. **Gout,** especially in the early stages.

9. **Diabetes Mellitus**—By the use of the Carlsbad Thermal Waters, not only the clinical phenomena of this disease (the tormenting thirst, violent hunger, dryness of the skin) disappear in a very short time, but it also considerably diminishes the secretion of sugar in the urine, and frequently causes it to disappear altogether.

Diseases of the stomach are best treated with the Carlsbad Water, whereas the Carlsbad Sprudel Salt (powder form) is to be preferred in diseases of the viscera, such as intestinal canal, spleen, kidneys, inadiposis, etc.

PAMPHLETS MAILED ON APPLICATION.

EISNER & MENDELSON CO.,

SOLE AGENTS,

6 BARCLAY STREET, NEW YORK.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed—is the best check upon substitution.

FERRO-SALICYLATA

LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from Oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 minims.

Not Sold in Bulk.

ELIXIR

Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1–4 gr.
Sanguinarina Nitrate,	1–64 gr.
Morphine Acetate,	1–16 gr.
Ammonium Chloride,	1–2 gr.
Chloroform,	1–2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.—*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken-down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especiallywhere the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggists throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS.—*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh, and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City, Richards Drug Co., San Francisco, Agents for Pacific Coast. Prices-current and printed matter cheerfully supplied.

Address, MEDICAL AND SURGICAL REPORTER, P. O. Box 843, Philadelphia.

MESSRS. SNOW, CHURCH & CO.,

LAW AND COLLECTION OFFICES,

608 & 610 Chestnut Street,

PHILADELPHIA.

GENTLEMEN:—Your management of the collections of the MEDICAL AND SURGICAL REPORTER during the past year has been so admirable and so much more successful than that of any agency with which I have dealt heretofore, that I renew my contract with you for the coming year with great pleasure.

The Publisher of the Medical and Surgical Reporter.

Philadelphia,

September 25, 1890.

MEDICO-CHIRURGICAL COLLEGE

OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

HENRY LEFFMAN, M. D.,

Analytical Chemist and Expert,

715 Walnut Street,

PHILADELPHIA, October 26, 1889.

MESSRS. EISNER & MENDELSON:

SIRS:—In response to inquiries made concerning the relative merits of the Johann Hoff's Malt Extract, and that sold under the name of Tarrant's Hoff's Extract, I may state as follows:

"That I have, during the past eighteen months, made a number of examinations of the principal forms of Malt Extract in the market, and have, among other matters, satisfied myself that the Johann Hoff's Malt Extract, as imported by you, is a Genuine Extract of Malt."

The judgment of the value of a liquid preparation of Malt will be largely based on the percentage of Alcohol, and the presence of any preservative, especially Salicylic Acid. It may be justly said that the less Alcohol found the better, provided its place is not taken by some more objectionable substance. Under such considerations, the Johann Hoff's Malt Extract possesses decided advantages over the preparation sold under the name of Tarrant's Hoff's Extract, in the fact that the former contains three and one-half per cent. of Alcohol, while the latter has yielded, in two samples, four and three-quarters and five per cent. respectively.

Further, I have noted in a number of examinations of the latter article—Tarrant's Extract—the presence of Salicylic Acid, while I have never, in repeated examinations of the Eisner & Mendelson Johann Hoff's Extract, found any trace of such preservative. The effects of Salicylic Acid have been extensively studied, and the unanimous opinion of sanitary chemists is, that it is very objectionable as an addition to any form of food or drink, and especially objectionable in Malt Extract. From some observations made in my own laboratory, and published in the *Polyclinic* in May, 1888, it appears that not only does Salicylic Acid wholly suspend the action of Diastase, to which Malt owes its starch-converting power, but that the starch-digesting power of the pancreatic secretion is also wholly suspended by it. It thus appears the addition of this body is to render the Extract not only inactive so far as its own function is concerned, but it introduces into the system an injurious substance, and one which interferes with an important function. Sanitary authorities, in various parts of Europe, have given from time to time much attention to the now indiscriminate use of this acid, and have all, so far as I am aware, condemned its employment in any article of food or drink. For this reason, among others as above noted, I am of the opinion that the Genuine Johann Hoff's Malt Extract, as imported by Eisner & Mendelson, is to be preferred. I may say that all the examinations were made on samples obtained in the open market, and in the bottles as originally imported. Yours,

HENRY LEFFMAN, M. D.,

Professor Chemistry Woman's Medical College, and Penna. College Dental Surgery; Food Inspector, Pennsylvania Board of Agriculture.

BOOKS FOR OUR SUBSCRIBERS

BY SPECIAL ARRANGEMENT with the publishers we are able at this time to offer the following first-class and very valuable books (last editions) at a very low price, when taken in connection with paid-up subscriptions. Subscribers will see that we have put in this list thoroughly good books. See Adv. Page v.

Or, **For $6.00,** any one of the above Nursing Books and **THOMSON'S (Sir Henry) SURGERY OF THE URINARY ORGANS.** Some important points connected with the Surgery of the Urinary Organs. Illustrated. Cloth, ... **$1.25**

Books for our Subscribers.

WHAT IS THOUGHT OF THEM.

HEATH'S DICTIONARY OF PRACTICAL SURGERY.

C. B. Porter, M. D., Boston, Mass., says: "A most excellent book for the library of the surgeon, and especially for the country practitioner; as a book of reference it is so concise and at the same time so complete."

N. Senn, M. D., College of Physicians and Surgeons, Milwaukee, says: "As a means of ready reference for the student and busy practitioner this book stands unexcelled."

Prof. E. H. Gregory, St. Louis Medical College, St. Louis, says: "I have examined the book, and find it a most valuable addition to my library. I am sure it will meet the favor of the surgical profession."

LEIDY'S HUMAN ANATOMY.

The Lancet-Clinic, Cincinnati, O., says: "Professor Leidy again presents to medical practitioners and students a treatise on human anatomy that at once commands the attention and admiration of all who are at all familiar with the subject. Most of the plates are original, and in common with the text are very beautiful to behold. The work is a complete illustration of the method of teaching anatomy adopted by a leading scientist, and one of America's best known professors of anatomy. This is one of the books that should be in the library of every practitioner of medicine and surgery."

The Medical Advance, Ann Arbor, Mich., says: "The student can master and retain a practical knowledge of anatomy in a shorter time and with less hard work from this text-book than from any other work extant, and it has been our privilege to teach anatomy for several years."

BYFORD'S DISEASES OF WOMEN.

The Boston Medical and Surgical Journal says: "It is a satisfaction to observe the discussion of certain topics which are often neglected by writers, notably of the sympathetic symptoms of organs apparently disconnected with the uterus, for which he will receive the thanks of the younger members of the profession. Another topic very widely treated is that of Constipation in its relation to uterine diseases. All the other topics which should have a place in a work of this kind have been fully and properly treated."

The Cincinnati Lancet-Clinic says: "The book is eminently practical and instructive. Its suggestions for treatment are well up with the times, mostly judicious, conservative, and valuable, and the whole amply repays for thorough perusal."

The St. Louis Courier of Medicine says: "The work of a representative Western practitioner and professor, and is a thoroughly practical work."

The Virginia Medical Monthly says: "We take pleasure in recommending it to every student and physician desirous of obtaining a standard work on Gynæcology."

The Chicago Medical Journal and Examiner says: "The chapter on puberty should be carefully studied by every physician, teacher, and mother in the land. . . . Its style is clear, but concise, and always practical, and shows the author to be, as we all know, an experienced teacher. The work as a whole is most valuable, both to the student and practitioner."

Gaillard's Medical Journal says: "It is replete with good judgment, broad and practical views. . . . The illustrations are excellent."

FOWLER'S DICTIONARY OF PRACTICAL MEDICINE.

The Medical News says: "For those who do not wish to purchase the much larger book of Quain, or who wish comparatively recent information concerning medical subjects in a somewhat narrow space, the book will certainly prove of value, and we heartily recommend it as one which will give a full return for the money invested in the purchase."

The London Lancet says: "What the writers know they tell simply and plainly, and generally manage to put it in a short compass, and, what is more, the treatment that is recommended is clearly and sufficientiy set forth. . . . We can heartily congratulate the editor and his colleagues on having admirably fulfilled their purpose, viz., to produce a first-rate dictionary of medicine, at once scientific and practical, which well deserve the success we have no doubt it will meet with."

JACOBSON'S OPERATIONS OF SURGERY.

The Medical and Surgical Reporter says: "This handsome book is one of the most admirable works on operative surgery which we have seen for a long time. The author has brought to its preparation a large observation and experience, and a very thorough acquaintance with the methods of other surgeons. His book is comprehensive and his directions are clear and reliable. It is gratifying to an American reader to find that full justice is done to the work of American surgeons by Mr. Jacobson, and that his book bears no marks of the distance which stretches between his land and ours. This is as it should be, and is no less an element in the excellence of the technical worth of his book than it is an evidence of the cosmopolitan character of good scientific work."

CAZEAUX & TARNIER'S MIDWIFERY. With Appendix by MUNDÉ.

The Memphis Medical Monthly says: "Cazeaux's Obstetrics was authority during our student life, and has been generally recognized as authority from the publication of the first edition to the present. We cannot do more than to fully endorse the following from the pen of T. Gallard Thomas, M. D.; 'I have examined the last edition of Cazeaux & Tarnier's Theory and Practice of Obstetrics, and pronounce it practical, and just what is needed by every practitioner. I highly recommend the work. This work should be prominent in every library.'"

Dr. Wm. L. Lusk says: "Cazeaux's Midwifery will always remain an inexhaustible mine of information, and I rejoice to see it once more accessible to the profession in a new and attractive dress."

Dr. Wm. Goodell says: "I deem Cazeaux & Tarnier's Obstetrics the best yet published."

The Denver Medical Times says: "It is needless to say anything in praise of this work. Cazeaux's Obstetrics is a classical work, and Tarnier is one of the best known French writers on Obstetrics. The whole has been brought up to date by the appendix of Prof. Mundé, and altogether it makes a very complete and practical treatise on the subject, unsurpassed if not unequalled by any work with which we are acquainted. Especially valuable are the signs of delivery in the dead body and of live and still-births. The chapter on antisepsis and on puerperal septicemia are also worthy of mention."

THOMAS'S MEDICAL DICTIONARY.

Prof. A. F. Patton, College of Physicians and Surgeons, Boston, Mass., says: "It is just the book for a medical or any other student, and it should be in the office of every physician. This dictionary supplies a place that has never been filled. I have looked it through and find all the new words that I have sought."

The St. Joseph Medical Herald says: "No better testimonial to the value of the work can be given than the following from Dr. J. Gibbon Hunt, the distinguished microscopist: 'To me the work is invaluable. I am astonished at its fullness of all recent words which the modern advance of medical science has introduced. Of course, I cannot conceive the learning and great labor which could edit such a complete, thorough, and admirable volume.' We can add nothing further save that the book should be in the hands of every physician and every student in the land."

Manufacturer, Importer and Exporter of Surgical Instruments,

No. 121 SOUTH ELEVENTH STREET, PHILADELPHIA.

THE JEFFERSON MEDICAL COLLEGE

OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

DR. MASSEY'S PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,

Physician in Charge.

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

RABUTEAU'S DRAGEES OF IRON

Laureate of the Institute of France.—Prize in Therapeutics.

The studies made by the Physicians of the Hospitals have demonstrated that the **Genuine Dragees of Iron of Rabuteau** are superior to all other preparations of Iron in cases of *Chlorosis, Anæmia, Leucorrhœa, Debility, Exhaustion, Convalescence, Weakness of Children*, and the maladies caused by the Impoverishment and Alteration of the blood after periods of fatigue, watching, and excesses of any kind.

TAKE 4 TO 6 DRAGEES DAILY.

Rabuteau's Elixir of Iron is recommended to those persons who may be unable to swallow the Dragees. Dose —*A small wineglassful with meals.*

Rabuteau's Syrup of Iron is specially designed for children. Chalybeate medication, by means of **Rabuteau's Iron**, is the most economical and the most rational known to therapeutics.

No constipation, no diarrhœa, complete assimilation.

Take only the GENUINE IRON OF RABUTEAU of

CLIN & CO., Paris.

SOLUTION OF THE SALICYLATE OF SODA OF DOCTOR CLIN.

Laureate of the Paris Faculty of Medicine (MONTYON PRIZE).

Dr. Clin's Solution, always identical in its composition, and of an agreeable taste, permits the easy administration of *pure Salicylate of Soda*, and the variation of the dose in accordance with the indications presented.

"The *Salicylate of Soda* used by **Clin** is of perfect purity, "and is prepared with the greatest care; it is a medicament "in which we may have every confidence."

—*Paris Society of Medicine, Meeting of Feb. 8th, 1879.*

Clin's Solution, very exactly mixed, contains: 2 grammes of *Salicylate of Soda* per tablespoonful, 50 centigrammes of *Salicylate of Soda* per teaspoonful.

GRAND NATIONAL PRIZE OF 16,600 FRANCS,

QUINA-LAROCHE

This meritorious **Elixir, QUINA-LAROCHE,** is prepared from the **three** Cinchonas; it is an agreeable and doubtless highly efficacious remedy.

—*The Lancet.*

VINOUS ELIXIR,

A STIMULATING RESTORATIVE

—AND—

ANTI-FEBRILE TONIC.

QUINA-LAROCHE under the form of a vinous **Elixir** contains the totality of the numerous principles of the **three** Cinchona barks. It is a preparation which renders great services to Therapeutics.—Extract of the *Gazette des Hôpitaux*, Paris.

FAR SUPERIOR TO ALL ORDINARY CINCHONA WINES.

LAROCHE'S QUINA, tried by the Academy of Medicine of Paris, is a specially prepared COMPOUND EXTRACT of Quinquina, a careful analysis, confirmed by experience, has shown that most of the wines and syrups hitherto used have not contained all the properties of this precious bark, of these some, although beneficial, are altogether lost, while many preparations contain but half the properties of the bark in varying proportions.

MR. LAROCHE, by his peculiar method, has succeeded in extracting all the active principles of the quinquina, combining these with *Catalan Wine* forming an Elixir free from the disagreeable bitterness of other similar preparations. Practitioners have found triple advantages in the use of this Elixir, it is a *strong tonic*, is easily administered, and perfectly harmless, being free from the unpleasant effects of Quinine.

THE FERRUGINOUS QUINA-LAROCHE is the invigorating tonic *par excellence*, having the advantage of being easily assimilated by the gastric juice; without, in any way, deranging the action of the digestive organs, proving itself to be a most efficacious remedy in cases of impoverishment of the blood, ANÆMIA, CHLOROSIS, INTESTINAL HÆMORRHAGE, CASTRALGIA, EXHAUSTION, ETC., ETC.

PARIS.—22 RUE DROUOT.—PARIS.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure. They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC. PROPHYLACTIC. DEODORANT.

LISTERINE

NON-TOXIC. NON-IRRITANT. NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. **A NON-ALCOHOLIC LIQUID.** WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

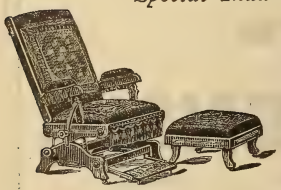
THE RIP VAN WINKLE RECLINING ROCKER.

OFFICE AND GYNÆCOLOGICAL CHAIR COMBINED.

Special Inducements and Extra Discount Given to Physicians.



No. 1.

It is the most wonderful Chair in the world. You can sit in the Chair with your feet on the foot-rest and rock yourself, and it is impossible for a beholder to tell what makes the Chair rock. It is the finest invalid's Chair in the world.

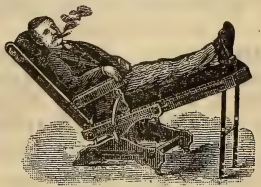
As an **Invalid's Chair,** a person can recline the back by quarter-inches until he lies straight or horizontally, and without taking his weight from the back of the chair in the least, and CAN ROCK AS WELL LYING DOWN AS SITTING UP. Upholstered in Plush, Leather or Wilton Rugs. This Chair has over 200 changes of position, and sells for $25.00.

No. 2.

This Chair can be converted from a splendid Office Chair (see cuts Nos. 1 and 3) into one of the most complete Gynæcological Chairs in a half minnte, (see cuts 2, 4, and 5).

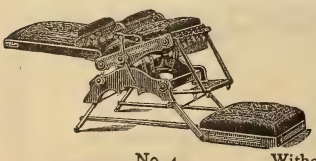
As a Gynæcological Chair it will take all the positions of the high-priced chairs costing two and three times what this one does.

The Rip Van Winkle Chair has over 200 changes of position. Every chair fully warranted.



No. 3.

This Chair is sold with or without the Gynæcological attachment, as desired. It is *unquestionably* the most complete and comfortable Reclining or Lounging Chair ever made. I make a special price to physicians, and also give them a handsome commission on all orders I receive through them for Chairs for their patients. No Chair in the world is so well adapted to ladies suffering from female weakness, and the commission I give on your orders will soon pay for your own Chair.



No. 4.

The Chair makes 5 pieces of Furniture.

I have attachments by which it can be converted into an Invalid's Rolling Chair in one minute. Parties can get these attachments from factory at any time. Send for full particulars, price-list, and illustrated catalogue showing the principal positions and changes. The Catalogue contains the "Legend of Rip Van Winkle."

Without the Gynæcological Attachment these Chairs

No. 5.

Make an Elegant Wedding or Holiday Present.

Manufactured by **P. C. LEWIS,** Box 154, Catskill, N. Y.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

PHILADELPHIA POLYCLINIC AND COLLEGE FOR GRADUATES IN MEDICINE.

THE POLYCLINIC HOSPITAL,

NORTHWEST CORNER BROAD AND LOMBARD STS.

REGULAR SESSIONS RECOMMENCE SEPT. 15TH.

Pupils may begin at any time. Tickets good for Six Weeks' Daily Clinics from date of issue or One Clinic Weekly, for three months.

PRACTICAL, INDIVIDUAL INSTRUCTION, TO PHYSICIANS ONLY, IN ALL BRANCHES OF MEDICINE AND SURGERY.

FOR ANNOUNCEMENT, ADDRESS,
SOLOMON SOLIS-COHEN, M. D., SECRETARY.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.

SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,

D. B. ST. JOHN ROOSA, M. D., LL.D., PRESIDENT. **226 East 20th St., New York City.**

F. E. FARRELL, SUPERINTENDENT.

COLLEGE OF MEDICINE. SYRACUSE UNIVERSITY.

A. CLIFFORD MERCER, M. D., Pathology.
HENRY L. ELSNER, M. D., Clinical Medicine.
FRANK W. MARLOW, M. D., Ophthalmology.

Three Years' Graded Course. Year begins October 7th, 1890, ends in June, 1891.

FIRST YEAR: Anatomy, Physiology, Chemistry, Histology, Materia Medica.
SECOND YEAR: Anatomy, Physiology, Chemistry, Therapeutics, Pathology, Practice, Surgery, Clinical Medicine and Surgery.
THIRD YEAR: Therapeutics, Practice, Surgery, Children, Clinics, Obstetrics, Gynæcology, Forensic Medicine, Ophthalmology, Hygiene.

An experience of seventeen years has demonstrated that a three years' graded course is superior in every respect to an ungraded, unnatural, and cramming course of two winters.

Tuition, $80.00 for each Year. Perpetual Ticket, $200.00. Diploma, $25.00.

For circulars with full information, address

W. H. DUNLAP, M. D., Registrar, SYRACUSE, N. Y.

UNIVERSITY OF PENNSYLVANIA.—Medical Department.

The 125TH ANNUAL WINTER SESSION will begin Wednesday, October 1st, 1890, at 12 M., and will continue seven months. The PRELIMINARY SESSION begins September 22d, 1890, the Spring Term early in May, 1891.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology, with Bedside Instruction in Medicine, Surgery and Gynecology are a part of the regular course and without additional expense.

FACULTY.

JOSEPH LEIDY, M.D., LL.D., Professor of Anatomy.
D. HAYES AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

For Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10.50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.)**

P. S.—The advertising of this article is confined strictly to Medical Journals, and the general verdict of physicians is that if this mixture does not act on a case, it is a difficult matter to find something that will.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

Carried in stock by the principal Wholesale Druggists in the U. S.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M.D.

Ale & Beef

"PEPTONIZED"

(EXTRACT:—BOVIS CUM MALTO.)

Is the identical combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a Perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE "PEPTONIZED" BEEF

is manufactured by Prof. Preston B. Rose, of Chicago, late of the faculty of the University of Michigan.

THE ALE USED IS THE PUREST AND BEST MADE IN AMERICA

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers; also in Typhoid Fever and Dysentery.

Prof. G. A. Liebig says: "A careful chemical examination of the Peptonized Ale and Beef shows a much larger per cent. of nitrogenous blood and muscle-making matter over all other malt extracts, and that it is also rich in Diastase, giving it the power to digest Starch Foods."

PREPARED BY

The Ale and Beef Company,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges. Please mention this journal.

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc., one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point.

MANUFACTURED BY

JOHN WYETH & BROTHER,

PHILADELPHIA, PA.

Therapeutic Points.

Use McArthur's Syrup (Syrup Hypophos. Comp., C. P., McArthur) for Consumption, as it rapidly repairs the waste and restores vigor to the system.

For Tuberculosis in all forms, as it invigorates the tissue cells and enables them to overcome and expel the disease germs.

For Scrofula, as it builds up the tissue walls and thus breaks up the various inflammatory and suppurative processes incident to this diathesis.

For Inflammatory Diseases of the Throat, Bronchial Tubes and Lungs, as its tonic and healing properties are nowhere better manifested than in this class of diseases.

For Rachitis, and all osseous degeneration, as it rapidly repairs bone tissue.

For Teething of Infants, as it furnishes food to the growing teeth. For the same reason you should give it to the nursing mothers and those whose teeth and bones are suffering during pregnancy.

For Chronic Diarrhea, Leucorrhea, Suppurating Discharges and Sores.

For Chronic Alcoholism, the Morphine Habit, Brain Exhaustion, Loss of Memory, Neurasthenia, Spermatorrhea, Impotence, and all derangements of the nervous system. Here, by building up and restoring the nerve tissue it effects a permanent cure, raising the patient from despondency to renewed hope and confidence, from weakness to strength and vigor.

For Uterine Fibroids and all forms of perverted nutrition, where it restores the normal processes of nutrition, and effects a recovery at once gratifying to the patient and satisfactory to the physician.

To obtain the best results, the Syrup should be given for a long time—weeks, months and even years—until the disease is entirely eradicated and the patient no more susceptible to its return than if it "never had occured."

As it is made only for Physicians' prescriptions there are no labels, &c., on the bottle.

We will send our valuable treatise on "The Curability and Treatment of Consumption," free to any physician.

McARTHUR HYPOPHOSPHITE CO.,
BOSTON, MASS.

There is no Nourishment
in Tea or Coffee, but plenty in

COCOA

especially in

VAN HOUTEN'S

THE DRINK QUESTION

is ever coming to the front. What beverage shall we drink to quench thirst? The most popular non-intoxicant is cocoa, which is rapidly supplanting tea and coffee as a national beverage. There are many excellent cocoas, but in advance of all other preparations stands VAN HOUTEN'S which is universally declared to be perfectly pure, free from fat, easily digested, delicious to the taste, nutritious, and a stimulant without any depressing after-effects.

VAN HOUTEN'S COCOA was introduced into the household of the late Emperor of Germany upon high recommendation. The senior physician of the London Court Hospital has used this brand of Cocoa for many years. It is strongly recommended to Students and all whose duties involve much wear and tear, whether mental or physical. For these reasons it has earned the highest encomiums of the leading analysts of the day.

What shall we drink to raise the spirits high?
VAN HOUTEN'S COCOA, is the universal cry!
The purest and most delicious;
The best and most nutritious.

VAN HOUTEN'S COCOA - - - - - "BEST & GOES FARTHEST."

☞ It only needs a single trial to convince any one of the superiority of VAN HOUTEN'S COCOA. Please insist upon your grocer or storekeeper ordering it for you, *and take no substitute.* It is put up in one-quarter, one-half, and one-pound cans. ☞ If not obtainable, enclose 25 cents in stamps or postal note to either VAN HOUTEN & ZOON, 106 Reade Street, New York, or 45 Wabash Avenue, Chicago, and a can will be sent by mail, *if you mention this publication.* Prepared only by VAN HOUTEN & ZOON, Weesp-Holland.

VAN HOUTEN'S COCOA - - - - - "ONCE TRIED, ALWAYS USED."

102

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S
LITHIATED HYDRANGEA
KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

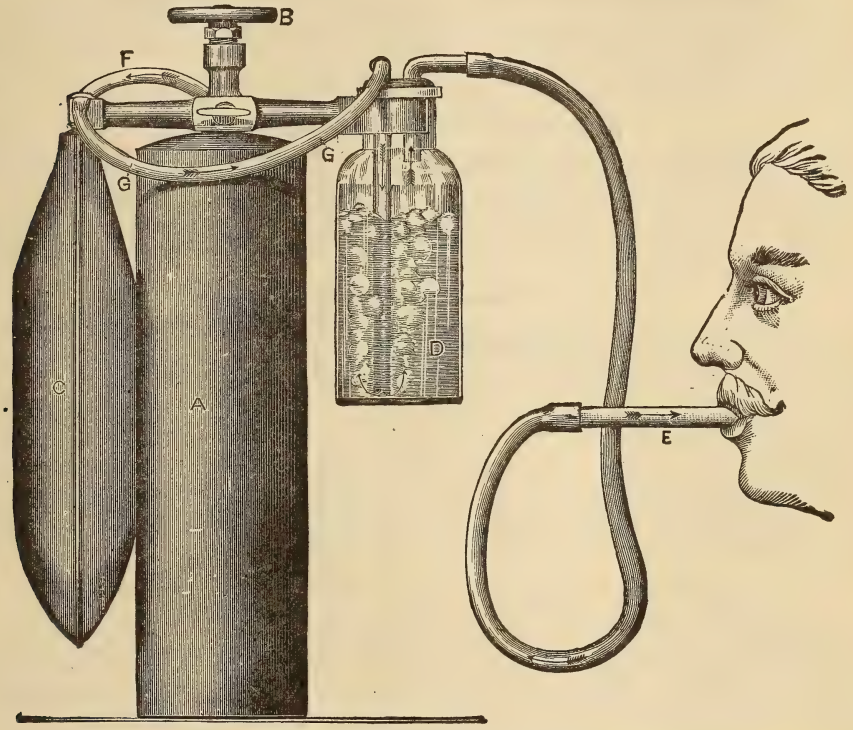
INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	**$13.00**
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	**$25.00**

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

Books for our Subscribers.

WHAT IS THOUGHT OF THEM.

HEATH'S DICTIONARY OF PRACTICAL SURGERY.

C. B. Porter, M. D., Boston, Mass., says: "A most excellent book for the library of the surgeon, and especially for the country practitioner; as a book of reference it is so concise and at the same time so complete."

N. Senn, M. D., College of Physicians and Surgeons, Milwaukee, says: "As a means of ready reference for the student and busy practitioner this book stands unexcelled."

Prof. E. H. Gregory, St. Louis Medical College, St. Louis, says: "I have examined the book, and find it a most valuable addition to my library. I am sure it will meet the favor of the surgical profession."

LEIDY'S HUMAN ANATOMY.

The Lancet-Clinic, Cincinnati, O., says: "Professor Leidy again presents to medical practitioners and students a treatise on human anatomy that at once commands the attention and admiration of all who are at all familiar with the subject. Most of the plates are original, and in common with the text are very beautiful to behold. The work is a complete illustration of the method of teaching anatomy adopted by a leading scientist, and one of America's best known professors of anatomy. This is one of the books that should be in the library of every practitioner of medicine and surgery."

The Medical Advance, Ann Arbor, Mich., says: "The student can master and retain a practical knowledge of anatomy in a shorter time and with less hard work from this text-book than from any other work extant, and it has been our privilege to teach anatomy for several years."

BYFORD'S DISEASES OF WOMEN.

The Boston Medical and Surgical Journal says: "It is a satisfaction to observe the discussion of certain topics which are often neglected by writers, notably of the sympathetic symptoms of organs apparently disconnected with the uterus, for which he will receive the thanks of the younger members of the profession. Another topic very widely treated is that of Constipation in its relation to uterine diseases. All the other topics which should have a place in a work of this kind have been fully and properly treated."

The Cincinnati Lancet-Clinic says: "The book is eminently practical and instructive. Its suggestions for treatment are well up with the times, mostly judicious, conservative, and valuable, and the whole amply repays for thorough perusal."

The St. Louis Courier of Medicine says: "The work of a representative Western practitioner and professor, and is a thoroughly practical work."

The Virginia Medical Monthly says: "We take pleasure in recommending it to every student and physician desirous of obtaining a standard work on Gynæcology."

The Chicago Medical Journal and Examiner says: "The chapter on puberty should be carefully studied by every physician, teacher, and mother in the land. . . . Its style is clear, but concise, and always practical, and shows the author to be, as we all know, an experienced teacher. The work as a whole is most valuable, both to the student and practitioner."

Gaillard's Medical Journal says: "It is replete with good judgment, broad and practical views. . . . The illustrations are excellent."

FOWLER'S DICTIONARY OF PRACTICAL MEDICINE.

The Medical News says: "For those who do not wish to purchase the much larger book of Quain, or who wish comparatively recent information concerning medical subjects in a somewhat narrow space, the book will certainly prove of value, and we heartily recommend it as one which will give a full return for the money invested in the purchase."

The London Lancet says: "What the writers know they tell simply and plainly, and generally manage to put it in a short compass, and, what is more, the treatment that is recommended is clearly and sufficientiy set forth. . . . We can heartily congratulate the editor and his colleagues on having admirably fulfilled their purpose, viz., to produce a first-rate dictionary of medicine, at once scientific and practical, which well deserve the success we have no doubt it will meet with."

JACOBSON'S OPERATIONS OF SURGERY.

The Medical and Surgical Reporter says: "This handsome book is one of the most admirable works on operative surgery which we have seen for a long time. The author has brought to its preparation a large observation and experience, and a very thorough acquaintance with the methods of other surgeons. His book is comprehensive and his directions are clear and reliable. It is gratifying to an American reader to find that full justice is done to the work of American surgeons by Mr. Jacobson, and that his book bears no marks of the distance which stretches between his land and ours. This is as it should be, and is no less an element in the excellence of the technical worth of his book than it is an evidence of the cosmopolitan character of good scientific work."

CAZEAUX & TARNIER'S MIDWIFERY. With Appendix by MUNDÉ.

The Memphis Medical Monthly says: "Cazeaux's Obstetrics was authority during our student life, and has been generally recognized as authority from the publication of the first edition to the present. We cannot do more than to fully endorse the following from the pen of T. Gallard Thomas, M. D.; 'I have examined the last edition of Cazeaux & Tarnier's Theory and Practice of Obstetrics, and pronounce it practical, and just what is needed by every practitioner. I highly recommend the work. This work should be prominent in every library.'"

Dr. Wm. L. Lusk says: "Cazeaux's Midwifery will always remain an inexhaustible mine of information, and I rejoice to see it once more accessible to the profession in a new and attractive dress."

Dr. Wm. Goodell says: "I deem Cazeaux & Tarnier's Obstetrics the best yet published."

The Denver Medical Times says: "It is needless to say anything in praise of this work. Cazeaux's Obstetrics is a classical work, and Tarnier is one of the best known French writers on Obstetrics. The whole has been brought up to date by the appendix of Prof. Mundé, and altogether it makes a very complete and practical treatise on the subject, unsurpassed if not unequalled by any work with which we are acquainted. Especially valuable are the signs of delivery in the dead body and of live and still-births. The chapter on antisepsis and on puerperal septicemia are also worthy of mention."

THOMAS'S MEDICAL DICTIONARY.

Prof. A. F. Patton, College of Physicians and Surgeons, Boston, Mass., says: "It is just the book for a medical or any other student, and it should be in the office of every physician. This dictionary supplies a place that has never been filled. I have looked it through and find all the new words that I have sought."

The St. Joseph Medical Herald says: "No better testimonial to the value of the work can be given than the following from Dr. J. Gibbon Hunt, the distinguished microscopist: 'To me the work is invaluable. I am astonished at its fullness of all recent words which the modern advance of medical science has introduced. Of course, I cannot conceive the learning and great labor which could edit such a complete, thorough, and admirable volume.' We can add nothing further save that the book should be in the hands of every physician and every student in the land."

BOOKS FOR OUR SUBSCRIBERS

BY SPECIAL ARRANGEMENT with the publishers we are able at this time to offer the following first-class and very valuable books (last editions) at a very low price, when taken in connection with paid-up subscriptions. Subscribers will see that we have put in this list thoroughly good books. See Adv. Page ix.

FOR **$10.00**

REPORTER for one year, . . . **$5.00**

HEATH'S DICTIONARY OF PRACTICAL SURGERY. Cloth, . . . **$7.50**

FOR **$ 9.00**

REPORTER for one year, . . . **$5.00**

LEIDY'S HUMAN ANATOMY. By Joseph Leidy, M. D. Cloth, . . **$6.00**

FOR **$ 8.50**

REPORTER for one year, . . . **$5.00**
and any one of the following books—

1.—BYFORD'S DISEASES OF WOMEN. Cloth, ... **$5.00**

3.—JACOBSON'S OPERATIONS OF SURGERY, ... **$5.00**

4.—CAZEAUX & TARNIER'S MIDWIFERY. With Appendix by Munde, . **$5.00**

5.—THOMAS'S MEDICAL DICTIONARY, ... **$5.00**

These works are all in cloth binding, but can be supplied in leather binding for $1.00 additional.

FOR **$ 6.00**

we will send the **REPORTER** for one year, **$5.00**
and any two of the following books:

1.—THE NURSING AND CARE OF THE NERVOUS AND THE INSANE. By Chas. K. Mills, M. D., ... **$1.00**

2.—MATERNITY; INFANCY; CHILDHOOD. By John M. Keating, M. D., . . **$1.00**

3.—OUTLINES FOR THE MANAGEMENT OF DIET; or, The Regulation of Food to the Requirements of Health and the Treatment of Disease. By E. T. Bruen, M.D., . . **$1.00**

4.—FEVER NURSING. Designed for the use of professional and other Nurses. By J. C. Wilson, A. M., M. D., ... **$1.00**

5.—DISEASES AND INJURIES OF THE EAR: Their Prevention and Cure. By Chas. H. Burnett, A. M., M. D., ... **$1.00**

Or, **For $6.00,** any one of the above Nursing Books and **THOMSON'S (Sir Henry) SURGERY OF THE URINARY ORGANS.** Some important points connected with the Surgery of the Urinary Organs. Illustrated. Cloth, ... **$1.25**

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.

JOSEPH ZENTMAYER,

OPTICIAN,

HISTOLOGICAL MICROSCOPES, $65.00.

REPAIRING OF ALL SCIENTIFIC INSTRUMENTS.

STUDENTS' MICROSCOPES $38.00 TO $46.00 COMPLETE.

ILLUSTRATED CATALOGUE ON APPLICATION.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

EXCELLENT OPENING

FOR

YOUNG PHYSICIAN.

Office of recently deceased physician to let, with practice,

1816 CHRISTIAN ST., PHILADELPHIA.

Unmarried Physician,

Age 24, graduate of Jefferson Medical College, '89, and now taking post-graduate course, desires position as assistant.

Address **H. W.,**
Care Medical and Surgical Reporter.

St. Vincent Home Maternity Hospital,

70th Street and Woodland Avenue,

RABUTEAU'S DRAGEES OF IRON

Laureate of the Institute of France.—Prize in Therapeutics.

The studies made by the Physicians of the Hospitals have demonstrated that the **Genuine Dragees of Iron of Rabuteau** are superior to all other preparations of Iron in cases of *Chlorosis, Anæmia, Leucorrhœa, Debility, Exhaustion, Convalescence, Weakness of Children*, and the maladies caused by the Impoverishment and Alteration of the blood after periods of fatigue, watching, and excesses of any kind.

TAKE 4 TO 6 DRAGEES DAILY.

Rabuteau's Elixir of Iron is recommended to those persons who may be unable to swallow the Dragees. Dose —*A small wineglassful with meals.*

Rabuteau's Syrup of Iron is specially designed for children. Chalybeate medication, by means of **Rabuteau's Iron**, is the most economical and the most rational known to therapeutics.

No constipation, no diarrhœa, complete assimilation.

Take only the GENUINE IRON OF RABUTEAU of

CLIN & CO., Paris.

SOLUTION OF THE SALICYLATE OF SODA OF DOCTOR CLIN.

Laureate of the Paris Faculty of Medicine (MONTYON PRIZE).

Dr. Clin's Solution, always identical in its composition, and of an agreeable taste, permits the easy administration of *pure Salicylate of Soda*, and the variation of the dose in accordance with the indications presented.

"The *Salicylate of Soda* used by **Clin** is of perfect purity, "and is prepared with the greatest care; it is a medicament "in which we may have every confidence."

—*Paris Society of Medicine, Meeting of Feb. 8th, 1879.*

Clin's Solution, very exactly mixed, contains: 2 grammes of *Salicylate of Soda* per tablespoonful, 50 centigrammes of *Salicylate of Soda* per teaspoonful.

Paris—CLIN & CO.—Paris

AND BY ALL DRUGGISTS.

CAPSULES MATHEY-CAYLUS

WITH THIN ENVELOPE OF GLUTEN.

CONTAINING COPAIBA AND ESSENCE OF SANTAL; COPAIBA, CUBEBS, AND THE ESSENCE OF SANTAL; COPAIBA, IRON, AND THE ESSENCE OF SANTAL.

"**The Mathey-Caylus Capsules,** of the *Essence of* "*Santal*, associated with the Balsams, possess an incontesta- "ble efficaciousness, and are employed with the greatest "success for the rapid cure of old or recent *Discharges*, "*Gonorrhœa, Blenorrhœa, Leucorrhœa, Cystitis of the Neck*, "*Urethritis, Catarrh*, and other *diseases of the bladder*, together "with all affections of the *Urinary Passages*."

"Thanks to their thin envelope of *Gluten*, which is essen- "tially assimilable, the *Mathey-Caylus Capsules* are digested "by the most delicate persons, and never weary the stomach."

—*Gazette des Hopitaux de Paris.*

CLIN & CO., Paris,

NEURALGIAS

PILLS OF DR. MOUSSETTE.

The **Moussette Pills** of aconitine and quinium, calm or cure *Gastralgia, Hemicrania, Headache, Sciatica*, and the most obstinate Neuralgias.

"The sedative action exerted by the **Moussette Pills** "upon the apparatus of the sanguineous circulation by the "intermediation of the vaso-motor nerves, indicates their "use in *neuralgias of the trigemini nerves*, (fifth pair), *con-* "*gestive neuralgias*, and *painful and inflammatory Rheumatismal* "*affections*."

"Aconitine produces marvelous effects in the treatment "of *facial neuralgias* when they are not symptomatic of "intracranial tumor."—*Society of Biology of Paris, Meeting* "*of the 28th February, 1880.*

DOSE—Take 3 to 6 pills during the twenty-four hours.

ACCEPT ONLY THE GENUINE MOUSSETTE PILLS OF

CLIN & CO.,—Paris.

GRAND NATIONAL PRIZE OF 16,600 FRANCS,

QUINA-LAROCHE

This meritorious **Elixir, QUINA-LAROCHE,** is prepared from the three Cinchonas; it is an agreeable and doubtless highly efficacious remedy.

—*The Lancet.*

VINOUS ELIXIR,

A STIMULATING RESTORATIVE

—AND—

ANTI-FEBRILE TONIC.

QUINA-LAROCHE under the form of a vinous **Elixir** contains the totality of the numerous principles of the three Cinchona barks. It is a preparation which renders great services to Therapeutics.—Extract of the *Gazette des Hôpitaux*, Paris.

FAR SUPERIOR TO ALL ORDINARY CINCHONA WINES.

LAROCHE'S QUINA, tried by the Academy of Medicine of Paris, is a specially prepared COMPOUND EXTRACT of Quinquina, a careful analysis, confirmed by experience, has shown that most of the wines and syrups hitherto used have not contained all the properties of this precious bark, of these some, although beneficial, are altogether lost, while many preparations contain but half the properties of the bark in varying proportions.

MR. LAROCHE, by his peculiar method, has succeeded in extracting all the active principles of the quinquina, combining these with *Catalan Wine* forming an Elixir free from the disagreeable bitterness of other similar preparations. Practitioners have found triple advantages in the use of this Elixir, it is a *strong tonic*, is easily administered, and perfectly harmless, being free from the unpleasant effects of Quinine.

THE FERRUGINOUS QUINA-LAROCHE is the invigorating tonic *par excellence*, having the advantage of being easily assimilated by the gastric juice; without, in any way, deranging the action of the digestive organs, proving itself to be a most efficacious remedy in cases of impoverishment of the blood, ANÆMIA, CHLOROSIS, INTESTINAL HÆMORRHAGE, CASTRALGIA, EXHAUSTION, ETC., ETC.

PARIS.—22 RUE DROUOT.—PARIS.

E. FOUGERA & CO., New York,

Sole Agents for the United States for the above Preparations.

LAPACTIC PILLS, S. & D.'s.

(PILULÆ LAPACTICÆ.)

Aloin	1-4 gr.
Strychnine	1-60 gr.
Ext. Belladonna	1-8 gr.
Ipecac	1-16 gr.

An elegant and most efficient combination **introduced by us** and found in practice to possess superior advantages over similar formulæ for the relief of

HABITUAL CONSTIPATION, ATONIC DYSPEPSIA, BILIARY ENGORGEMENT AND MANY GASTRIC DISORDERS.

☞ **Since we introduced our Lapactic Pills**—some four years ago—a number of manufacturers have adopted the same formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term **"Lapactic Pills, S. & D.'s"** when prescribing these pills.
Dose: One to two pills when going to bed.

PAN-PEPTIC TABLETS, S. & D.'s.

A TONIC DIGESTIVE.

Pure Pepsin	1 gr.
Pure Pancreatin	1 gr.
Pure Caffeine	¼ gr.

Acid Lacto-Phosphate of Calcium.
Celery.

The **Pepsin** and **Pancreatin** used in these tablets possess highest digestive power, and cannot fail to promptly start and accomplish

THE DIGESTION OF FOOD.

Whilst the **Caffeine,** by its stimulant tonic action on stomach and bowels, assists and quickens the normal digestion and assimilation of food, the **Acid Lacto-Phosphate of Calcium** contributes to the tonic action of the tablets, and aids to build up the general system, and a small quantity of that refreshing aromatic nerve stimulant, **Celery,** imparts a pleasant flavor and acts as an appetizer.

DR. MASSEY'S
PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

THE GENUINE IMPORTED NATURAL

CARLSBAD SPRUDEL SALT

AND

CARLSBAD MINERAL WATERS

Are Highly Recommended for

1. **Diseases of the Stomach**—Chronic catarrh of the stomach, cardialgia, ulcer of the stomach.

2. **Diseases of the Intestines**—Chronic constipation, chronic diarrhœa.

3. **Diseases of the Spleen**—Chronic hyperæmia of the spleen, tumors of the spleen, arising after intermittent fever, typhus, etc., and the effects of a residence in marshy districts or hot climates.

The genuine imported Carlsbad Sprudel Salt is put up in round bottles like the above cut. Each bottle comes in a paper cartoon with the seal of the City of Carlsbad, and signature of "EISNER & MENDELSON CO.," sole Agents, on the neck of every bottle and on the outside cartoon.

4. **Liver Diseases**—Hyperæmia of the liver, resulting from agglomeration of the blood in the veins, if it does not originate in organic defects; fat liver, jaundice, produced by catarrh of the passages of the bile, or by liver complaint in consequence of violent emotions; gallstones.

5. **Diseases of the Kidneys and Bladder**—Gravel, nephritic stones, sand, stone in the bladder—chronic catarrh of the kidneys and bladder—albuminuria.

6. **Diseases of the Prostate**—Chronic hyperæmia of the prostate, resulting from interrupted circulation in the bowels, constipation, hemorrhoids, etc.

7. **Chronic Catarrh of the Womb,** produced by menstrual disturbances, hemorrhoids, and the different consequences of interrupted circulation in the bowels.

8. **Gout,** especially in the early stages.

9. **Diabetes Mellitus**—By the use of the Carlsbad Thermal Waters, not only the clinical phenomena of this disease (the tormenting thirst, violent hunger, dryness of the skin) disappear in a very short time, but it also considerably diminishes the secretion of sugar in the urine, and frequently causes it to disappear altogether.

Diseases of the stomach are best treated with the Carlsbad Water, whereas the Carlsbad Sprudel Salt (powder form) is to be preferred in diseases of the viscera, such as intestinal canal, spleen, kidneys, inadiposis, etc.

PAMPHLETS MAILED ON APPLICATION.

EISNER & MENDELSON CO.,

SOLE AGENTS,

6 BARCLAY STREET, NEW YORK.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

P. McCAHEY, M. D.

Price, $3.00.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{30}$ gr.), Antimony Tart. $\frac{1}{15}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥i to f℥ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN,

CHEMIST,

WALNUT & THIRTEENTH STREETS,

PHILADELPHIA.

TERTIARY SYPHILIS.

"Your preparation, **IODIA**, is an excellent alterative, and is the most agreeable of any preparation of Iod. Potas., as it does not cause the cramps in stomach, which are often intolerable.

"I have employed **IODIA** in two cases of Tertiary Syphilis, in which, after five weeks' treatment, the manifestations disappeared.

"In a case of Syphiltic Eczema it was also successful. —Dr. Sam Petiteau, Garches, France, Nov. 10, 1890.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

ESTABLISHED 16 YEARS. BEWARE OF IMITATIONS.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, **"With Iron, No. 1;"** while the same preparation, **Without Iron,** is designated on the label as **"No. 2."**

In prescribing this preparation, physicians should be particular to mention *"COLDEN'S,"* viz., *"Ext. Carnis Fl. Comp. (Colden)."* A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. *Sold by druggists generally.*

C. N. CRITTENTON, General Agent, 115 Fulton St., New York.

GLENN'S SULPHUR SOAP.

BEWARE OF COUNTERFEITS.

Physicians know the great value of the local use of Sulphur in the **Treatment of Diseases of the Skin.**

Constantine's Pine-Tar Soap.

THE BEST SOAP MADE.

Has been on trial among physicians for very many years as a healing agent. **By far the Best Tar Soap made.**

Wholesale Depot, C. N. CRITTENTON, 115 Fulton St, New York.

Samples of above Soaps SENT FREE, on application, to any Physician enclosing card

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

FELLOWS'
HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(*A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.*)

PHOSPHO-MURIATE OF QUININE,

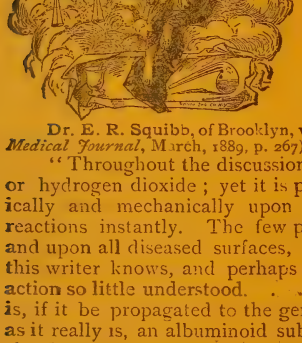
COMPOUND.

A RELIABLE ALTERATO-CONSTRUCTIVE,

Particularly indicated in conditions of **disturbed nutrition** and **tissue retrograde.**
An easily appropriated general tonic, promoting digestion, and safe under prolonged use.
A permanent combination of the soluble Wheat Phosphates, with Muriate of Quinine, Iron and Strychnia.
Of greater strength than the various Hypophosphite compounds.

DIGESTIBLE COCOA.
WHEAT PHOSPHATES.
MILK OF MAGNESIA.

THE CHAS. H. PHILLIPS CHEMICAL CO.,
77 PINE STREET, NEW YORK.



CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS.

17,670,000 BOTTLES FILLED IN 1890.

Apollinaris

"THE QUEEN OF TABLE WATERS."

"The APOLLINARIS SPRING yields enough water not only for PRESENT REQUIREMENTS but also for those of a FUTURE which is STILL REMOTE.

"The EXISTING SUPPLY is ADEQUATE for FILLING FORTY MILLION quart bottles YEARLY.

"The VOLUME of GAS is so GREAT that it is dangerous to approach the SPRING on a windless day."—THE TIMES, LONDON, 20th September, 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

BOUDAULT'S PEPSINE

The only Pepsine used in the Hospitals of Paris for the last Thirty Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 187 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy everyone that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of four, eight, and sixteen ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE

FORMULA OF DR. CORVISART.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of Powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in bottles of eight ounces.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium).

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Necker Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Professor Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and, if certain preliminaries are observed, success will be insured.

Sold only in bottles containing one dose.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of Alcoholic Stimulants and Raw Meat.

This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonar Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air-passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully prepared formulas for use.

RETAIL PRICE, COMPLETE, $2.50.

☞ A liberal discount allowed to the trade and profession. For descriptive pamphlet or other information address

E. FOUGERA & CO., 30 North William St., New York.

Sole Agents for the above Preparations.

LASSAR'S TREATMENT FOR BALDNESS.

"Shampoo the head thoroughly for ten minutes with Packer's tar soap. Wash out the lather with plenty of warm water followed by cold water. Dry the hair and apply:

℞ Lassar's Treatment and a half-cake of Packer's Tar Soap will be mailed to any Physician on receipt of four stamps. Address

THE PACKER MFG. CO., 100 FULTON ST., NEW YORK.

"The whole process is said to take about fifteen minutes, and to be very agreeable. Let me stimulate you to try this plan of treatment by telling you that I have seen it cause the scalp of one physician to take on a revigorated growth of hair."—GEORGE THOMAS JACKSON, M. D., *Chief of Dermatological Clinic, College of Phys. and Surg., New York, etc.* (*Gaillard's Med. Jour., May, 1890*).

CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal)**," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS.

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

Laboratory, 10 West Fourth Street, New York.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

LAW AND COLLECTION OFFICES,

608 & 610 Chestnut Street,

PHILADELPHIA.

GENTLEMEN:—Your management of the collections of the MEDICAL AND SURGICAL REPORTER during the past year has been so admirable and so much more successful than that of any agency with which I have dealt heretofore, that I renew my contract with you for the coming year with great pleasure.

The Publisher of the Medical and Surgical Reporter.

Philadelphia,
September 25, 1890.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnairr universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of
ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

Mellin's Food
FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.
— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

E. E. MONTGOMERY, M. D.,
1818 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,

GRIFFITH & CO.'S
Compound Mixture of Guaiac, Stillingia, etc.

For Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our **COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10.50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.)**

P. S.—The advertising of this article is confined strictly to Medical Journals, and the general verdict of physicians is that if this mixture does not act on a case, it is a difficult matter to find something that will.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

Carried in stock by the principal Wholesale Druggists in the U. S.

SVAPNIA
OR
PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y.

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

St. Vincent Home Maternity Hospital,

70th Street and Woodland Avenue,

(PASCHALL STATION) PHILADELPHIA.

Conducted by the Sisters of Charity.

INFANTS and Children under two years of age received.

Patients for MATERNITY DEPARTMENT accommodated according to their means.

IN THE WARDS terms range from $5.00 to $8.00 per week.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M.D.

Ale & Beef

"PEPTONIZED"

(EXTRACT:—BOVIS CUM MALTO.)

Is the identical combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND
OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a Perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE "PEPTONIZED" BEEF

is manufactured by Prof. Preston B. Rose, of Chicago, late of the faculty of the University of Michigan.

THE ALE USED
IS THE PUREST AND BEST MADE IN AMERICA

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers; also in Typhoid Fever and Dysentery.

Prof. G. A. Liebig says: "A careful chemical examination of the Peptonized Ale and Beef shows a much larger per cent. of nitrogenous blood and muscle-making matter over all other malt extracts, and that it is also rich in Diastase, giving it the power to digest Starch Foods."

PREPARED BY

The Ale and Beef Company,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.
Please mention this journal.

The Genuine Imported

Johann Hoff's Malt Extract

is put up in this style only.

FAC-SIMILE OF BOTTLE.
(One half of actual size.)

Please Specify

"JOHANN HOFF'S" MALT EXTRACT,
Imported by "EISNER,"
When ordering the Genuine Article.

This has been the first Malt Extract introduced to the *Medical Profession* (1847). No preparation of Malt has been so long and extensively employed as a Medical

Food Nutrient and Tonic.

The following is an abstract from the work on the Pulmonary Diseases published by Prof. PROSPER DE PIETRA SANTA, *at Paris:*

"As a large number of patients lack the necessary power to digest solid food, and would through the use of stimulants be merely excited and weakened, therefore I regard it of immense value to the practitioner to bring to his aid a nutritious tonic and remedy like the *Johann Hoff's* Malt Extract, which will act not only as a tonic, but as a nutrient as well, and which is less exciting than wine as a stimulant."

"I have, during the past eighteen months, made a number of examinations of the principal forms of Malt Extract in the market, and have satisfied myself that the *Johann Hoff's* Malt Extract, imported by Eisner & Mendelson Co., is a genuine Malt Extract, FREE FROM Salicylic Acid or other objectionable substances."

HENRY LEFFMANN, M.D., Phila.

CAUTION: A preparation bottled in New York is being sold as "Hoff's" Malt Extract. To obtain the genuine, original article, please specify "JOHANN HOFF'S MALT EXTRACT, imported by Eisner," which will prevent substitution.

The Genuine has the signature of "Johann Hoff" and "Moritz Eisner" on the neck of every bottle.

EISNER & MENDELSON CO., Sole Agents for the U. S.,
6 Barclay Street, New York.

Therapeutic Points.

Use McArthur's Syrup (Syrup Hypophos. Comp., C. P., McArthur) for Consumption, as it rapidly repairs the waste and restores vigor to the system.

For Tuberculosis in all forms, as it invigorates the tissue cells and enables them to overcome and expel the disease germs.

For Scrofula, as it builds up the tissue walls and thus breaks up the various inflammatory and suppurative processes incident to this diathesis.

For Inflammatory Diseases of the Throat, Bronchial Tubes and Lungs, as its tonic and healing properties are nowhere better manifested than in this class of diseases.

For Rachitis, and all osseous degeneration, as it rapidly repairs bone tissue.

For Teething of Infants, as it furnishes food to the growing teeth. For the same reason you should give it to the nursing mothers and those whose teeth and bones are suffering during pregnancy.

For Chronic Diarrhea, Leucorrhea, Suppurating Discharges and Sores.

For Chronic Alcoholism, the Morphine Habit, Brain Exhaustion, Loss of Memory, Neurasthenia, Spermatorrhea, Impotence, and all derangements of the nervous system. Here, by building up and restoring the nerve tissue it effects a permanent cure, raising the patient from despondency to renewed hope and confidence, from weakness to strength and vigor.

For Uterine Fibroids and all forms of perverted nutrition, where it restores the normal processes of nutrition, and effects a recovery at once gratifying to the patient and satisfactory to the physician.

To obtain the best results, the Syrup should be given for a long time—weeks, months and even years—until the disease is entirely eradicated and the patient no more susceptible to its return than if it "never had occurred."

As it is made only for Physicians' prescriptions there are no labels, &c., on the bottle.

We will send our valuable treatise on "The Curability and Treatment of Consumption," free to any physician.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

SOMNAL.

RADLAUER.

CHEMICAL FORMULA: $C_7H_{12}Cl_3O_3N$.

SOMNAL is a new soporific which produces sound sleep within half an hour after taking, and the effect lasting six to eight hours. The dose is **2 or 3 grammes** (half a teaspoonful); it is best administered with extract of licorice or with syrup of raspberry. **Somnal** does not affect either digestion, respiration, or the temperature of the body.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in 60 to 70 cases at the hospital. Doses of 2 grammes have produced a quiet, refreshing sleep, lasting from 6 to 8 hours, without any unpleasant symptoms following its use.

The British Medical Journal says: "*Somnal*," when given in doses of half a teaspoonful, will produce sleep in thirty minutes. The sleep is described as sound and natural, lasting from 6 to 8 hours, and followed by no unpleasant effects.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

Dr. J. S. Ridge, of Kingston, R. I., writes: "I have used Somnal on three cases of insomia, in middle aged and quite old ladies, with beautiful results, having used Sulphonal, Bromidia, Chloralamid with little or no result. I gave a lady 80 years old suffering from Insomnia 3 grammes of Somnal at bedtime in a little Syrup of Raspberry, with splendid effect, she getting, so the nurse says, 6 hours sound sleep. This is the best soporific I have used yet."

S. RADLAUER, - BERLIN.

NEW YORK ADDRESS:

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

GRAND NATIONAL PRIZE OF 16,600 FRANCS,

QUINA-LAROCHE

This meritorious **Elixir, QUINA-LAROCHE,** is prepared from the three Cinchonas; it is an agreeable and doubtless highly efficacious remedy.

—*The Lancet.*

VINOUS ELIXIR,

A STIMULATING RESTORATIVE

—AND—

ANTI-FEBRILE TONIC.

QUINA-LAROCHE under the form of a vinous **Elixir** contains the totality of the numerous principles of the **three** Cinchonæ barks. It is a preparation which renders great services to Therapeutics.—Extract of the *Gazette des Hôpitaux*, Paris.

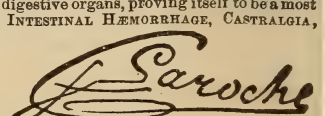
FAR SUPERIOR TO ALL ORDINARY CINCHONA WINES.

LAROCHE'S QUINA, tried by the Academy of Medicine of Paris, is a specially prepared COMPOUND EXTRACT of Quinquina, a careful analysis, confirmed by experience, has shown that most of the wines and syrups hitherto used have not contained all the properties of this precious bark, of these some, although beneficial, are altogether lost, while many preparations contain but half the properties of the bark in varying proportions.

MR. LAROCHE, by his peculiar method, has succeeded in extracting all the active principles of the quinquina, combining these with *Catalan Wine* forming an Elixir free from the disagreeable bitterness of other similar preparations. Practitioners have found triple advantages in the use of this Elixir, it is a *strong tonic*, is easily administered, and perfectly harmless, being free from the unpleasant effects of Quinine.

THE FERRUGINOUS QUINA-LAROCHE is the invigorating tonic *par excellence*, having the advantage of being easily assimilated by the gastric juice; without, in any way, deranging the action of the digestive organs, proving itself to be a most efficacious remedy in cases of impoverishment of the blood, ANÆMIA, CHLOROSIS, INTESTINAL HÆMORRHAGE, CASTRALGIA, EXHAUSTION, ETC., ETC.

PARIS.—22 RUE DROUOT.—PARIS.



E. FOUGERA & CO., New York,

Sole Agents for the United States for the above Preparations.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

(BOOKS FOR SUBSCRIBERS TO REPORTER.)

See adv. page viii.

HEATH'S DICTIONARY OF PRACTICAL SURGERY.

C. B. Porter, M. D., Boston, Mass., says; "A most excellent book for the library of the surgeon, and especially for the country practitioner; as a book of reference it is so concise and at the same time so complete."

N. Senn, M. D., College of Physicians and Surgeons, Milwaukee, says; "As a means of ready reference for the student and busy practitioner this book stands unexcelled."

Prof. E. H. Gregory, St. Louis Medical College, St. Louis, says: "I have examined the book, and find it a most valuable addition to my library. I am sure it will meet the favor of the surgical profession."

LEIDY'S HUMAN ANATOMY.

The Lancet-Clinic, Cincinnati, O., says: "Professor Leidy again presents to medical practitioners and students a treatise on human anatomy that at once commands the attention and admiration of all who are at all familiar with the subject. Most of the plates are original, and in common with the text are very beautiful to behold. The work is a complete illustration of the method of teaching anatomy adopted by a leading scientist, and one of America's best known professors of anatomy. This is one of the books that should be in the library of every practitioner of medicine and surgery."

The Medical Advance, Ann Arbor, Mich., says: "The student can master and retain a practical knowledge of anatomy in a shorter time and with less hard work from this text-book than from any other work extant, and it has been our privilege to teach anatomy for several years."

BYFORD'S DISEASES OF WOMEN.

The Boston Medical and Surgical Journal says: "It is a satisfaction to observe the discussion of certain topics which are often neglected by writers, notably of the sympathetic symptoms of organs apparently disconnected with the uterus, for which he will receive the thanks of the younger members of the profession. Another topic very widely treated is that of Constipation in its relation to uterine diseases. All the other topics which should have a place in a work of this kind have been fully and properly treated."

The Cincinnati Lancet-Clinic says: "The book is eminently practical and instructive. Its suggestions for treatment are well up with the times, mostly judicious, conservative, and valuable, and the whole amply repays for thorough perusal."

The St. Louis Courier of Medicine says: "The work of a representative Western practitioner and professor, and is a thoroughly practical work."

The Virginia Medical Monthly says: "We take pleasure in recommending it to every student and physician desirous of obtaining a standard work on Gynæcology."

The Chicago Medical Journal and Examiner says: "The chapter on puberty should be carefully studied by every physician, teacher, and mother in the land. . . . Its style is clear, but concise, and always practical, and shows the author to be, as we all know, an experienced teacher. The work as a whole is most valuable, both to the student and practitioner."

Gaillard's Medical Journal says: "It is replete with good judgment, broad and practical views. . . . The illustrations are excellent."

FOWLER'S DICTIONARY OF PRACTICAL MEDICINE.

The Medical News says: "For those who do not wish to purchase the much larger book of Quain, or who wish comparatively recent information concerning medical subjects in a somewhat narrow space, the book will certainly prove of value, and we heartily recommend it as one which will give a full return for the money invested in the purchase."

The London Lancet says: "What the writers know they tell simply and plainly, and generally manage to put it in a short compass, and, what is more, the treatment that is recommended is clearly and sufficientiy set forth. . . . We can heartily congratulate the editor and his colleagues on having admirably fulfilled their purpose, viz., to produce a first-rate dictionary of medicine, at once scientific and practical, which well deserve the success we have no doubt it will meet with."

JACOBSON'S OPERATIONS OF SURGERY.

The Medical and Surgical Reporter says: "This handsome book is one of the most admirable works on operative surgery which we have seen for a long time. The author has brought to its preparation a large observation and experience, and a very thorough acquaintance with the methods of other surgeons. His book is comprehensive and his directions are clear and reliable. It is gratifying to an American reader to find that full justice is done to the work of American surgeons by Mr. Jacobson, and that his book bears no marks of the distance which stretches between his land and ours. This is as it should be, and is no less an element in the excellence of the technical worth of his book than it is an evidence of the cosmopolitan character of good scientific work."

CAZEAUX & TARNIER'S MIDWIFERY. With Appendix by MUNDÉ.

The Memphis Medical Monthly says: "Cazeaux's Obstetrics was authority during our student life, and has been generally recognized as authority from the publication of the first edition to the present. We cannot do more than to fully endorse the following from the pen of T. Gallard Thomas, M. D.; 'I have examined the last edition of Cazeaux & Tarnier's Theory and Practice of Obstetrics, and pronounce it practical, and just what is needed by every practitioner. I highly recommend the work. This work should be prominent in every library.'"

Dr. Wm. L. Lusk says: "Cazeaux's Midwifery will always remain an inexhaustible mine of information, and I rejoice to see it once more accessible to the profession in a new and attractive dress."

Dr. Wm. Goodell says: "I deem Cazeaux & Tarnier's Obstetrics the best yet published."

The Denver Medical Times says; "It is needless to say anything in praise of this work. Cazeaux's Obstetrics is a classical work, and Tarnier is one of the best known French writers on Obstetrics. The whole has been brought up to date by the appendix of Prof. Mundé, and altogether it makes a very complete and practical treatise on the subject, unsurpassed if not unequalled by any work with which we are acquainted. Especially valuable are the signs of delivery in the dead body and of live and still-births. The chapter on antisepsis and on puerperal septicemia are also worthy of mention."

THOMAS'S MEDICAL DICTIONARY.

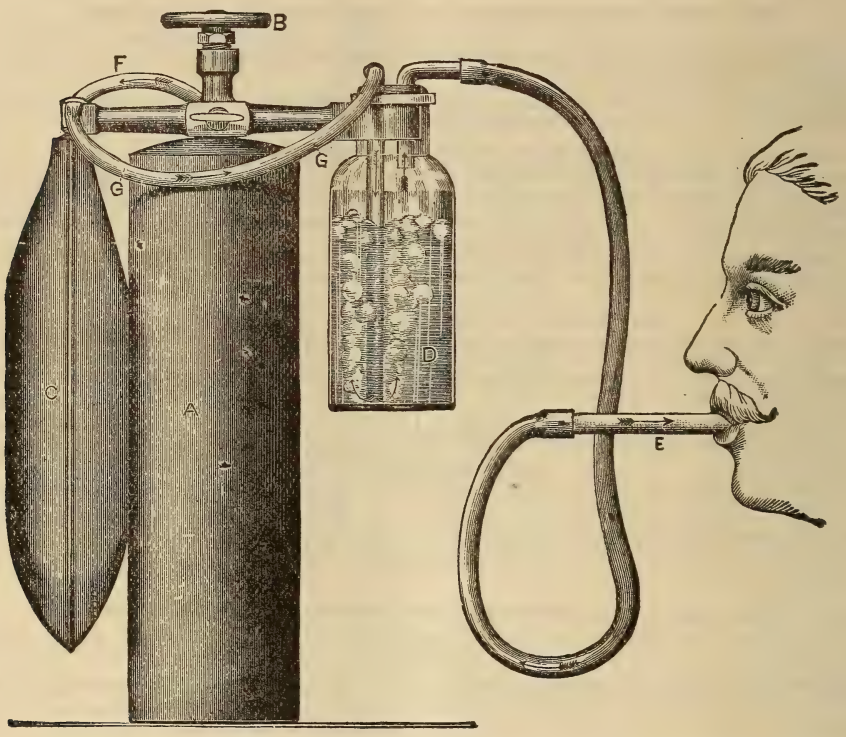
Prof. A. F. Patton, College of Physicians and Surgeons, Boston, Mass., says: "It is just the book for a medical or any other student, and it should be in the office of every physician. This dictionary supplies a place that has never been filled. I have looked it through and find all the new words that I have sought."

The St. Joseph Medical Herald says: "No better testimonial to the value of the work can be given than the following from Dr. J. Gibbon Hunt, the distinguished microscopist: 'To me the work is invaluable. I am astonished at its fullness of all recent words which the modern advance of medical science has introduced. Of course, I cannot conceive the learning and great labor which could edit such a complete, thorough, and admirable volume.' We can add nothing further save that the book should be in the hands of every physician and every student in the land."

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

FINE OFFICE TO RENT.

In Philadelphia—to a Specialist, a beautiful room, with light and heat, from 9 to 10 A. M., and in afternoon.

Address

POLLUX,

P. O. Box 843, Philadelphia.

DR. MASSEY'S
PRIVATE SANITARIUM
212 South Fifteenth Street
PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

The American Antipyretic, Analgesic and Anodyne.

Antikamnia

OPPOSED TO PAIN
A SUCCEDANEUM FOR MORPHIA.

1-OZ. PACKAGE, $1.00, PREPAID.

Valuable in Neuralgia, Sciatica, Acute Rheumatism and Typhoid Fever; also Headache and other Neuroses due to Irregularities of Menstruation. Exhibited in Asthma, Hay Fever, Influenza, La Grippe and Allied Complaints, it secures the desired result. ☞Further information and samples sent free on application. **ANTIKAMNIA CHEMICAL COMPANY, ST. LOUIS, MO.**

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request.

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

FRENCH, CAVE & CO.

(SUCCESSORS TO FRENCH, RICHARDS & CO.),

PHILADELPHIA,

WILL continue the manufacture of the Fine Pharmaceutical Products made by the late firm at the present laboratory, **16 and 18 North Tenth Street, Philadelphia.**

Physicians who have prescribed these preparations can rest assured that the high standard of quality which has made for these products a reputation for consistent strength and purity will be strictly maintained in the future, and the physician can always prescribe our preparations and depend on uniform results.

To those physicians who have not yet prescribed our products, we request them to send to us their address and we will forward by **EXPRESS, PREPAID,** a line of samples free for trial.

Physicians' Price-List and Formulary sent by mail on application.

Champagne ANALYZED

Of Interest to all Medical Practitioners.

WHAT IS SAID BY

THOMAS KING CHAMBERS, M.D., F.R.C.P.
R. OGDEN DOREMUS, M.D.
F. W. PAVY, M.D., F.R.S.

"Champagne, with a minimum of alcohol, is by far the wholesomest, and possesses remarkable exhilarating power."—THOMAS KING CHAMBERS, M.D., F.R.C.P.

"Having occasion to investigate the question of wholesome beverages, I have made a chemical analysis of the most prominent brands of Champagne. I find G. H. Mumm & Co.'s Extra Dry to contain, in a marked degree, less alcohol than the others. I therefore most cordially commend it not only for its purity but as the most wholesome of the Champagnes."—R. OGDEN DOREMUS, M.D., *Professor of Chemistry, Bellevue Hospital Medical College, New York.*

"Champagne, while only possessing the alcoholic strength of natural wines, is useful for exciting the flagging powers in case of exhaustion"—F. W. PAVY, M.D., F.R.S., *Lecturer on Physiology at Guy's Hospital, London.*

The remarkable vintage of 1884 of **C. H. MUMM & CO.'S EXTRA DRY CHAMPAGNE,** the finest for a number of years.
Pronounced by connoisseurs unsurpassed for excellence and bouquet.

FRED'K DE BARY & CO., New York,

SOLE AGENTS IN THE UNITED STATES AND CANADA.

GOUDRON DE BLOUNT

PREPARED FROM THE GENUINE CAROLINA TAR.

DOSE.—One fluid drachm four or more times a day (as indicated), either full strength, diluted, or, in combination.

INDICATIONS.—Chronic and acute affections of the Air Passages, Coughs, Colds, Bronchitis, Asthma and Consumption.

WILLIAM MURRELL, M.D., F.R.C.P.,

Lecturer on Pharmacology and Therapeutics at the Westminster Hospital; Examiner in Materic Medica to the Royal College of Physicians of London; Fellow of the Medico-Chirurgical College of Philadelphia,

Says:—"I have used with success 'Goudron de Blount.' The results have been good, and the preparation is popular with patients."

PREPARED EXCLUSIVELY FOR PHYSICIANS' PRESCRIPTIONS BY

R. E. BLOUNT, 33 RUE ST. ROCH, PARIS.

WHOLESALE AGENTS FOR UNITED STATES AND CANADA,

BATTLE & CO.,

CHEMISTS' CORPORATION,

Clinical Notes sent on Application. ST. LOUIS, MO.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

PASCHALVILLE,

PHILADELPHIA, - PA.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:

Pure Cod Liver Oil.....80 m. (drops)		Soda.....1-3 Grains	
Distilled Water.....35 "		Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.		Hyocholic Acid.....1-20 "	

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which **HYDROLEINE** is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

CHICAGO METRIC GRANULE CO.,

whose granules and other preparations have won a high reputation for their uniformity and excellence.

Maltine

WITH

COD LIVER OIL

A combination of the best Norwegian Cod Liver Oil with MALTINE, in which, by the vacuum process, rancidity is prevented and disagreeable odor and taste of the oil removed.

BASE A POWERFUL RECONSTRUCTIVE

CONTAINS NO INERT EMULSIFIER

Does not disturb Digestion nor offend the Palate

A complete list of the Maltine Preparations and their formulæ will be sent on application.

Please mention this Journal.) **THE MALTINE MANUFACTURING CO., New York, N. Y.**

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed—is the best check upon substitution.

FERRO-SALICYLATA

LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from Oil Wintergreen (Methyl Salicylate), - - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 minims.

Not Sold in Bulk.

ELIXIR

Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1–4 gr.
Sanguinarina Nitrate,	1–64 gr.
Morphine Acetate,	1–16 gr.
Ammonium Chloride,	1–2 gr.
Chloroform,	1–2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.—*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken-down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especially where the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggists throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS.—*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh, and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City, Richards Drug Co., San Francisco, Agents for Pacific Coast. Prices-current and printed matter cheerfully supplied.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

SIR MORELL MACKENZIE, in the *Journal of Laryngology*, published in London, says the following:

"Most of the German Saline Springs are situated on a range of the Taunus Hills. Of these, unquestionably one of *the very best* is

SODEN.

"Containing, as it does, some 23 springs, with a temperature varying between 12° to 18° C., the waters of which are charged with Chloride of Sodium in varying degrees up to 116 Grammes per litre, and some of which are further charged with Carbonic Acid, the Health Resort of Soden is unquestionably one of the very best places for the treatment of Pulmonary and Catarrhal complaints.

"COMPRESSED PASTILLES of the Soden Water are now an article of commerce, as well as the mineral waters. These are made from two of the well-waters, and containing a large amount of Chloride of Sodium, are particularly serviceable in pharyngeal catarrhs, and may even in some degree be used where it is desired to obtain the effect of the Soden treatment, in persons who are unable to make the necessary journey to the Spa itself. I have watched the effects of the Soden Waters for a considerable period, and regard them as extremely valuable in obstinate catarrhal affections of the throat. The small amount of iron which they contain renders them very useful in the stages of Throat Consumption, and they do good in nearly all cases of relaxation of the mucous membrane.

"The Pastilles offer a most convenient method of using the Waters; producing both a local and general effect. They are especially beneficial in catarrhal diseases of the air-passages; I have frequently found them of great service in the case of singers and public speakers.

(Signed) "MORELL MACKENZIE, M. D., LONDON."

DR. NORRIS WOLFENDEN, Senior Physician Throat Hospital, London, writes:

"SIR:—The Wells of Soden are known to possess most powerful medicinal virtues, and have been found of the utmost benefit in the treatment of Catarrhal conditions of the upper respiratory tract, such as Bronchitis and Emphysema, and even in Pulmonary Phthisis. Many chronic throat conditions are equally benefited. Possessing a large amount of Sodium Chloride in their composition, they have a character which is quite special, and the fact that the several Wells of Soden contain varying amounts of this important mineral constituent, renders it possible to treat many complaints of opposite nature on the same spot.

"I consider the 'Soden Mineral Pastilles,' which you have introduced to me, to be a most convenient and pleasant mode of obtaining the medicinal benefits of the Soden Wells. They form an agreeable and effective lozenge, and I feel certain will be of great service to patients afflicted with certain forms of chronic throat disease. Sprays of the same waters would, I am sure, be of much service. I hope your efforts to introduce the Soden Mineral Waters and Pastilles into this country will meet with success.

"I am, Sir, yours faithfully,

(Signed) "R. NORRIS WOLFENDEN, M.D. Cantab.,

"Senior Physician Throat Hospital, London; Editor of Journal of Laryngology."

LAPACTIC PILLS, S.&D.'s.

(PILULÆ LAPACTICÆ.)

Aloin	1-4 gr.
Strychnine	1-60 gr.
Ext. Belladonna	1-8 gr.
Ipecac	1-16 gr.

An elegant and most efficient combination **introduced by us** and found in practice to possess superior advantages over similar formulæ for the relief of

HABITUAL CONSTIPATION, ATONIC DYSPEPSIA, BILIARY ENGORGEMENT AND MANY GASTRIC DISORDERS.

☞ **Since we introduced our Lapactic Pills**—some four years ago—a number of manufacturers have adopted the same formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term **"Lapactic Pills, S. & D.'s"** when prescribing these pills. **Dose: One to two pills when going to bed.**

PAN-PEPTIC TABLETS, S.&D.'s.

A TONIC DIGESTIVE.

Pure Pepsin	1 gr.
Pure Pancreatin	1 gr.
Pure Caffeine	¼ gr.

Acid Lacto-Phosphate of Calcium.
Celery.

The **Pepsin** and **Pancreatin** used in these tablets possess highest digestive power, and cannot fail to promptly start and accomplish

THE DIGESTION OF FOOD.

Whilst the **Caffeine,** by its stimulant tonic action on stomach and bowels, assists and quickens the normal digestion and assimilation of food, the **Acid Lacto-Phosphate of Calcium** contributes to the tonic action of the tablets, and aids to build up the general system, and a small quantity of that refreshing aromatic nerve stimulant, **Celery,** imparts a pleasant flavor and acts as an appetizer.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.
—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

TERTIARY SYPHILIS.

"Your preparation, **IODIA**, is an excellent alterative, and is the most agreeable of any preparation of Iod. Potas., as it does not cause the cramps in stomach, which are often intolerable.

"I have employed **IODIA** in two cases of Tertiary Syphilis, in which, after five weeks' treatment, the manifestations disappeared.

"In a case of Syphiltic Eczema it was also successful. —Dr. Sam Petiteau, Garches, France, Nov. 10, 1890.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC. PROPHYLACTIC. DEODORANT.

LISTERINE

NON-TOXIC. NON-IRRITANT. NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

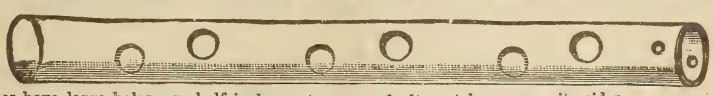
DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

ANTISEPTIC DRAINAGE TUBES.—Glass.



These Tubes have large holes, one-half inch apart, arranged alternately on opposite sides.
They are carefully finished, especial care being taken to make them smooth.
In addition to the drainage-holes, each tube has at one end two smaller holes for the insertion of Safety-Pin, through which it is prevented slipping into the wound.

FURNISHED IN SEVEN SIZES.

No. 1,	$1.25 per doz.	No. 4,	$1.55 per doz.
No. 2,	1.25 "	No. 5,	1.70 "

	No. 7, $2.10 per dozen.		

RAW CAT-GUT. I put this up in coils of 10 feet, four different sizes, Nos. 1, 2, 3, 4 (4 is thickest). Nos. 2 and 3 are the most useful sizes. **No. 1 Coil, 10 Cents; No. 2 Coil, 12 Cents; No. 3 Coil, 14 Cents; No. 4 Coil, 16 Cents.** Full directions with each coil for making it absolutely aseptic.

WILLIAM SNOWDEN,

Manufacturer, Importer and Exporter of Surgical Instruments,
No. 121 SOUTH ELEVENTH STREET, PHILADELPHIA.

FINE OFFICE TO RENT.

In Philadelphia—to a Specialist, a beautiful room, with light and heat, from 9 to 10 A. M., and in afternoon.

Address

POLLUX,

P. O. Box 843, Philadelphia.

DR. MASSEY'S

PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

WILLIAM R. WARNER & CO.'S

PIL. CHALYBEATE COMP.

IN THE TREATMENT OF

LA GRIPPE.

FORMULA:—Carb. Protoxide of Iron, gr. ijss.
Ext. Nux. Vom., ... gr. ⅛

ADVANTAGES:—Does not constipate, is easily absorbed, is nerve tonic and quickly soluble.

The effects left by La Grippe are marked Physical Prostration for which Pill Chalybeate Comp. (Warner & Co.'s) is almost a specific. The assimilable iron, acting as a blood tonic and the Nux Vomica as a stimulant to the spinal cord.

Dose, begin with one pill every four hours and increase to two pills three times a day.

The acute symptoms of La Grippe are controlled by (**EFF. ANTALGIC SALINE**), one dessert spoonful of which contains 4 grains Antipyrine and 4 grains Salicylate Soda. Physicians will not be disappointed in the treatment of La Grippe by trying this salt followed by PILL CHALYBEATE COMP. as above mentioned.

WILLIAM R. WARNER & CO.,

THE TIMES, LONDON, 20th Sept., 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "Ch. Marchand's Peroxide of Hydrogen (Medicinal)," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label aud signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our **COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co 's. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen ; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., **NEW YORK.**

Carried in stock by the principal Wholesale Druggists in the U. S.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

CHICAGO METRIC GRANULE CO.,

whose granules and other preparations have won a high reputation for their uniformity and excellence.

Price-lists and other information furnished on application.

JOHN OGDEN & CO.,

Thirteenth & Walnut Streets——Nineteenth & Arch Streets,

PHILADELPHIA.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M.D.

Ale & Beef

"PEPTONIZED"

(EXTRACT:—BOVIS CUM MALTO.)

Is the identical combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a Perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE "PEPTONIZED" BEEF

is manufactured by Prof. Preston B. Rose, of Chicago, late of the faculty of the University of Michigan.

THE ALE USED IS THE PUREST AND BEST MADE IN AMERICA

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers; also in Typhoid Fever and Dysentery.

Prof. G. A. Liebig says: "A careful chemical examination of the Peptonized Ale and Beef shows a much larger per cent. of nitrogenous blood and muscle-making matter over all other malt extracts, and that it is also rich in Diastase, giving it the power to digest Starch Foods."

PREPARED BY

The Ale and Beef Company,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges. Please mention this journal.

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc., one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point.

MANUFACTURED BY

JOHN WYETH & BROTHER,

PHILADELPHIA, PA.

Doctor:

Did you ever think of the philosophy of a course of treatment by the Hypophosphites of Lime and Soda?

It affords a most beautiful study in physiological repair. It is firmly based on Virchow's principles of cellular pathology.

When a plant is not thriving well the horticulturist treats it, not with medicine, but with its appropriate plant food. We should draw a lesson from this more often than we do.

Thousands of cases die every year, and thousands of others pass into hopeless invalidism, simply because the first perversions of nutrition are not corrected by supplying the system in abundance with the appropriate tissue food. As lime and soda are so abundantly found in animal tissues, and are necessary to unite with the organic elements in the formation of new cells, it must be evident that most of the departures from health are due to a lack of the proper proportion of these elements supplied to the tissues.

These errors of nutrition, if taken at the beginning, are quickly and easily corrected; but if they are allowed to go on until grave anatomical lesions are produced, or profound alterations of the nervous system are established, the cure must be slow and gradual, yet none the less sure if the treatment be continued.

A very important particular in prescribing the Hypophosphites of Lime and Soda is to secure their absolute chemical purity. This is secured and guaranteed in McArthur's Syrup. Its results are uniform and reliable. It is not filled up and complicated with the delusive irritant "tonics."

If at any time you want any other ingredient used it can be added to the prescription.

In McArthur's Syrup you get the chemically pure Hypophosphites of Lime and Soda. It is put up for use in physicians prescriptions, hence has no labels or directions on the bottle.

Our valuable treatise on "The Curability and Treatment of Consumption" will be sent free to any physician requesting it. Also one bottle of McArthur's Syrup, if you will agree to pay express charges.

McARTHUR HYPOPHOSPHITE CO.,

BOSTON, MASS.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

DR. MASSEY'S PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

THE GENUINE IMPORTED NATURAL

CARLSBAD SPRUDEL SALT

AND

CARLSBAD MINERAL WATERS

Are Highly Recommended for

1. **Diseases of the Stomach**—Chronic catarrh of the stomach, cardialgia, ulcer of the stomach.

2. **Diseases of the Intestines**—Chronic constipation, chronic diarrhœa.

3. **Diseases of the Spleen**—Chronic hyperæmia of the spleen, tumors of the spleen, arising after intermittent fever, typhus, etc., and the effects of a residence in marshy districts or hot climates.

The genuine imported Carlsbad Sprudel Salt is put up in round bottles like the above cut. Each bottle comes in a paper cartoon with the seal of the City of Carlsbad, and signature of "EISNER & MENDELSON CO.," sole Agents, on the neck of every bottle and on the outside cartoon.

4. **Liver Diseases**—Hyperæmia of the liver, resulting from agglomeration of the blood in the veins, if it does not originate in organic defects; fat liver, jaundice, produced by catarrh of the passages of the bile, or by liver complaint in consequence of violent emotions; gallstones.

5. **Diseases of the Kidneys and Bladder**—Gravel, nephritic stones, sand, stone in the bladder—chronic catarrh of the kidneys and bladder—albuminuria.

6. **Diseases of the Prostate**—Chronic hyperæmia of the prostate, resulting from interrupted circulation in the bowels, constipation, hemorrhoids, etc.

7. **Chronic Catarrh of the Womb**, produced by menstrual disturbances, hemorrhoids, and the different consequences of interrupted circulation in the bowels.

8. **Gout**, especially in the early stages.

9. **Diabetes Mellitus**—By the use of the Carlsbad Thermal Waters, not only the clinical phenomena of this disease (the tormenting thirst, violent hunger, dryness of the skin) disappear in a very short time, but it also considerably diminishes the secretion of sugar in the urine, and frequently causes it to disappear altogether.

Diseases of the stomach are best treated with the Carlsbad Water, whereas the Carlsbad Sprudel Salt (powder form) is to be preferred in diseases of the viscera, such as intestinal canal, spleen, kidneys, inadiposis, etc.

PAMPHLETS MAILED ON APPLICATION.

EISNER & MENDELSON CO.,

A BRIEF SUMMARY
OF
HYPODERMIC MEDICATION.

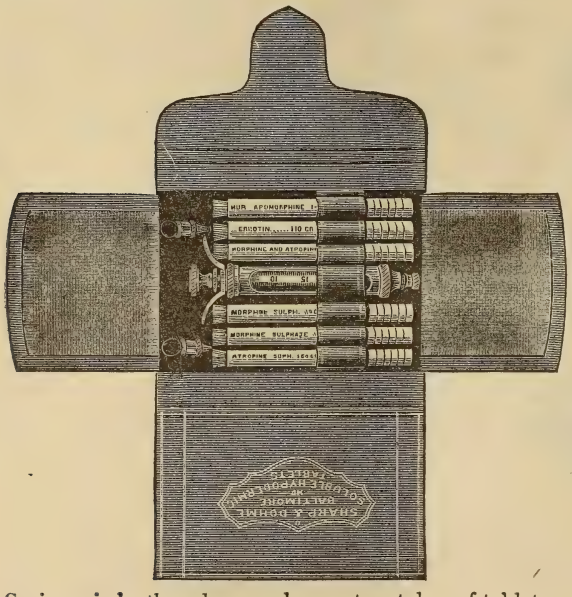
will be sent, with our compliments, when application is made and the name of this journal is mentioned. It quotes Profs. Dujardin-Beaumetz, Bartholow, Anstie, Erb, Echeverria, Mays and others. It contains important and the most recent suggestions on the technique of hypodermic medication, and gives the composition, properties, doses, etc., of our

SOLUBLE HYPODERMIC TABLETS, S. & D.'s.

which are quickly and perfectly soluble in cold or warm water, combining accuracy of dose with perfect preservation of the active ingredient, and the base of which is perfectly harmless and unobjectionable. They will cause no abscesses and will not become insoluble by age. They may also be administered by the mouth, and are

ALWAYS READY FOR INSTANT USE.

We respectfully solicit a trial of these tablets, and will mail samples of them free to readers of this journal.



That the several objections to hypodermic medication might be obviated, we have had manufactured expressly for us a line of

HYPODERMIC SYRINGES, S. & D.'s.,

which have all the latest improvements, are most accurately made of the best materials and so constructed as to allow the

MAKING OF A SOLUTION IN THE SYRINGE.

They are sent to any address at the following prices:

Syringe, in leathered-covered case, two tubes of tablets . . . . . net, $2.50
" " metal case, latest improved style, two tubes of tablets . . . . . " 2.50
" " " " four tubes of tablets . . . . . " 3.50
" " flexible leather case, as shown by cut 3.50

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address, DRS. S. S. & S. E. STRONG.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

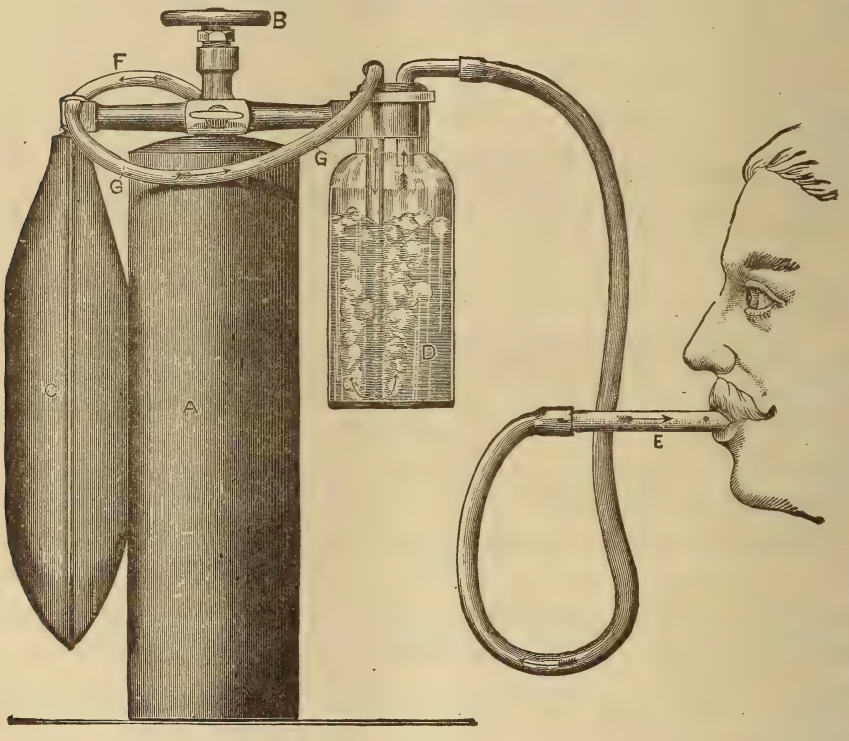
INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

GOUDRON DE BLOUNT

PREPARED FROM THE GENUINE CAROLINA TAR.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

Constipation.

Pavara Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle, (25 pills), 25 cents; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Suppositories

FOR THE TREATMENT OF

Hæmorrhoids or Piles.

Topliff's Suppositories supply what physicians and the public have long desired, namely, a *simple, effective,* and *perfectly harmless* remedy for hæmorrhoids or piles.

Physicians thoroughly approve of these Suppositories because they are so effective, and will not interfere in the slightest degree with any other medical treatment.

Price 50 cents per box. (24 Suppositories). Liberal discount to physicians. Two boxes will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

FRAUD.

Unscrupulous parties are selling an inferior Wine, calling it Royal Tokay, thus profiting by the numberless Medical Editorials written about our genuine product. The Wine cannot be used as a substitute for ours, and many physicians have unjustly blamed us for damage done, imagining they were securing our Wine, which they had already tested with complete satisfaction. Your patients will not secure the Wine you prescribe unless you specify CALVICO TOKAY, by which name it will hereafter be known.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

LONDON. PARIS. CALCUTTA. MONTREAL.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

1818 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

ESTABLISHED 16 YEARS. BEWARE OF IMITATIONS.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, "**With Iron, No. 1;**" while the same preparation, **Without Iron,** is designated on the label as "**No. 2.**"

In prescribing this preparation, physicians should be particular to mention "*COLDEN'S,*" viz., "*Ext. Carnis Fl. Comp.* (*Colden*)." A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. *Sold by druggists generally.*

C. N. CRITTENTON, General Agent, 115 Fulton St., New York.

GLENN'S SULPHUR SOAP.

BEWARE OF COUNTERFEITS.

Physicians know the great value of the local use of Sulphur in the **Treatment of Diseases of the Skin.**

Constantine's Pine-Tar Soap.

THE BEST SOAP MADE.

Has been on trial among physicians for very many years as a healing agent. **By far the Best Tar Soap made.**

Wholesale Depot, C. N. CRITTENTON, 115 Fulton St., New York.

Samples of above Soaps SENT FREE, on application, to any Physician enclosing card

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(*A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.*)

PHILLIPS' DIGESTIBLE COCOA.

A Peptonized Cocoa in which the fat of the bean is wholly retained and pre-digested by means of Pancreatine. It is a **delicious food beverage** rendered **assimilable,** and is **nourishing to a high degree.**

Besides its adaptability as a **substitute for tea and coffee** in daily use, and as a **convenient and reliable article of diet** in the sick room, it is **particularly recommended in many conditions of debility** where a supply of carbonaceous food is indicated, but where there is difficulty attending the digestion of ordinary fatty foods.

PHOSPHO-MURIATE OF QUININE, COMP.
WHEAT PHOSPHATES.
MILK OF MAGNESIA.

THE CHAS. H. PHILLIPS CHEMICAL CO.,
77 PINE STREET, NEW YORK.

CH. MARCHAND'S
PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

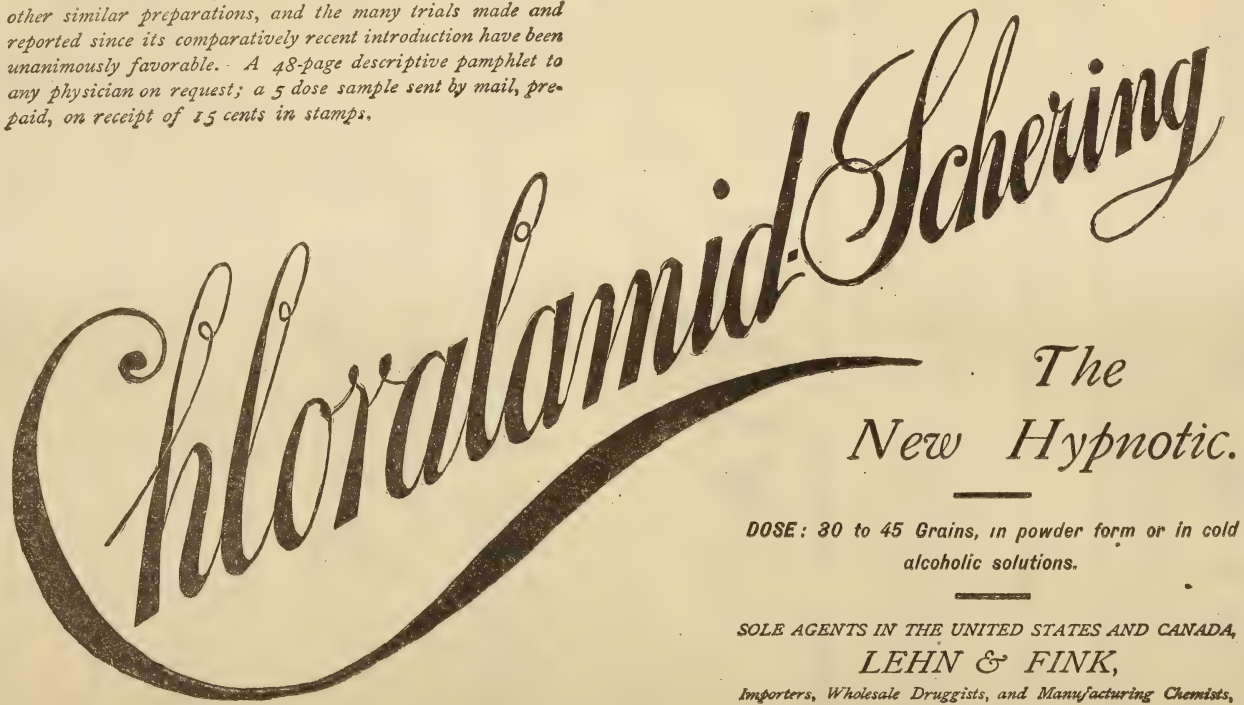
Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

CHLORALAMID possesses undoubted advantages over other similar preparations, and the many trials made and reported since its comparatively recent introduction have been unanimously favorable. A 48-page descriptive pamphlet to any physician on request; a 5 dose sample sent by mail, prepaid, on receipt of 15 cents in stamps.



The New Hypnotic.

DOSE: 30 to 45 Grains, in powder form or in cold alcoholic solutions.

SOLE AGENTS IN THE UNITED STATES AND CANADA,

LEHN & FINK,

Importers, Wholesale Druggists, and Manufacturing Chemists,

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

MEDICAL AND SURGICAL REPORTER,

P. O. Box 843, Philadelphia.

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

THE BEST ANTISEPTIC

FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

PHILADELPHIA.

Physical Exhaustion

HORSFORD'S ACID PHOSPHATE.

It is a well-known physiological fact that the phosphates are involved in all waste and repair, and are consumed with every effort. The quantity secreted by the kidneys is increased by labor of the muscles.

In the healthy organization the phosphate of lime exists in the muscles and bones. This phosphate is supplied by this preparation in such form as to be readily assimilated.

Dr. J. P. COWLES, Camden, Me., says: "I have used it in cases of physical debility arising from exhaustive habits or labors, with beneficial results."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

LASSAR'S TREATMENT FOR BALDNESS.

"Shampoo the head thoroughly for ten minutes with Packer's tar soap. Wash out the lather with plenty of warm water followed by cold water. Dry the hair and apply:

℞ Lassar's Treatment and a half-cake of Packer's Tar Soap will be mailed to any Physician on receipt of four stamps. Address

THE PACKER MFG. CO., 100 FULTON ST., NEW YORK.

"The whole process is said to take about fifteen minutes, and to be very agreeable. Let me stimulate you to try this plan of treatment by telling you that I have seen it cause the scalp of one physician to take on a revigorated growth of hair."—GEORGE THOMAS JACKSON, M. D., *Chief of Dermatological Clinic, College of Phys. and Surg., New York, etc.* (*Gaillard's Med. Jour., May, 1890*).

HOME FOR HABITUÉS.
OPIUM, CHLORAL, COCAINE.
DR. J. B. MATTISON,

Continues to receive at his residence, 314 State Street, Brooklyn, N. Y., a limited number of these habitués, to whom he devotes his *exclusive* professional attention. Patients Six. and Select. Attractive apartments, liberal cuisine, desirable privacy, cheerful society, and *personal* professional attention, based on several years' experience in the treatment of this disease. Details on application.

FOR SALE.

A Physician's Property, a fine large house, with all modern improvements, in the best central location in the city of New York, with a fine practice, worth from eight to ten thousand dollars per year. The physician practiced over twenty-five years in the same house. Thorough introduction will be given to purchaser. Address

Dr. A.,

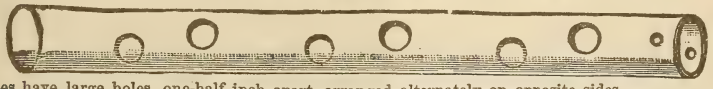
ANTISEPTIC DRAINAGE TUBES.—Glass.



These Tubes have large holes, one-half inch apart, arranged alternately on opposite sides.
They are carefully finished, especial care being taken to make them smooth.
In addition to the drainage-holes, each tube has at one end two smaller holes for the insertion of Safety-Pin, through which it is prevented slipping into the wound.

FURNISHED IN SEVEN SIZES.

No. 1,	**$1.25 per doz.**	**No. 4,**	**$1.55 per doz.**
No. 2,	**1.25 "**	**No. 5,**	**1.70 "**
No. 3,	**1.40 "**	**No. 6,**	**1.90 "**
	No. 7, $2.10 per dozen.		

RAW CAT-GUT. I put this up in coils of 10 feet, four different sizes, Nos. 1, 2, 3, 4 (4 is thickest). Nos. 2 and 3 are the most useful sizes. **No. 1 Coil, 10 Cents; No. 2 Coil, 12 Cents; No. 3 Coil, 14 Cents; No. 4 Coil, 16 Cents.** Full directions with each coil for making it absolutely aseptic.

WILLIAM SNOWDEN,
Manufacturer, Importer and Exporter of Surgical Instruments,
No. 121 SOUTH ELEVENTH STREET, PHILADELPHIA.

CH. MARCHAND'S
PEROXIDE OF HYDROGEN
(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "Ch. Marchand's Peroxide of Hydrogen (Medicinal)," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS.

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

Laboratory, 10 West Fourth Street, New York.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

PHILADELPHIA.

GENTLEMEN:—Your management of the collections of the MEDICAL AND SURGICAL REPORTER during the past year has been so admirable and so much more successful than that of any agency with which I have dealt heretofore, that I renew my contract with you for the coming year with great pleasure.

The Publisher of the Medical and Surgical Reporter.

Philadelphia,
September 25, 1890.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to curé anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine,* Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BLAUD

GOLD MEDAL, PARIS, 1878.

W. BAKER & Co.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WANTED.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

Mellin's Food
FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

BOSTON, MASS.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our **COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., **NEW YORK.**

Carried in stock by the principal Wholesale Druggists in the U. S.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y

To whom all orders for samples must be addressed.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M.D.

Ale & Beef

"PEPTONIZED"

(EXTRACT:—BOVIS CUM MALTO.)

Is the identical combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a Perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE "PEPTONIZED" BEEF

is manufactured by Prof. Preston B. Rose, of Chicago, late of the faculty of the University of Michigan.

THE ALE USED IS THE PUREST AND BEST MADE IN AMERICA

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers; also in Typhoid Fever and Dysentery.

Prof. G. A. Liebig says: "A careful chemical examination of the Peptonized Ale and Beef shows a much larger per cent. of nitrogenous blood and muscle-making matter over all other malt extracts, and that it is also rich in Diastase, giving it the power to digest Starch Foods."

PREPARED BY

The Ale and Beef Company,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges. Please mention this journal.

HENRY LEFFMAN, M. D.,

Analytical Chemist and Expert,

715 Walnut Street,

PHILADELPHIA, October 26, 1889.

MESSRS. EISNER & MENDELSON:

SIRS:—In response to inquiries made concerning the relative merits of the Johann Hoff's Malt Extract, and that sold under the name of Tarrant's Hoff's Extract, I may state as follows:

"That I have, during the past eighteen months, made a number of examinations of the principal forms of Malt Extract in the market, and have, among other matters, satisfied myself that the Johann Hoff's Malt Extract, as imported by you, is a Genuine Extract of Malt."

The judgment of the value of a liquid preparation of Malt will be largely based on the percentage of Alcohol, and the presence of any preservative, especially Salicylic Acid. It may be justly said that the less Alcohol found the better, provided its place is not taken by some more objectionable substance. Under such considerations, the Johann Hoff's Malt Extract possesses decided advantages over the preparation sold under the name of Tarrant's Hoff's Extract, in the fact that the former contains three and one-half per cent. of Alcohol, while the latter has yielded, in two samples, four and three-quarters and five per cent. respectively.

Further, I have noted in a number of examinations of the latter article—Tarrant's Extract—the presence of Salicylic Acid, while I have never, in repeated examinations of the Eisner & Mendelson Johann Hoff's Extract, found any trace of such preservative. The effects of Salicylic Acid have been extensively studied, and the unanimous opinion of sanitary chemists is, that it is very objectionable as an addition to any form of food or drink, and especially objectionable in Malt Extract. From some observations made in my own laboratory, and published in the *Polyclinic* in May, 1888, it appears that not only does Salicylic Acid wholly suspend the action of Diastase, to which Malt owes its starch-converting power, but that the starch-digesting power of the pancreatic secretion is also wholly suspended by it. It thus appears the addition of this body is to render the Extract not only inactive so far as its own function is concerned, but it introduces into the system an injurious substance, and one which interferes with an important function. Sanitary authorities, in various parts of Europe, have given from time to time much attention to the now indiscriminate use of this acid, and have all, so far as I am aware, condemned its employment in any article of food or drink. For this reason, among others as above noted, I am of the opinion that the Genuine Johann Hoff's Malt Extract, as imported by Eisner & Mendelson, is to be preferred. I may say that all the examinations were made on samples obtained in the open market, and in the bottles as originally imported. Yours,

HENRY LEFFMAN, M. D.,

Professor Chemistry Woman's Medical College, and Penna. College Dental Surgery; Food Inspector, Pennsylvania Board of Agriculture.

Doctor:

Did you ever think of the philosophy of a course of treatment by the Hypophosphites of Lime and Soda?

It affords a most beautiful study in physiological repair. It is firmly based on Virchow's principles of cellular pathology.

When a plant is not thriving well the horticulturist treats it, not with medicine, but with its appropriate plant food. We should draw a lesson from this more often than we do.

Thousands of cases die every year, and thousands of others pass into hopeless invalidism, simply because the first perversions of nutrition are not corrected by supplying the system in abundance with the appropriate tissue food. As lime and soda are so abundantly found in animal tissues, and are necessary to unite with the organic elements in the formation of new cells, it must be evident that most of the departures from health are due to a lack of the proper proportion of these elements supplied to the tissues.

These errors of nutrition, if taken at the beginning, are quickly and easily corrected; but if they are allowed to go on until grave anatomical lesions are produced, or profound alterations of the nervous system are established, the cure must be slow and gradual, yet none the less sure if the treatment be continued.

A very important particular in prescribing the Hypophosphites of Lime and Soda is to secure their absolute chemical purity. This is secured and guaranteed in McArthur's Syrup. Its results are uniform and reliable. It is not filled up and complicated with the delusive irritant "tonics."

If at any time you want any other ingredient used it can be added to the prescription.

In McArthur's Syrup you get the chemically pure Hypophosphites of Lime and Soda. It is put up for use in physicians prescriptions, hence has no labels or directions on the bottle.

Our valuable treatise on "The Curability and Treatment of Consumption" will be sent free to any physician requesting it. Also one bottle of McArthur's Syrup, if you will agree to pay express charges.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* **a slowly but progressively active hypnotic.** *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* **time** *when the remedy should be administered; second, the* **method** *of administration; third, the* **dose.**"

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of **hot** *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be **certain** *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* **only** *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

CHLORALAMID possesses undoubted advantages over other similar preparations, and the many trials made and reported since its comparatively recent introduction have been unanimously favorable. A 48-page descriptive pamphlet to any physician on request; a 5 dose sample sent by mail, prepaid, on receipt of 15 cents in stamps.

Chloralamid-Schering

The New Hypnotic.

DOSE: 30 to 45 Grains, in powder form or in cold alcoholic solutions.

SOLE AGENTS IN THE UNITED STATES AND CANADA,

LEHN & FINK,

Importers, Wholesale Druggists, and Manufacturing Chemists,

NEW YORK.

THE GENUINE IMPORTED NATURAL

CARLSBAD SPRUDEL SALT

AND

CARLSBAD MINERAL WATERS

Are Highly Recommended for

1. **Diseases of the Stomach**—Chronic catarrh of the stomach, cardialgia, ulcer of the stomach.

2. **Diseases of the Intestines**—Chronic constipation, chronic diarrhœa.

3. **Diseases of the Spleen**—Chronic hyperæmia of the spleen, tumors of the spleen, arising after intermittent fever, typhus, etc., and the effects of a residence in marshy districts or hot climates.

The genuine imported Carlsbad Sprudel Salt is put up in round bottles like the above cut. Each bottle comes in a paper cartoon with the seal of the City of Carlsbad, and signature of "EISNER & MENDELSON CO.," sole Agents, on the neck of every bottle and on the outside cartoon.

4. **Liver Diseases**—Hyperæmia of the liver, resulting from agglomeration of the blood in the veins, if it does not originate in organic defects; fat liver, jaundice, produced by catarrh of the passages of the bile, or by liver complaint in consequence of violent emotions; gallstones.

5. **Diseases of the Kidneys and Bladder**—Gravel, nephritic stones, sand, stone in the bladder—chronic catarrh of the kidneys and bladder—albuminuria.

6. **Diseases of the Prostate**—Chronic hyperæmia of the prostate, resulting from interrupted circulation in the bowels, constipation, hemorrhoids, etc.

7. **Chronic Catarrh of the Womb,** produced by menstrual disturbances, hemorrhoids, and the different consequences of interrupted circulation in the bowels.

8. **Gout,** especially in the early stages.

9. **Diabetes Mellitus**—By the use of the Carlsbad Thermal Waters, not only the clinical phenomena of this disease (the tormenting thirst, violent hunger, dryness of the skin) disappear in a very short time, but it also considerably diminishes the secretion of sugar in the urine, and frequently causes it to disappear altogether.

Diseases of the stomach are best treated with the Carlsbad Water, whereas the Carlsbad Sprudel Salt (powder form) is to be preferred in diseases of the viscera, such as intestinal canal, spleen, kidneys, inadiposis, etc.

PAMPHLETS MAILED ON APPLICATION.

LAPACTIC PILLS, S. & D.'s.

(PILULÆ LAPACTICÆ.)

Aloin	1-4 gr.
Strychnine	1-60 gr.
Ext. Belladonna	1-8 gr.
Ipecac	1-16 gr.

An elegant and most efficient combination **introduced by us** and found in practice to possess superior advantages over similar formulæ for the relief of

HABITUAL CONSTIPATION, ATONIC DYSPEPSIA, BILIARY ENGORGEMENT AND MANY GASTRIC DISORDERS.

☞ **Since we introduced our Lapactic Pills**—some four years ago—a number of manufacturers have adopted the same formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term **"Lapactic Pills, S. & D.'s"** when prescribing these pills. **Dose: One to two pills when going to bed.**

PAN-PEPTIC TABLETS, S. & D.'s.

A TONIC DIGESTIVE.

Pure Pepsin	1 gr.
Pure Pancreatin	1 gr.
Pure Caffeine	¼ gr.
Acid Lacto-Phosphate of Calcium.	
Celery.	

The **Pepsin** and **Pancreatin** used in these tablets possess highest digestive power, and cannot fail to promptly start and accomplish

THE DIGESTION OF FOOD.

Whilst the **Caffeine,** by its stimulant tonic action on stomach and bowels, assists and quickens the normal digestion and assimilation of food, the **Acid Lacto-Phosphate of Calcium** contributes to the tonic action of the tablets, and aids to build up the general system, and a small quantity of that refreshing aromatic nerve stimulant, **Celery,** imparts a pleasant flavor and acts as an appetizer.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.

FOR SALE.

A Physician's Property, a fine large house, with all modern improvements, in the best central location in the city of New York, with a fine practice, worth from eight to ten thousand dollars per year. The physician practiced over twenty-five years in the same house. Thorough introduction will be given to purchaser. Address

Dr. A.,

MEDICAL AND SURGICAL REPORTER, PHILADELPHIA, PA.

P. O. Box 843.

FOR SALE.

A profitable medical and surgical practice, together with a beautiful home, in a live railroad town of 2,500 inhabitants in Southern Tennessee. Practice pays $2,000 per year, cash. Property consists of a neat cottage of nine rooms, good and numerous out-buildings, and grounds of 1½ acres, containing a fine orchard, all small fruits, ornamental trees and shrubbery. A special opportunity for a young man to secure an already established practice. Will sell practice and property for $2.000. For terms of payment and further particulars, address,

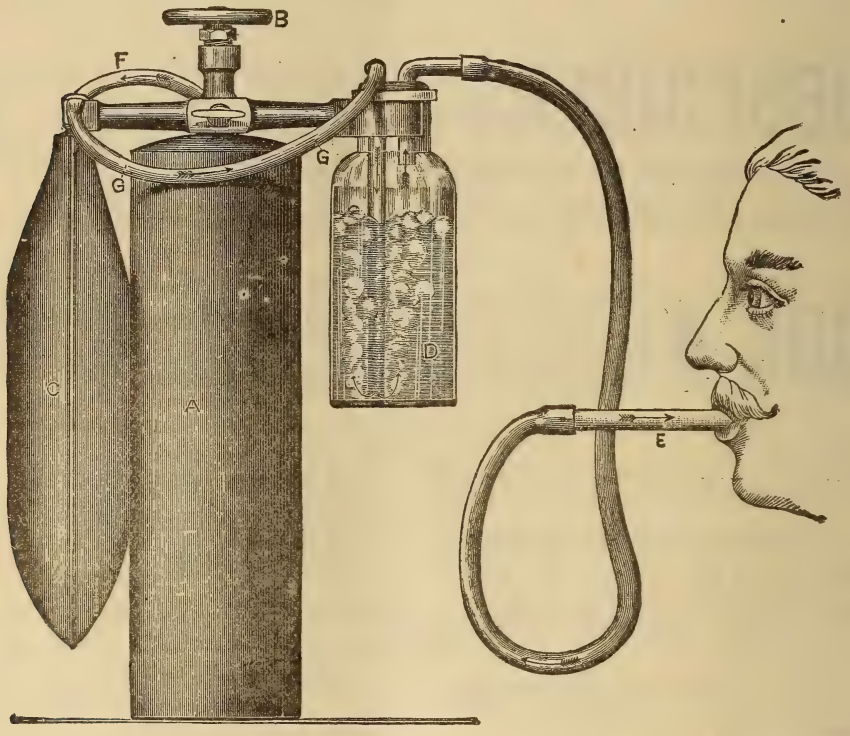
INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	**$13.00**
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	**$25.00**

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

"Familiar in millions of mouths as any household word."

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Constipation.

Pavara Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle, (25 pills), 25 cents; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Suppositories

FOR THE TREATMENT OF

Hæmorrhoids or Piles.

Topliff's Suppositories supply what physicians and the public have long desired, namely, a *simple, effective,* and *perfectly harmless* remedy for hæmorrhoids or piles.

Physicians thoroughly approve of these Suppositories because they are so effective, and will not interfere in the slightest degree with any other medical treatment.

Price 50 cents per box, (24 Suppositories). Liberal discount to physicians. Two boxes will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

FRAUD.

Unscrupulous parties are selling an inferior Wine, calling it Royal Tokay, thus profiting by the numberless Medical Editorials written about our genuine product. The Wine cannot be used as a substitute for ours, and many physicians have unjustly blamed us for damage done, imagining they were securing our Wine, which they had already tested with complete satisfaction. Your patients will not secure the Wine you prescribe unless you specify CALVICO TOKAY, by which name it will hereafter be known.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

RIO CHEMICAL CO., St. Louis, Mo., U. S. A.

LONDON. PARIS. CALCUTTA. MONTREAL.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

1818 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	1-3 Grains
Distilled Water	35 "	Salicylic Acid	1-4 "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1-90 "

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which **HYDROLEINE** is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable,-supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

Maltine

WITH

COD LIVER OIL

A combination of the best Norwegian Cod Liver Oil with MALTINE, in which, by the vacuum process, rancidity is prevented and disagreeable odor and taste of the oil removed.

Base a Powerful Reconstructive

Contains No Inert Emulsifier

Does not disturb Digestion nor offend the Palate

Is an active Starch Digester and Tissue Builder.

Produces rapid Improvement in Appetite.

Is used where "Emulsions" cannot be tolerated.

A complete list of the Maltine Preparations and their formulæ will be sent on application.

THE MALTINE MANUFACTURING CO.

New York, N. Y.

(Please mention this Journal.)

It is Important

For the Physician to watch the character and quality of the remedies used in his prescriptions. Responsibility *does not cease* when the patient leaves the office; for impure, stale, or inferior preparations may be used without his knowledge. Personal examination of remedies prescribed—is the best check upon substitution.

FERRO-SALICYLATA

LIQUID.

MERRELL.

An eligible combination of Methyl Salicylate and Tinct. Citro-Chloride Iron, in a pleasant and permanent form.

EACH FLUID DRACHM CONTAINS

True Salicylic Acid—from Oil Wintergreen (Methyl Salicylate), - - - - 5 grs.
Tinct. Citro-Chloride Iron, 5 minims.

Not Sold in Bulk.

ELIXIR

Pinus Compositus.

MERRELL.

Each Fluid Drachm Contains

White Pine—fresh bark,	2½ grs.
Balm Gilead Buds,	2 grs.
Spikenard,	2 grs.
Cherry Bark,	1¾ grs.
Ipecac,	1–4 gr.
Sanguinarina Nitrate,	1–64 gr.
Morphine Acetate,	1–16 gr.
Ammonium Chloride,	1–2 gr.
Chloroform,	1–2 minim.

Not Sold in Bulk.

FERRO-SALICYLATA.—*Merrell.*

Ferro-Salicylata is especially valuable in that shade of disease peculiar in anæmic, delicate, poorly nourished or broken-down patients—usually aged people—children or youth—but met with in all ages. In adults, and often in children when the disease is not plainly chronic, there will be a long series of recurrences with intervals of doubtful health. It may also be employed in acute articular rheumatism, and in some cases of acute tonsillitis, especiallywhere the diagnosis is at first in doubt between rheumatic angina and diphtheria; also, in acute rheumatism and rheumatic affections generally.

Ferro-Salicylata may be used in combination with the Iodides and Bromides of Potassium and Sodium. Associated with the former, it will prove an admirable alterative and tonic in second syphilis attended by a debilitated condition of the general system. It also combines well with Chlorate Potassium, the Hypophosphites, with Fowler's Solution, the vegetable bitter tonics, either in Fluid Extract or Tincture Form.

Ferro-Salicylata and all other preparations of this Company reach the laity through professional channels only. We therefore avoid entering into the minute details of their application, leaving the physician to make such practical use of our therapeutic notes as in his judgment may be best suited to individual cases.

Ferro-Salicylata may be obtained of wholesale druggists throughout the United States, of our Eastern Office, 96 Maiden Lane, New York City, or direct from the Laboratory.

Please designate "Ferro-Salicylata—*Merrell.*"

ELIXIR PINUS COMPOSITUS.—*Merrell.*

An admirable combination of well known and highly approved medicinal agents; recommended in acute, chronic, and capillary bronchitis—in ordinary coughs and colds, and wherever a "routine" expectorant is suggested. In the troublesome cough following the recent epidemic "La Grippe," it proved invaluable—many of our correspondents looking upon it as a "specific" in this stage of the disease.

CAUTION.—Physicians are reminded that the Elixir Pinus Compositus of this manufacturer is wholly unlike the many syrups, etc., under similar names, and the difference will be readily appreciated when tried. In testing the physical properties of the Elixir Pinus, note especially its delicate taste and perfect freedom from the odor of rank syrup, the drastic, harsh, and repulsive characteristics of the crude blood-root, and other coarser ingredients characteristic of competing preparations.

"Merrell Co.'s" "Green Drug," Fluid Extracts, True Salicylic Acid, Salts of Hydrastis, Fluid Hydrastis, and Specialties may be obtained of wholesale druggists throughout the United States, at the Home Office at Cincinnati, or the New York Office, 96 Maiden Lane, New York City, Richards Drug Co., San Francisco, Agents for Pacific Coast. Prices-current and printed matter cheerfully supplied.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

CHLORALAMID possesses undoubted advantages over other similar preparations, and the many trials made and reported since its comparatively recent introduction have been unanimously favorable. A 48-page descriptive pamphlet to any physician on request; a 5 dose sample sent by mail, prepaid, on receipt of 15 cents in stamps.

The Genuine Imported

Johann Hoff's Malt Extract

is put up in this style only.

FAC-SIMILE OF BOTTLE.
(One half of actual size.)

This has been the first Malt Extract introduced to the *Medical Profession* (1847). No preparation of Malt has been so long and extensively employed as a Medical

Food Nutrient and Tonic.

The following is an abstract from the work on the Pulmonary Diseases published by Prof. PROSPER DE PIETRA SANTA, *at Paris:*

"As a large number of patients lack the necessary power to digest solid food, and would through the use of stimulants be merely excited and weakened, therefore I regard it of immense value to the practitioner to bring to his aid a nutritious tonic and remedy like the *Johann Hoff's* Malt Extract, which will act not only as a tonic, but as a nutrient as well, and which is less exciting than wine as a stimulant."

"I have, during the past eighteen months, made a number of examinations of the principal forms of Malt Extract in the market, and have satisfied myself that the *Johann Hoff's* Malt Extract, imported by Eisner & Mendelson Co., is a genuine Malt Extract, FREE FROM Salicylic Acid or other objectionable substances."

HENRY LEFFMANN, M.D., Phila.

CAUTION: A preparation bottled in New York is being sold as "Hoff's" Malt Extract. To obtain the genuine, original article, please specify "JOHANN HOFF'S MALT EXTRACT, imported by Eisner," which will prevent substitution.

Please Specify

"JOHANN HOFF'S" MALT EXTRACT,
Imported by "EISNER,"
When ordering the Genuine Article.

The Genuine has the signature of "Johann Hoff" and "Moritz Eisner" on the neck of every bottle.

EISNER & MENDELSON CO., Sole Agents for the U. S.,
6 Barclay Street, New York.

A BRIEF SUMMARY

OF

HYPODERMIC MEDICATION.

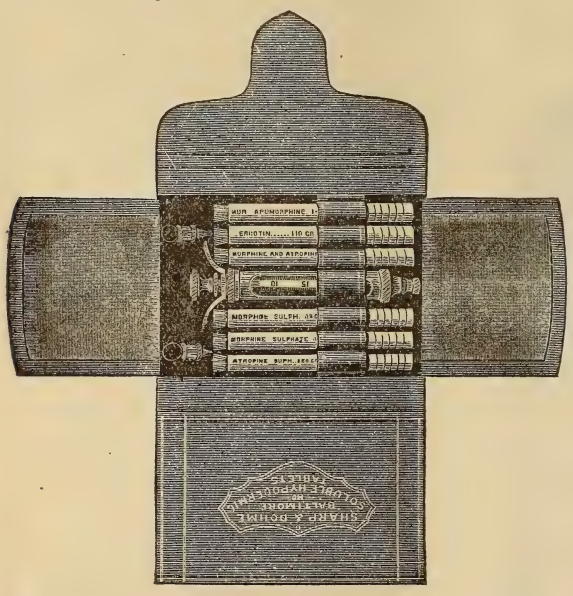
will be sent, with our compliments, when application is made and the name of this journal is mentioned. It quotes Profs. Dujardin-Beaumetz, Bartholow, Anstie, Erb, Echeverria, Mays and others. It contains important and the most recent suggestions on the technique of hypodermic medication, and gives the composition, properties, doses, etc., of our

SOLUBLE HYPODERMIC TABLETS, S. & D.'s.

which are quickly and perfectly soluble in cold or warm water, combining accuracy of dose with perfect preservation of the active ingredient, and the base of which is perfectly harmless and unobjectionable. They will cause no abscesses and will not become insoluble by age. They may also be administered by the mouth, and are

ALWAYS READY FOR INSTANT USE.

We respectfully solicit a trial of these tablets, and will mail samples of them free to readers of this journal.



That the several objections to hypodermic medication might be obviated, we have had manufactured expressly for us a line of

HYPODERMIC SYRINGES, S. & D.'s.,

which have all the latest improvements, are most accurately made of the best materials and so constructed as to allow the

MAKING OF A SOLUTION IN THE SYRINGE.

They are sent to any address at the following prices:

Syringe, in leathered-covered case, two tubes of tablets . . . . . net, $2.50
" " metal case, latest improved style, two tubes of tablets . . . . . " 2.50
" " " " four tubes of tablets . . . . . " 3.50
" " flexible leather case, as shown by cut 3.50

HOME FOR HABITUÉS.

OPIUM, CHLORAL, COCAINE.

DR. J. B. MATTISON,

Continues to receive at his residence, 314 State Street, Brooklyn, N. Y., a limited number of these habitués, to whom he devotes his *exclusive* professional attention. Patients Six. and Select. Attractive apartments, liberal cuisine, desirable privacy, cheerful society, and *personal* professional attention, based on several years' experience in the treatment of this disease. Details on application.

FOR SALE.

A profitable medical and surgical practice, together with a beautiful home, in a live railroad town of 2,500 inhabitants in Southern Tennessee. Practice pays $2,000 per year, cash. Property consists of a neat cottage of nine rooms, good and numerous out-buildings, and grounds of 1½ acres, containing a fine orchard, all small fruits, ornamental trees and shrubbery. A special opportunity for a young man to secure an already established practice. Will sell practice and property for $2.000. For terms of payment and further particulars, address,

2t **B. B., 346** Madison St., Milwaukee, Wisconsin.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—*Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—*Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—*Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. To forward to Physicians upon request:

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

ANTISEPTIC DRAINAGE TUBES.—Glass.

These Tubes have large holes, one-half inch apart, arranged alternately on opposite sides.
They are carefully finished, especial care being taken to make them smooth.
In addition to the drainage-holes, each tube has at one end two smaller holes for the insertion of Safety-Pin, through which it is prevented slipping into the wound.

FURNISHED IN SEVEN SIZES.

No. 1,	$1.25 per doz.	No. 4,	$1.55 per doz.
No. 2,	1.25 "	No. 5,	1.70 "
No. 3,	1.40 "	No. 6,	1.90 "
	No. 7, $2.10 per dozen.		

RAW CAT-GUT. I put this up in coils of 10 feet, four different sizes, Nos. 1, 2, 3, 4 (4 is thickest). Nos. 2 and 3 are the most useful sizes. **No. 1 Coil, 10 Cents; No. 2 Coil, 12 Cents; No. 3 Coil, 14 Cents; No. 4 Coil, 16 Cents.** Full directions with each coil for making it absolutely aseptic.

PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

WILLIAM R. WARNER & CO.'S

PIL. CHALYBEATE COMP.

IN THE TREATMENT OF

LA GRIPPE.

FORMULA:—Carb. Protoxide of Iron, gr. ijss.
Ext. Nux. Vom., ... gr. ⅓

ADVANTAGES:—Does not constipate, is easily absorbed, is nerve tonic and quickly soluble.

The effects left by La Grippe are marked Physical Prostration for which Pill Chalybeate Comp. (Warner & Co.'s) is almost a specific. The assimilable iron, acting as a blood tonic and the Nux Vomica as a stimulant to the spinal cord.

Dose, begin with one pill every four hours and increase to two pills three times a day.

The acute symptoms of La Grippe are controlled by (**EFF. ANTALGIC SALINE**), one dessert spoonful of which contains 4 grains Antipyrine and 4 grains Salicylate Soda. Physicians will not be disappointed in the treatment of La Grippe by trying this salt followed by PILL CHALYBEATE COMP. as above mentioned.

"THE QUEEN OF TABLE WATERS."

"The APOLLINARIS SPRING yields enough water not only for PRESENT REQUIREMENTS but also for those of a FUTURE which is STILL REMOTE.

"The EXISTING SUPPLY is ADEQUATE for FILLING FORTY MILLION quart bottles YEARLY.

"The VOLUME of GAS is so GREAT that it is dangerous to approach the SPRING on a windless day."—THE TIMES, LONDON, 20th September, 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT, AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record,* October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the official preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . . ."

CAUTION.—By specifying in your prescriptions "Ch. Marchand's Peroxide of Hydrogen (Medicinal)," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

Laboratory, 10 West Fourth Street, New York.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russ an, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our **COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & CO.'S. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., **NEW YORK.**

Carried in stock by the principal Wholesale Druggists in the U. S.

EACH BOTTLE REPRESENTS 1-4 POUND
OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a Perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE "PEPTONIZED" BEEF

is manufactured by Prof. Preston B. Rose, of Chicago, late of the faculty of the University of Michigan.

THE ALE USED
IS THE PUREST AND BEST MADE IN AMERICA

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers; also in Typhoid Fever and Dysentery.

Prof. G. A. Liebig says: "A careful chemical examination of the Peptonized Ale and Beef shows a much larger per cent. of nitrogenous blood and muscle-making matter over all other malt extracts, and that it is also rich in Diastase, giving it the power to digest Starch Foods."

PREPARED BY

The Ale and Beef Company,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges. Please mention this journal.

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc. one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point.

MANUFACTURED BY

JOHN WYETH & BROTHER,

PHILADELPHIA, PA.

Doctor:

You may have many patients who at this season of the year present the condition of extreme debility.

Some have passed the winter amidst scenes of constant gayety and the ceaseless whirl of fashionable society, with its balls, suppers and parties following in rapid succession, keeping their nervous tension up to the highest pitch, until, to use their own expression, they feel "utterly worn out." Others, the actors, singers, preachers, lecturers and other public workers, are so fatigued with the excessive mental strain of the winter that they are on the verge of nervous prostration. While still others, in humble circumstances, have endured unusual hardships, exposure and privation.

Overwork and worry are the most potent factors in the failure of health among Americans.

These are all in the most favorable condition for the development of acute disease.

You can rapidly restore them to the normal condition, and thus demonstrate the power of your art, by prescribing for them a thorough and protracted course of the Hypophosphites of Lime and Soda as found in McArthur's Syrup. Here you find these valuable salts in their absolute chemical purity.

Among specialists this is recognized as the chief therapeutic agent by which consumption, before its later stages, can be cured, and the frightful and disgusting ravages of scrofula brought completely under control, while it readily restores the victim of nervous debility.

McArthur's Syrup is prepared solely for prescription by physicians, hence no printed matter accompanies the bottle.

Its use is indicated in all diseases with debilitating discharges, or characterized by faulty nutrition. Always specify McArthur's Syrup, as others contain many ingredients entirely foreign to the case. If you desire other ingredients for use in special cases you can add them to the prescription.

Write for our pamphlet, "The Curability and Treatment of Consumption," (free), and a large sample bottle of McArthur's Syrup, on which you will pay only the express charges.

McARTHUR HYPOPHOSPHITE CO.,

BOSTON, MASS.

GOLD MEDAL, PARIS, 1878.

W. BAKER & Co.'s Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

DR. MASSEY'S PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

NEW YORK.

SOMNAL.

RADLAUER.

CHEMICAL FORMULA: $C_7H_{12}Cl_3O_3N$.

SOMNAL is a new soporific which produces sound sleep within half an hour after taking, and the effect lasting six to eight hours. The dose is **2 or 3 grammes** (half a teaspoonful); it is best administered with extract of licorice or with syrup of raspberry. **Somnal** does not affect either digestion, respiration, or the temperature of the body.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in 60 to 70 cases at the hospital. Doses of 2 grammes have produced a quiet, refreshing sleep, lasting from 6 to 8 hours, without any unpleasant symptoms following its use.

The British Medical Journal says: "*Somnal*," when given in doses of half a teaspoonful, will produce sleep in thirty minutes. The sleep is described as sound and natural, lasting from 6 to 8 hours, and followed by no unpleasant effects.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

Dr. J. S. Ridge, of Kingston, R. I., writes: "I have used Somnal on three cases of insomia, in middle aged and quite old ladies, with beautiful results, having used Sulphonal, Bromidia, Chloralamid with little or no result. I gave a lady 80 years old suffering from Insomnia 3 grammes of Somnal at bedtime in a little Syrup of Raspberry, with splendid effect, she getting, so the nurse says, 6 hours sound sleep. This is the best soporific I have used yet."

S. RADLAUER, - BERLIN.

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

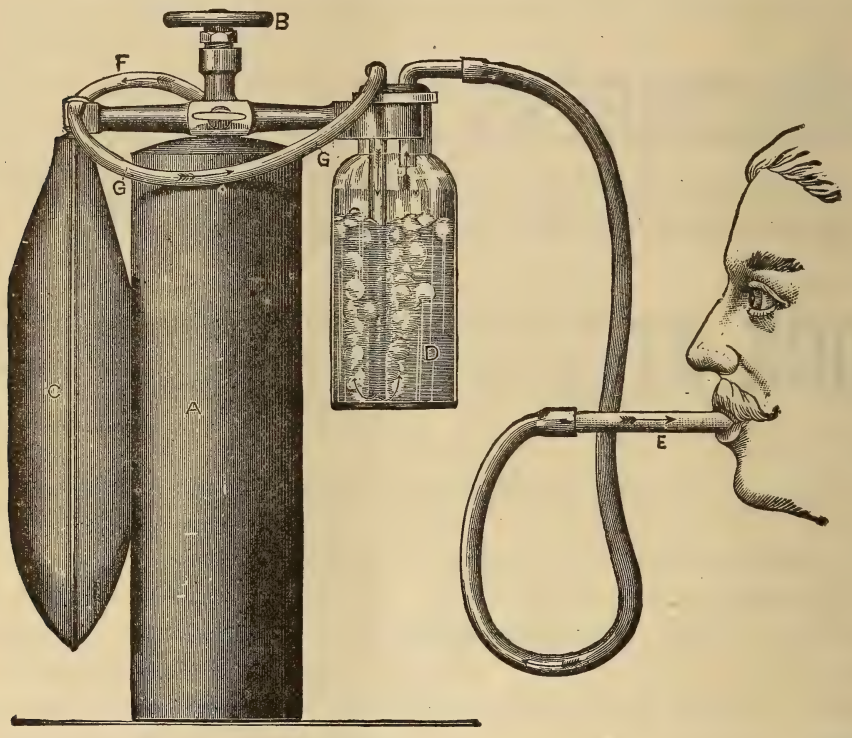
INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

There is no Nourishment

in Tea or Coffee, but plenty in

COCOA

especially in

VAN HOUTEN'S

THE DRINK QUESTION

is ever coming to the front. What beverage shall we drink to quench thirst? The most popular non-intoxicant is cocoa, which is rapidly supplanting tea and coffee as a national beverage. There are many excellent cocoas, but in advance of all other preparations stands VAN HOUTEN'S which is universally declared to be perfectly pure, free from fat, easily digested, delicious to the taste, nutritious, and a stimulant without any depressing after-effects.

VAN HOUTEN'S COCOA was introduced into the household of the late Emperor of Germany upon high recommendation. The senior physician of the London Court Hospital has used this brand of Cocoa for many years. It is strongly recommended to Students and all whose duties involve much wear and tear, whether mental or physical. For these reasons it has earned the highest encomiums of the leading analysts of the day.

What shall we drink to raise the spirits high?
VAN HOUTEN'S COCOA, is the universal cry!
The purest and most delicious;
The best and most nutritious.

VAN HOUTEN'S COCOA - - - - - "BEST & GOES FARTHEST."

☞ It only needs a single trial to convince any one of the superiority of VAN HOUTEN'S COCOA. Please insist upon your grocer or storekeeper ordering it for you, *and take no substitute.* It is put up in one-quarter, one-half, and one-pound cans. ☜ If not obtainable, enclose 25 cents in stamps or postal note to either VAN HOUTEN & ZOON, 106 Reade Street, New York, or 45 Wabash Avenue, Chicago, and a can will be sent by mail, *if you mention this publication.* Prepared only by VAN HOUTEN & ZOON, Weesp-Holland.

VAN HOUTEN'S COCOA - - - - - "ONCE TRIED, ALWAYS USED."

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

"This is an Age of Apollinaris Water."
—Walter Besant.

Apollinaris

"THE QUEEN OF TABLE WATERS."

"Familliar in millions of mouths as any household word.

"The popularity of Apollinaris Water is chiefly due to its irreproachable character.

"More wholesome than any aerated water which art can supply."—THE TIMES, LONDON.

"Of late years the Queen, by the advice of Sir William Jenner, has usually taken Apollinaris Water.—THE WORLD, LONDON.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

Constipation.

Pavarn Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle, (25 pills), 25 cents; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps,

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Suppositories

FOR THE TREATMENT OF

Hæmorrhoids or Piles.

Topliff's Suppositories supply what physicians and the public have long desired, namely, a *simple, effective,* and *perfectly harmless* remedy for hæmorrhoids or piles.

Physicians thoroughly approve of these Suppositories because they are so effective, and will not interfere in the slightest degree with any other medical treatment.

Price 50 cents per box, (24 Suppositories). Liberal discount to physicians. Two boxes will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

FRAUD.

Unscrupulous parties are selling an inferior Wine, calling it Royal Tokay, thus profiting by the numberless Medical Editorials written about our genuine product. The Wine cannot be used as a substitute for ours, and many physicians have unjustly blamed us for damage done, imagining they were securing our Wine, which they had already tested with complete satisfaction. Your patients will not secure the Wine you prescribe unless you specify CALVICO TOKAY, by which name it will hereafter be known.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

LONDON. PARIS. CALCUTTA. MONTREAL.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{1000}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

ESTABLISHED 16 YEARS. BEWARE OF IMITATIONS.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE.

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, **"With Iron, No. 1;"** while the same preparation, **Without Iron,** is designated on the label as **"No. 2."**

In prescribing this preparation, physicians should be particular to mention *"COLDEN'S,"* viz., *"Ext. Carnis Fl. Comp. (Colden)."* A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. *Sold by druggists generally.*

C. N. CRITTENTON, General Agent, 115 Fulton St., New York.

GLENN'S SULPHUR SOAP.

BEWARE OF COUNTERFEITS.

Physicians know the great value of the local use of Sulphur in the **Treatment of Diseases of the Skin.**

Constantine's Pine-Tar Soap.

THE BEST SOAP MADE.

Has been on trial among physicians for very many years as a healing agent. **By far the Best Tar Soap made.**

Wholesale Depot, C. N. CRITTENTON, 115 Fulton St, New York.

Samples of above Soaps SENT FREE, on application, to any Physician enclosing card

Plain Cod Liver Oil *is indigestible, deranges the stomach, destroys the appetite is not assimilated,* and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be *digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,* and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in *Anæmia, Consumption* and all wasting conditions. It also contains the *Hypophosphites of Lime and Soda with Glycerine,* which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other *so-called Emulsions* that invariably separate, and hence their integrity and value is destroyed. *Scott's Emulsion is palatable and absolutely permanent* hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

Maltine

WITH

COD LIVER OIL

A combination of the best Norwegian Cod Liver Oil with MALTINE, in which, by the vacuum process, rancidity is prevented and disagreeable odor and taste of the oil removed.

Base a Powerful Reconstructive

Contains No Inert Emulsifier

Does not disturb Digestion nor offend the Palate

Is an active Starch Digester and Tissue Builder.

Produces rapid Improvement in Appetite.

Is used where "Emulsions" cannot be tolerated.

A complete list of the Maltine Preparations and their formulæ will be sent on application.

THE MALTINE MANUFACTURING CO.

New York, N. Y.

(Please mention this Journal.)

PHILLIPS' COD LIVER OIL

EMULSION.

A TRUE EMULSION WITHOUT SAPONIFICATION.

In all essential features, it represents the highest degree of perfection in the Emulsionizing of Cod Liver Oil.

This preparation is not advertised to the public, and enjoys Professional popularity because of its high standard of excellence, uniformity and reliability.

(*A pamphlet, with formula, Photo-Micrographic illustrations, etc., mailed upon application.*)

PHOSPHO-MURIATE OF QUININE,

COMPOUND.

A RELIABLE ALTERATO-CONSTRUCTIVE,

Particularly indicated in conditions of **disturbed nutrition** and **tissue retrograde.**
An easily appropriated general tonic, promoting digestion, and safe under prolonged use.
A permanent combination of the soluble Wheat Phosphates, with Muriate of Quinine, Iron and Strychnia.
Of greater strength than the various Hypophosphite compounds.

DIGESTIBLE COCOA.
WHEAT PHOSPHATES.
MILK OF MAGNESIA.

THE CHAS. H. PHILLIPS CHEMICAL CO.,
77 PINE STREET, NEW YORK.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless.
Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volumé solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . . 1 gr.
Ferri Valerianat, . . . 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"Editor Medical Brief, St. Louis, Mo.:

"The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(M. ft. pil. No. 20. Sig. One, three times a day.)

"The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.

"Please try them and report. Your success will be sure.

"S. A. DE FOE, M. D.,
"Washington, N. Y."

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

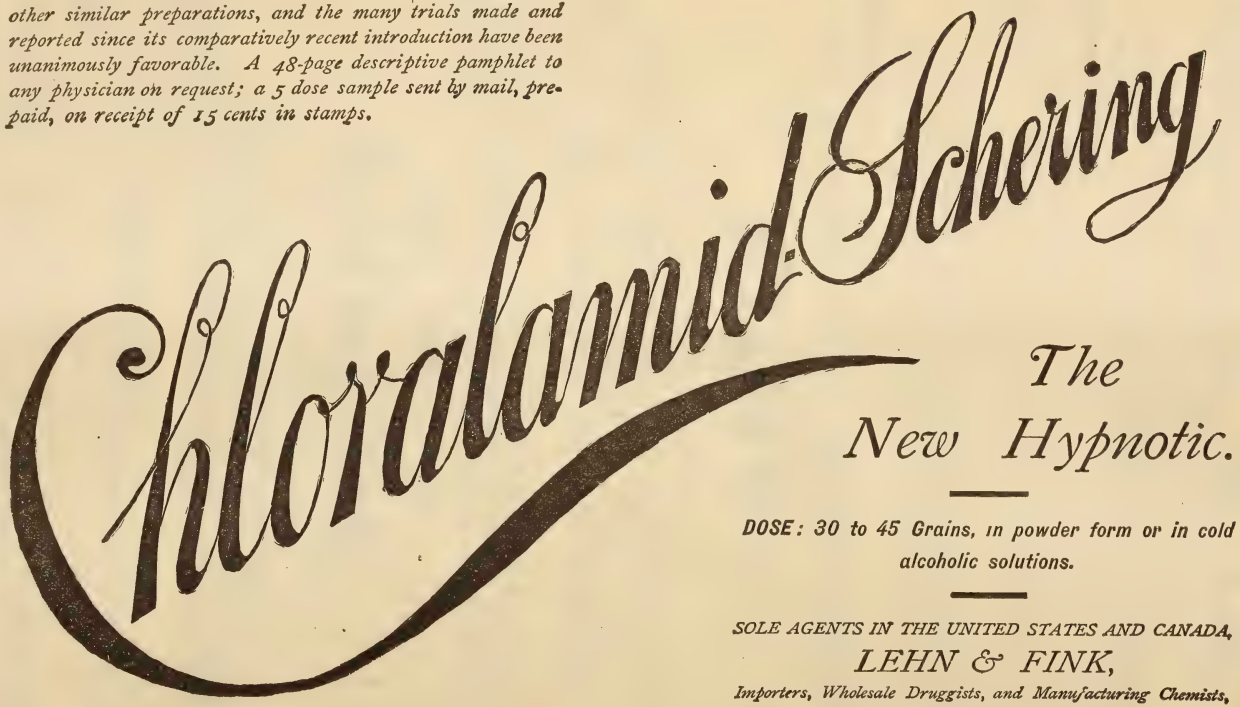
W. H. Schieffelin & Co.,

170 & 172 William Street,

NEW YORK.

In prescribing be particular to specify W. H. S. & Co.'s.

CHLORALAMID possesses undoubted advantages over other similar preparations, and the many trials made and reported since its comparatively recent introduction have been unanimously favorable. A 48-page descriptive pamphlet to any physician on request; a 5 dose sample sent by mail, prepaid, on receipt of 15 cents in stamps.



The New Hypnotic.

DOSE: 30 to 45 Grains, in powder form or in cold alcoholic solutions.

SOLE AGENTS IN THE UNITED STATES AND CANADA,

LEHN & FINK,

Importers, Wholesale Druggists, and Manufacturing Chemists,

NEW YORK.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

LAPACTIC PILLS, S. & D.'s.

(PILULÆ LAPACTICÆ.)

Aloin	1-4 gr.
Strychnine	1-60 gr.
Ext. Belladonna	1-8 gr.
Ipecac	1-16 gr.

An elegant and most efficient combination **introduced by us** and found in practice to possess superior advantages over similar formulæ for the relief of

HABITUAL CONSTIPATION, ATONIC DYSPEPSIA, BILIARY ENGORGEMENT AND MANY GASTRIC DISORDERS.

☞ **Since we introduced our Lapactic Pills**—some four years ago—a number of manufacturers have adopted the same formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term **"Lapactic Pills, S. & D.'s"** when prescribing these pills. **Dose: One to two pills when going to bed.**

PAN-PEPTIC TABLETS, S. & D.'s.

A TONIC DIGESTIVE.

Pure Pepsin	1 gr.
Pure Pancreatin	1 gr.
Pure Caffeine	¼ gr.
Acid Lacto-Phosphate of Calcium.	
Celery.	

The **Pepsin** and **Pancreatin** used in these tablets possess highest digestive power, and cannot fail to promptly start and accomplish

THE DIGESTION OF FOOD.

Whilst the **Caffeine,** by its stimulant tonic action on stomach and bowels, assists and quickens the normal digestion and assimilation of food, the **Acid Lacto-Phosphate of Calcium** contributes to the tonic action of the tablets, and aids to build up the general system, and a small quantity of that refreshing aromatic nerve stimulant, **Celery,** imparts a pleasant flavor and acts as an appetizer.

REED & CARNRICK WILL NEVER ADD ANY NEW PREPARATIONS TO THEIR LIST UNLESS THEY POSSESS IMPORTANT POINTS OF SUPERIORITY OVER THOSE IN USE BY THE MEDICAL PROFESSION FOR SIMILAR PURPOSES.

WE ARE CONFIDENT that the following preparations for the purposes described are superior to any therapeutic agents known to the Medical Profession, or are presented in more elegant form for administration. We will forward a sample to any Physician without charge. This offer holds good for one order only.

ZYMOCIDE (ANTISEPSINE.)	For **Leucorrhœa, Catarrh** of the nasal organs, stomach or bladder, and **all diseases** of the **mucous Surfaces,** or whenever a non-toxic, antiseptic and detergent preparation is required.
PANCROBILIN	For **Intestinal Indigestion, Constipation** and to **increase fatty tissue.** The price of Pancrobilin has been reduced 33 per cent.
CORDIAL ANALEPTINE	For **Rheumatic and Gouty Diathesis** and **excessive Urates.**
CORRIGENT PILLS	For **imparting tone to the sytem, increasing** the **appetite, improving** the **digestion, enhancing** the **functions of assimilation** and **blood-making** and removing **malarial** and other **taint** from the blood.
SULPHO-CALCINE	For **dissolving** the **diphtheritic membrane** and for treating diseases of the mucous surfaces. Valuable in parasitic skin diseases.
LACTO-PREPARATA	For the **Feeding** of **Infants** from **birth** to **six months** of age. The only **All-Milk Food prepared** for Infants.
CARNRICK'S FOOD	For **Children** from **six months** to **fifteen months** of age.
SULPHUR-TARTRATE TABLETS	For **Biliousness, Torpid Liver, Skin Diseases, Pimples** and **Imperfect growth** of the **nails** and **hair.**
COD LIVER OIL AND MILK	For all purposes where **Cod Liver Oil** is indicated. The most palatable and digestible preparation in the market.
VELVET-SKIN SOAP	For making the skin soft. It is a **perfect Soap** for **Infants** and all **Toilet Purposes.** It is made only from Vegetable Oils.
VELVET-SKIN POWDER	For **Infants** and **all Toilet Purposes.** It excels all others in **delicacy** and **fragrance.** Contains no starch or deleterious substances.

Send for pamphlet giving minute formulas and full description of each preparation.

REED & CARNRICK,

P. O. Box 3042,

NEW YORK.

SIR MORELL MACKENZIE, in the *Journal of Laryngology*, published in London, says the following:

"Most of the German Saline Springs are situated on a range of the Taunus Hills. Of these, unquestionably one of *the very best* is

SODEN.

"Containing, as it does, some 23 springs, with a temperature varying between 12° to 18° C., the waters of which are charged with Chloride of Sodium in varying degrees up to 116 Grammes per litre, and some of which are further charged with Carbonic Acid, the Health Resort of Soden is unquestionably one of the very best places for the treatment of Pulmonary and Catarrhal complaints.

"COMPRESSED PASTILLES of the Soden Water are now an article of commerce, as well as the mineral waters. These are made from two of the well-waters, and containing a large amount of Chloride of Sodium, are particularly serviceable in pharyngeal catarrhs, and may even in some degree be used where it is desired to obtain the effect of the Soden treatment, in persons who are unable to make the necessary journey to the Spa itself. I have watched the effects of the Soden Waters for a considerable period, and regard them as extremely valuable in obstinate catarrhal affections of the throat. The small amount of iron which they contain renders them very useful in the stages of Throat Consumption, and they do good in nearly all cases of relaxation of the mucous membrane.

"The Pastilles offer a most convenient method of using the Waters; producing both a local and general effect. They are especially beneficial in catarrhal diseases of the air-passages; I have frequently found them of great service in the case of singers and public speakers.

(Signed) "MORELL MACKENZIE, M. D., LONDON."

DR. NORRIS WOLFENDEN, Senior Physician Throat Hospital, London, writes:

"SIR:—The Wells of Soden are known to possess most powerful medicinal virtues, and have been found of the utmost benefit in the treatment of Catarrhal conditions of the upper respiratory tract, such as Bronchitis and Emphysema, and even in Pulmonary Phthisis. Many chronic throat conditions are equally benefited. Possessing a large amount of Sodium Chloride in their composition, they have a character which is quite special, and the fact that the several Wells of Soden contain varying amounts of this important mineral constituent, renders it possible to treat many complaints of opposite nature on the same spot.

"I consider the 'Soden Mineral Pastilles,' which you have introduced to me, to be a most convenient and pleasant mode of obtaining the medicinal benefits of the Soden Wells. They form an agreeable and effective lozenge, and I feel certain will be of great service to patients afflicted with certain forms of chronic throat disease. Sprays of the same waters would, I am sure, be of much service. I hope your efforts to introduce the Soden Mineral Waters and Pastilles into this country will meet with success.

"I am, Sir, yours faithfully,

(Signed) "R. NORRIS WOLFENDEN, M.D. Cantab.,

"Senior Physician Throat Hospital, London; Editor of Journal of Laryngology."

SAMPLES AND PAMPHLETS MAILED UPON APPLICATION.

Soden Mineral Springs Co., Ld., Sole Agents,

P. O. BOX 3319, NEW YORK.

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC. NON-IRRITANT. NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request.

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

PHILADELPHIA.

Physical Exhaustion

HORSFORD'S ACID PHOSPHATE.

It is a well-known physiological fact that the phosphates are involved in all waste and repair, and are consumed with every effort. The quantity secreted by the kidneys is increased by labor of the muscles.

In the healthy organization the phosphate of lime exists in the muscles and bones. This phosphate is supplied by this preparation in such form as to be readily assimilated.

Dr. J. P. COWLES, Camden, Me., says: "I have used it in cases of physical debility arising from exhaustive habits or labors, with beneficial results."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{20}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{70}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

The S. S. White Dental Manufacturing Company,

AT EITHER OF THE BELOW NAMED PLACES:

Twelfth and Chestnut Sts., Philadelphia, Pa. 160 Tremont St., Boston, Mass.
767 and 769 Broadway (cor. 9th St.), New York, N. Y. 151 and 153 Wabash Ave., Chicago, Ill.
1260 and 1262 Broadway (cor. 32d St.), New York, N. Y. 444 Fulton St., Brooklyn, N. Y.

LASSAR'S TREATMENT FOR BALDNESS.

"Shampoo the head thoroughly for ten minutes with Packer's tar soap. Wash out the lather with plenty of warm water followed by cold water. Dry the hair and apply:

℞ Lassar's Treatment and a half-cake of Packer's Tar Soap will be mailed to any Physician on receipt of four stamps. Address

THE PACKER MFG. CO., 100 FULTON ST., NEW YORK.

"The whole process is said to take about fifteen minutes, and to be very agreeable. Let me stimulate you to try this plan of treatment by telling you that I have seen it cause the scalp of one physician to take on a revigorated growth of hair."—GEORGE THOMAS JACKSON, M. D., *Chief of Dermatological Clinic, College of Phys. and Surg., New York, etc.* (*Gaillard's Med. Jour., May, 1890*).

HOME FOR HABITUÉS.

OPIUM, CHLORAL, COCAINE.

DR. J. B. MATTISON,

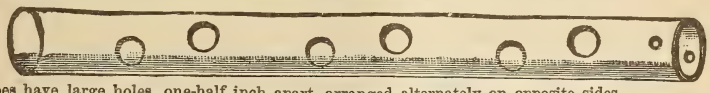
Continues to receive at his residence, 314 State Street, Brooklyn, N. Y., a limited number of these habitués, to whom he devotes his *exclusive* professional attention. Patients Six. and Select. Attractive apartments, liberal cuisine, desirable privacy, cheerful society, and *personal* professional attention, based on several years' experience in the treatment of this disease. Details on application.

A RARE CHANCE

for a physician desiring to locate and take up a good country practice. On March 26, at Stanton, Hunt Co., N. J., will be sold at public auction, the property owned and occupied by J. D. STIGER, M. D., deceased; said property has been owned and occupied for the last 40 years by physicians. There is no doctor resident within a radius of six miles. Any inquiries cheerfully answered by

2t B. BLOYS, Stanton, N. J.

ANTISEPTIC DRAINAGE TUBES.—Glass.



These Tubes have large holes, one-half inch apart, arranged alternately on opposite sides.
They are carefully finished, especial care being taken to make them smooth.
In addition to the drainage-holes, each tube has at one end two smaller holes for the insertion of Safety-Pin, through which it is prevented slipping into the wound.

FURNISHED IN SEVEN SIZES.

No. 1,	$1.25 per doz.	No. 4,	$1.55 per doz.
No. 2,	1.25 "	No. 5,	1.70 "
No. 3,	1.40 "	No. 6,	1.90 "
	No. 7, $2.10 per dozen.		

RAW CAT-GUT. I put this up in coils of 10 feet, four different sizes, Nos. 1, 2, 3, 4 (4 is thickest). Nos. 2 and 3 are the most useful sizes. **No. 1 Coil, 10 Cents; No. 2 Coil, 12 Cents; No. 3 Coil, 14 Cents; No. 4 Coil, 16 Cents.** Full directions with each coil for making it absolutely aseptic.

WILLIAM SNOWDEN,

Manufacturer, Importer and Exporter of Surgical Instruments,

No. 121 SOUTH ELEVENTH STREET, PHILADELPHIA.

CH. MARCHAND'S PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

Charles Marchand

SOLD BY LEADING DRUGGISTS.

Laboratory, 10 West Fourth Street, New York.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine,* Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BLAUD

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Avenue, NEW YORK.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1890—91.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation. A three years' graded course is also provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

FOR SALE.

A practice worth $3,500 a year with a well-equipped office, situated in a thriving town, with good railroad advantages, schools, churches, and good society, indifferent competition and good pay. For particulars, address,

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S
PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

Mellin's Food
FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

BOSTON, MASS.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our **COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.
Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

St. Vincent Home Maternity Hospital,

70th Street and Woodland Avenue,

(PASCHALL STATION) PHILADELPHIA.

Conducted by the Sisters of Charity.

INFANTS and Children under two years of age received.

Patients for MATERNITY DEPARTMENT accommodated according to their means.

IN THE WARDS terms range from $5.00 to $8.00 per week.

IN THE PRIVATE ROOMS terms range from $10.00 to $20.00 per week.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M.D.

Ale & Beef

"PEPTONIZED"

(EXTRACT:—BOVIS CUM MALTO.)

Is the identical combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a Perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE "PEPTONIZED" BEEF

is manufactured by Prof. Preston B. Rose, of Chicago, late of the faculty of the University of Michigan.

THE ALE USED

IS THE PUREST AND BEST MADE IN AMERICA

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers; also in Typhoid Fever and Dysentery.

Prof. G. A. Liebig says: "A careful chemical examination of the Peptonized Ale and Beef shows a much larger per cent. of nitrogenous blood and muscle-making matter over all other malt extracts, and that it is also rich in Diastase, giving it the power to digest Starch Foods."

PREPARED BY

The Ale and Beef Company,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges. Please mention this journal.

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

Doctor:

You may have many patients who at this season of the year present the condition of extreme debility.

Some have passed the winter amidst scenes of constant gayety and the ceaseless whirl of fashionable society, with its balls, suppers and parties following in rapid succession, keeping their nervous tension up to the highest pitch, until, to use their own expression, they feel "utterly worn out." Others, the actors, singers, preachers, lecturers and other public workers, are so fatigued with the excessive mental strain of the winter that they are on the verge of nervous prostration. While still others, in humble circumstances, have endured unusual hardships, exposure and privation.

Overwork and worry are the most potent factors in the failure of health among Americans.

These are all in the most favorable condition for the development of acute disease.

You can rapidly restore them to the normal condition, and thus demonstrate the power of your art, by prescribing for them a thorough and protracted course of the Hypophosphites of Lime and Soda as found in McArthur's Syrup. Here you find these valuable salts in their absolute chemical purity.

Among specialists this is recognized as the chief therapeutic agent by which consumption, before its later stages, can be cured, and the frightful and disgusting ravages of scrofula brought completely under control, while it readily restores the victim of nervous debility.

McArthur's Syrup is prepared solely for prescription by physicians, hence no printed matter accompanies the bottle.

Its use is indicated in all diseases with debilitating discharges, or characterized by faulty nutrition. Always specify McArthur's Syrup, as others contain many ingredients entirely foreign to the case. If you desire other ingredients for use in special cases you can add them to the prescription.

Write for our pamphlet, "The Curability and Treatment of Consumption," (free), and a large sample bottle of McArthur's Syrup, on which you will pay only the express charges.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* **a slowly but progressively active hypnotic.** *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* **time** *when the remedy should be administered; second, the* **method** *of administration; third, the* **dose.**"

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of **hot** *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be **certain** *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* **only** *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

CHLORALAMID possesses undoubted advantages over other similar preparations, and the many trials made and reported since its comparatively recent introduction have been unanimously favorable. Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% OF METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLYBOSKOS

GREEK {Polus - much / Boskos - nourishing

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS and INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC Especially for Diabetics.

Supplies the waning energies of the young babe.

Stimulates and increases the health of the growing child.

Aids the weakest stomach and digestion.

Stimulates appetites in dyspepsia and convalescence from wasting diseases.

A BRIEF SUMMARY
OF
HYPODERMIC MEDICATION.

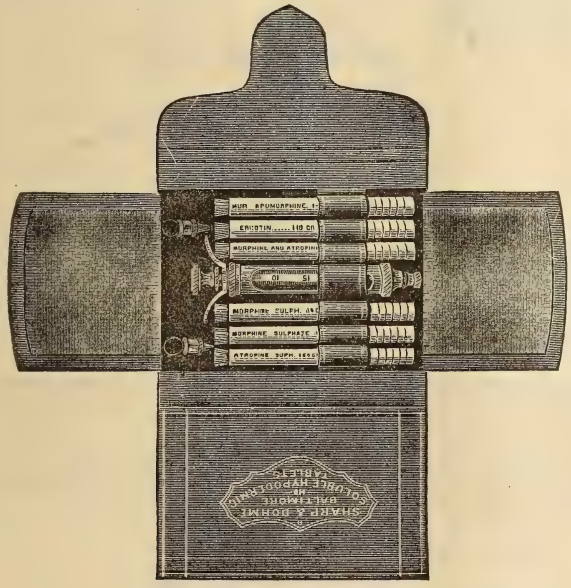
will be sent, with our compliments, when application is made and the name of this journal is mentioned. It quotes Profs. Dujardin-Beaumetz, Bartholow, Anstie, Erb, Echeverria, Mays and others. It contains important and the most recent suggestions on the technique of hypodermic medication, and gives the composition, properties, doses, etc., of our

SOLUBLE HYPODERMIC TABLETS, S. & D.'s.

which are quickly and perfectly soluble in cold or warm water, combining accuracy of dose with perfect preservation of the active ingredient, and the base of which is perfectly harmless and unobjectionable. They will cause no abscesses and will not become insoluble by age. They may also be administered by the mouth, and are

ALWAYS READY FOR INSTANT USE.

We respectfully solicit a trial of these tablets, and will mail samples of them free to readers of this journal.



That the several objections to hypodermic medication might be obviated, we have had manufactured expressly for us a line of

HYPODERMIC SYRINGES, S. & D.'s,

which have all the latest improvements, are most accurately made of the best materials and so constructed as to allow the

MAKING OF A SOLUTION IN THE SYRINGE.

They are sent to any address at the following prices:

Syringe, in leathered-covered case, two tubes of tablets . . . . . net, $2.50
" " metal case, latest improved style, two tubes of tablets . . . . . " 2.50
" " " " four tubes of tablets . . . . . " 3.50
" " flexible leather case, as shown by cut 3.50

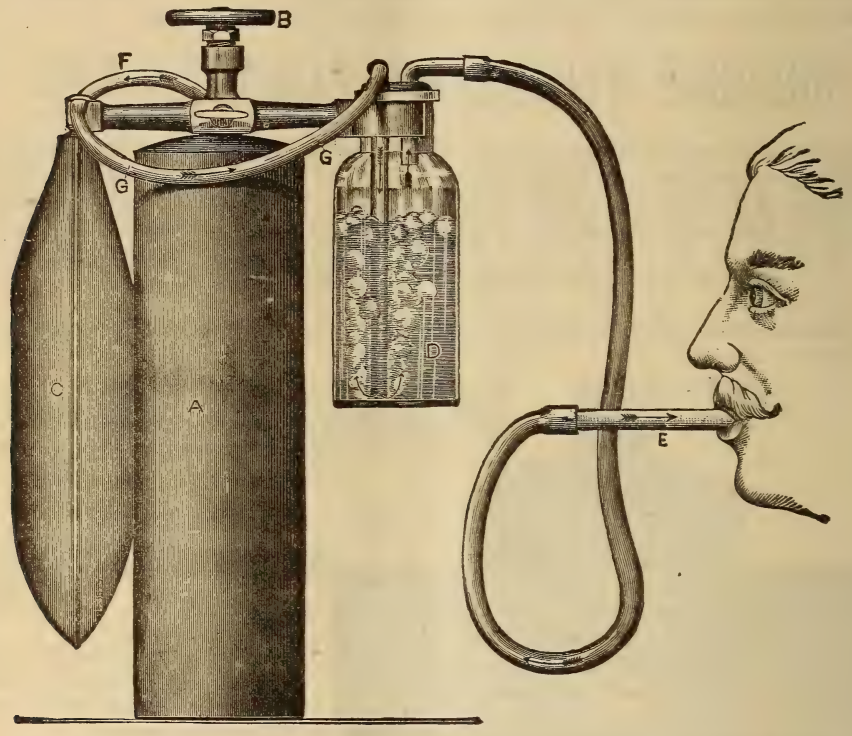
ESTABLISHED 1860. 3 **BALTIMORE, MD.**

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

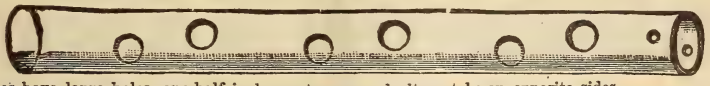
DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request.

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

ANTISEPTIC DRAINAGE TUBES.—Glass.



These Tubes have large holes, one-half inch apart, arranged alternately on opposite sides.
They are carefully finished, especial care being taken to make them smooth.
In addition to the drainage-holes, each tube has at one end two smaller holes for the insertion of a Safety-Pin, through which it is prevented slipping into the wound.

FURNISHED IN SEVEN SIZES.

No. 1, $1.25 per doz.		No. 4, $1.55 per doz.	
No. 2, 1.25	"	No. 5, 1.70	"
No. 3, 1.40	"	No. 6, 1.90	"
No. 7, $2.10 per dozen.			

RAW CAT-GUT. I put this up in coils of 10 feet, four different sizes, Nos. 1, 2, 3, 4 (4 is thickest). Nos. 2 and 3 are the most useful sizes. **No. 1 Coil, 10 Cents; No. 2 Coil, 12 Cents; No. 3 Coil, 14 Cents; No. 4 Coil, 16 Cents.** Full directions with each coil for making it absolutely aseptic.

Antikamnia

OPPOSED TO PAIN

A SUCCEDANEUM FOR MORPHIA.

1-OZ. PACKAGE, $1.00, PREPAID.

Valuable in Neuralgia, Sciatica, Acute Rheumatism and Typhoid Fever; also Headache and other Neuroses due to Irregularities of Menstruation. Exhibited in Asthma, Hay Fever, Influenza, La Grippe and Allied Complaints, it secures the desired result. ☞Further information and samples sent free on application.

ANTIKAMNIA CHEMICAL COMPANY, ST LOUIS, MO.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

GOUDRON DE BLOUNT

PREPARED FROM THE GENUINE CAROLINA TAR.

DOSE.—One fluid drachm four or more times a day (as indicated), either full strength, diluted, or, in combination.

INDICATIONS.—Chronic and acute affections of the Air Passages, Coughs, Colds, Bronchitis, Asthma and Consumption.

WILLIAM MURRELL, M.D., F.R.C.P.,

Lecturer on Pharmacology and Therapeutics at the Westminster Hospital; Examiner in Materia Medica to the Royal College of Physicians of London; Fellow of the Medico-Chirurgical College of Philadelphia,

Says:—"I have used with success 'Goudron de Blount.' The results have been good, and the preparation is popular with patients."

PREPARED EXCLUSIVELY FOR PHYSICIANS' PRESCRIPTIONS BY

17,670,000 BOTTLES FILLED IN 1890.

Apollinaris

"THE QUEEN OF TABLE WATERS."

"*The APOLLINARIS SPRING yields enough water not only for PRESENT REQUIREMENTS but also for those of a FUTURE which is STILL REMOTE.*

"*The EXISTING SUPPLY is ADEQUATE for FILLING FORTY MILLION quart bottles YEARLY.*

"*The VOLUME of GAS is so GREAT that it is dangerous to approach the SPRING on a windless day.*"—THE TIMES, LONDON, 20th September, 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Constipation.

Pavara Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle, (25 pills), 25 cents; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps,

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Suppositories

FOR THE TREATMENT OF

Hæmorrhoids or Piles.

Topliff's Suppositories supply what physicians and the public have long desired, namely, a *simple, effective,* and *perfectly harmless* remedy for hæmorrhoids or piles.

Physicians thoroughly approve of these Suppositories because they are so effective, and will not interfere in the slightest degree with any other medical treatment.

Price 50 cents per box, (24 Suppositories). Liberal discount to physicians. Two boxes will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

ESTABLISHED 1858.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. MCKENNAN, 810 Penn Ave.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

☞ DOGS NOT TAKEN.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

PHILADELPHIA POLYCLINIC

THE PHILADELPHIA POLYCLINIC

HAS MOVED TO

EIGHTEENTH AND LOMBARD STREETS,

AND OCCUPIED ITS

NEW COLLEGE AND HOSPITAL BUILDING

The Finest Structure of the kind in America.

DR. MASSEY'S

PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

PREVENTING CONSUMPTION.

That Consumption is a contagious disease may be disputed; but, that it is in a very great degree infectious must be admitted, as according to statistics gleaned by the most competent authorities "one-seventh of the people who die from tuberculosis acquire the disease from breathing the air tainted with contagion by a person already affected."

It follows, therefore, by way of prevention of the disease, the most practical results must be looked for in the prompt destruction or disinfection of the materials thrown off by the Consumptive. The sputa expectorations and nasal discharges are offensive, poisonous, and dangerous, and through them the dread disease is passed along.

The liberal use of a reliable inodorous and inexpensive disinfectant about the sick-room is always an aid toward recovery for the patient, and a blessing as well as a protection to the attendants and friends, and this is equally true in cases of Consumption and ailments tending that way.

The practical advice of an experienced and most successful physician in this relation we sum up as follows: "Give your patient every chance. Keep the room pleasant, the air sweet and pure. Always have a bottle of Platt's Chlorides handy in the room. Put a mixture of one part chlorides to six or eight of water in the vessels before using, and keep a solution of this strength constantly in the cuspidor, or spittoon. This popular disinfectant has no smell, so your patient will not be annoyed; neither is it dangerous to use, as it contains no mercury.

"Should the patient be confined to the bed relieve the atmosphere of the room by occasionally shaking a towel wet with a mixture of one part chlorides to ten of water, and then leave the moistened towel hanging to the gas-bracket or any convenient hook. It is astonishing how quickly and thoroughly the air is changed and sweetened by this simple process, and how gratefully the patient will appreciate it."

To use this disinfectant frequently and liberally costs but a little, as a quart bottle is supplied by the apothecary at 50 cents, and this quantity is sufficient to prepare two to three gallons of disinfecting liquid of ample strength for general household and sick-room purposes.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)		Soda.....1-3 Grains	
Distilled Water.....35 "		Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.		Hyocholic Acid.....1-20 "	

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . 1 gr.
Ferri Valerianat, . . . 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"*Editor Medical Brief, St. Louis, Mo.:*

"*The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.*

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(*M. ft. pil. No. 20. Sig. One, three times a day.*)

"*The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.*

"*Please try them and report. Your success will be sure.*

"*S. A. DE FOE, M. D.,*
"*Washington, N. Y.*"

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.

Dr. D. R. Patterson, in London *Lancet*, Oct. 26th, 1889.

Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.

Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.

Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.

Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No 31, 1889.

Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.

Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.

British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.

Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.

Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.

Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico Chirurgical College of Philadelphia, Pa.

Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.

Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)

Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.

Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.

Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane. Jamestown, N. D.

Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.

Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.

Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

Lehn & Fink, IMPORTERS OF DRUGS AND NEW REMEDIES. **New York.**

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

ESTABLISHED 1860. 1 **BALTIMORE, MD.**

REED & CARNRICK WILL NEVER ADD ANY NEW PREPARATIONS TO THEIR LIST UNLESS THEY POSSESS IMPORTANT POINTS OF SUPERIORITY OVER THOSE IN USE BY THE MEDICAL PROFESSION FOR SIMILAR PURPOSES.

WE ARE CONFIDENT that the following preparations for the purposes described are superior to any therapeutic agents known to the Medical Profession, or are presented in more elegant form for administration. We will forward a sample to any Physician without charge. This offer holds good for one order only.

ZYMOCIDE (ANTISEPSINE.)	For **Leucorrhœa, Catarrh** of the nasal organs, stomach or bladder, and **all diseases** of the **mucous Surfaces,** or whenever a non-toxic, antiseptic and detergent preparation is required.
PANCROBILIN	For **Intestinal Indigestion, Constipation** and to **increase fatty tissue.** The price of Pancrobilin has been reduced 33 per cent.
CORDIAL ANALEPTINE	For **Rheumatic and Gouty Diathesis** and **excessive Urates.**
CORRIGENT PILLS	For **imparting tone to the sytem, increasing** the **appetite, improving** the **digestion, enhancing** the **functions** of **assimilation** and **blood-making** and removing **malarial** and other **taint** from the blood.
SULPHO-CALCINE	For **dissolving** the **diphtheritic membrane** and for treating diseases of the mucous surfaces. Valuable in parasitic skin diseases.
LACTO-PREPARATA	For the **Feeding** of **Infants** from **birth** to **six months** of age. The only **All-Milk Food prepared** for Infants.
CARNRICK'S FOOD	For **Children** from **six months** to **fifteen months** of age.
SULPHUR-TARTRATE TABLETS	For **Biliousness, Torpid Liver, Skin Diseases, Pimples** and **Imperfect growth** of the **nails** and **hair.**
COD LIVER OIL AND MILK	For all purposes where **Cod Liver Oil** is indicated. **The** most palatable and digestible preparation in the market.
VELVET-SKIN SOAP	For making the skin soft. It is a **perfect Soap** for **Infants** and all **Toilet Purposes.** It is made only from Vegetable Oils.
VELVET-SKIN POWDER	For **Infants** and **all Toilet Purposes.** It excels all others in **delicacy** and **fragrance.** Contains no starch or deleterious substances.

Send for pamphlet giving minute formulas and full description of each preparation.

REED & CARNRICK,

P. O. Box 3042,

NEW YORK.

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, New York.

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% OF METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

GREEK {Polus - much / Boskos - nourishing

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC

Especially for Diabetics.

Supplies the waning energies of the young babe.

Stimulates and increases the health of the growing child.

Aids the weakest stomach and digestion.

Stimulates appetites in dyspepsia and convalescence from wasting diseases.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request.

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

ANTISEPTIC DRAINAGE TUBES.—Glass.

These Tubes have large holes, one-half inch apart, arranged alternately on opposite sides.
They are carefully finished, especial care being taken to make them smooth.
In addition to the drainage-holes, each tube has at one end two smaller holes for the insertion of Safety-Pin, through which it is prevented slipping into the wound.

FURNISHED IN SEVEN SIZES.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

Sup't Walnut Lodge, Hartford, Conn.

WILLIAM R. WARNER & CO.'S

PIL. CHALYBEATE COMP.

IN THE TREATMENT OF

LA GRIPPE.

FORMULA:—Carb. Protoxide of Iron, gr. ijss.
Ext. Nux. Vom., ... gr. ⅛

ADVANTAGES:—Does not constipate, is easily absorbed, is nerve tonic and quickly soluble.

The effects left by La Grippe are marked Physical Prostration for which Pill Chalybeate Comp. (Warner & Co.'s) is almost a specific. The assimilable iron, acting as a blood tonic and the Nux Vomica as a stimulant to the spinal cord.

Dose, begin with one pill every four hours and increase to two pills three times a day.

The acute symptoms of La Grippe are controlled by (EFF. ANTALGIC SALINE), one dessert spoonful of which contains 4 grains Antipyrine and 4 grains Salicylate Soda. Physicians will not be disappointed in the treatment of La Grippe by trying this salt followed by PILL CHALYBEATE COMP. as above mentioned.

"This is an Age of Apollinaris Water."

—Walter Besant.

Apollinaris

"THE QUEEN OF TABLE WATERS."

"Familiar in millions of mouths as any household word.

"The popularity of Apollinaris Water is chiefly due to its irreproachable character.

"More wholesome than any aerated water which art can supply."—THE TIMES, LONDON.

"Of late years the Queen, by the advice of Sir William Jenner, has usually taken Apollinaris Water.—THE WORLD, LONDON.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

BOOKS FOR SUBSCRIBERS.

BY SPECIAL ARRANGEMENT with the publishers we are able at this time to offer the following first-class and very valuable books (last editions) at a very low price, when taken in connection with paid-up subscriptions. Subscribers will see that we have put in this list thoroughly good books.

FOR **$10.00**

REPORTER for one year, . . . **$5.00**

HEATH'S DICTIONARY OF PRACTICAL SURGERY. Cloth, . . . **$7.50**

FOR **$ 9.00**

REPORTER for one year, . . . **$5.00**

LEIDY'S HUMAN ANATOMY. By Joseph Leidy, M. D. Cloth, . . **$6.00**

FOR **$ 8.50**

REPORTER for one year, . . . **$5.00**
and any one of the following books—

1.—BYFORD'S DISEASES OF WOMEN. Cloth, ... **$5.00**

2.—FOWLER'S DICTIONARY OF PRACTICAL MEDICINE, ... **$5.00**

3.—JACOBSON'S OPERATIONS OF SURGERY, ... **$5.00**

4.—CAZEAUX & TARNIER'S MIDWIFERY. With Appendix by Munde, . **$5.00**

5.—THOMAS'S MEDICAL DICTIONARY, ... **$5.00**

These works are all in cloth binding, but can be supplied in leather binding for $1.00 additional.

FOR **$ 6.00**

we will send the **REPORTER** for one year, **$5.00**
and any two of the following books:

1.—THE NURSING AND CARE OF THE NERVOUS AND THE INSANE. By Chas. K. Mills, M. D., ... **$1.00**

2.—MATERNITY; INFANCY; CHILDHOOD. By John M. Keating, M. D., . . **$1.00**

3.—OUTLINES FOR THE MANAGEMENT OF DIET; or, The Regulation of Food to the Requirements of Health and the Treatment of Disease. By E. T. Bruen, M.D., . . **$1.00**

4.—FEVER NURSING. Designed for the use of professional and other Nurses. By J. C. Wilson, A. M., M. D., ... **$1.00**

5.—DISEASES AND INJURIES OF THE EAR: Their Prevention and Cure. By Chas. H. Burnett, A. M., M. D., ... **$1.00**

Or, **For $6.00,** any one of the above Nursing Books and **THOMSON'S (Sir Henry) SURGERY OF THE URINARY ORGANS.** Some important points connected with the Surgery of the Urinary Organs. Illustrated. Cloth, ... **$1.25**

TO SUBSCRIBERS.

SUBSCRIBERS WHO HAVE NOT yet sent payment for the current year will oblige the publisher by remitting soon. This leaf, or the lower half of it, may be *detached and forwarded* with money enclosed.

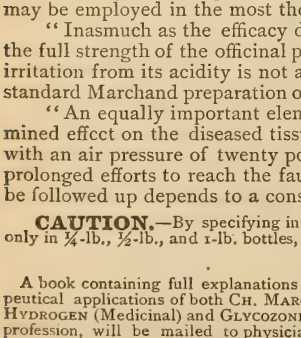
PLATT'S CHLORIDES

A liquid disinfectant, powerful, prompt and cheap.
A deodorizer, without odor or objectionable feature.
A germicide, at once active and thoroughly reliable.
An antiseptic of tried and proven efficiency.

Supplied in Quart Bottles only, by Druggists everywhere. Price, 50cts.

To any physician, who for any reason may be still unfamiliar with the practical value of Platt's Chlorides, a sample will be sent, by express, prepaid, on request. Address, giving both Post and Express offices,

HENRY B. PLATT,
36 PLATT STREET, NEW YORK.



CH. MARCHAND'S
PEROXIDE OF HYDROGEN
(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

Laboratory, 10 West Fourth Street, New York.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

The Atmospheric Tractor

SOME PRACTICAL POINTS ABOUT ITS USE.

In using the Atmospheric Tractor, it will be found that after the head has been properly flexed, its extraction will be facilitated more by continuous moderate traction for a number of seconds, than by exerting at once the greatest power possible.

It is well known that all sphincter muscles readily relax to gentle, continuous, persuasive pressure, but if abrupt great force be employed they contract spasmodically, and will often become ruptured or lacerated before relaxing.

Continuous pressure, of a trifling amount, will tire out the strongest muscles. A man may be able to pick up fifty pounds or more with one hand and hold it extended for a brief period, but he could not support a weight of five pounds in the same manner for many minutes. The muscles employed would become tired out and relax. In a similar manner, the pelvic muscles and the muscular tissue of the vagina may resist for hours the intermittent pressure of the head driven against them by the abdominal and uterine muscles, but they will become tired out and relax in a few minutes to a much less pressure exerted against them continuously through the medium of the Atmospheric Tractor.

It is not to be supposed that delivery will be completed invariably by one extractive effort. The extrusion of the head is a complex process which can be better accomplished in three moves than in one. The Tractor should, therefore, be detached when necessary, and reapplied in the desired position. If it becomes detached during traction, no alarm need be felt, as no injury has or can be done by its separation, and its reapplication only requiring a few seconds of time.

Flexion and rotation may be made at any time with the Atmospheric Tractor, but direct tractile efforts should not be made during the moment intervening between the relaxation of the abdominal muscles and the inward rush of air into the uterus. During this lightning-like interval our efforts should be directed only to hold the head in the position which it has gained until the column of air has rushed past it and broken up the uterine vacuum. At all other times, whether between pains or during their continuance, direct traction may be exerted with great and immediate relief.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our **COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., **NEW YORK.**

Carried in stock by the principal Wholesale Druggists in the U. S.

PHILADELPHIA.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well-known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, "Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEEF CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry.

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc. one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point

MANUFACTURED BY

JOHN WYETH & BROTHER,

PHILADELPHIA, PA.

Doctor:

Did you ever think of the extremely important part which the Hypophosphites of Lime and Soda play in the process of animal nutrition?

There is absolutely no complete life without them.

They enter into the composition of muscle, bone, cartilage, connective tissue, nerve tissue, and, in fact, every important tissue of the human body. Besides this, the soda salt takes the lactic acid, which is such a constant product of faulty assimilation, and breaks it up into carbonic acid gas and water, in which forms it is at once harmless and is readily discharged from the system.

When the entire system is in a healthy condition, with every organ working properly, and supplied with the proper variety of food, they are found in sufficient quantities at all times. But when the organs of digestion and assimilation get out of order, or foci of inflammation are established in various parts of the body, causing rapid destruction of tissue, they cannot then be supplied naturally in due proportion, and hence must be artificially supplied or the system suffers and the disease progresses to its fatal termination.

In McArthur's Syrup you will find the most agreeable and reliable means of artificially supplying these important elements.

It increases the appetite, giving tone and a feeling of buoyancy and vigor to the entire system. The flesh increases and becomes firm, the cheeks take on the hue of health, and the patient feels completely restored.

The diseases in which these results are produced are consumption and all Chronic Diseases of the Throat and Lungs, Scrofula, the various forms of Nervous and Mental Debility, and Perversions of Nutrition, as Fibroids, &c.

Send for a valuable treatise on "The Curability and Treatment of Consumption," and a sample bottle of McArthur's Syrup, free, if you will pay express charges.

McARTHUR HYPOPHOSPHITE CO.,

BOSTON, MASS.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

DR. MASSEY'S
PRIVATE SANITARIUM
212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. For particulars, address

DR. G. BETTON MASSEY,
Physician in Charge.

THE MECHANISM OF LABOR.

Air under varying degrees of pressure is an essential element in the mechanism of labor. The ascent of the fœtal head over the perineum, an almost vertical movement of four inches in opposition to gravity, and atmospheric and muscular resistance, is the result in great part of the outward expansion of the intra-uterine air when subjected to compression behind and above by muscular contraction. This hitherto unrecognized force is, however, potent for evil, as well as for good. Unconsidered or unrestrained it is practically the only cause of rupture of the perineum and even of rupture of the uterus itself.

The Atmospheric Tractor furnishes the means of controlling and utilizing this powerful force, thus enabling labor to be completed safely, and quickly, and painlessly.

PRICE, - $3.00.

Sent free to any address on receipt of this advertisement and $2.00.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* **a slowly but progressively active hypnotic.** *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* **time** *when the remedy should be administered; second, the* **method** *of administration; third, the* **dose.**"

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of **hot** *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be **certain** *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* **only** *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

W. H. Schieffelin & Co.,
170 & 172 William Street,
NEW YORK.

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

1/4 A MILD FERRUGINOUS PREPARATION CONTAINING 3% of METALLIC IRON

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

GREEK {Polus - much / Boskos - nourishing}

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC

Especially for Diabetics.

Supplies the waning energies of the young babe.

Stimulates and increases the health of the growing child.

Aids the weakest stomach and digestion.

Stimulates appetites in dyspepsia and convalescence from wasting diseases.

LAPACTIC PILLS, S.&D.'s.

(PILULÆ LAPACTICÆ.)

Aloin	1-4 gr.
Strychnine	1-60 gr.
Ext. Belladonna	1-8 gr.
Ipecac	1-16 gr.

An elegant and most efficient combination **introduced by us** and found in practice to possess superior advantages over similar formulæ for the relief of

HABITUAL CONSTIPATION, ATONIC DYSPEPSIA, BILIARY ENGORGEMENT AND MANY GASTRIC DISORDERS.

☞ **Since we introduced our Lapactic Pills**—some four years ago—a number of manufacturers have adopted the same formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term **"Lapactic Pills, S. & D.'s"** when prescribing these pills. **Dose: One to two pills when going to bed.**

PAN-PEPTIC TABLETS, S.&D.'s.

A TONIC DIGESTIVE.

Pure Pepsin	1 gr.
Pure Pancreatin	1 gr.
Pure Caffeine	¼ gr.
Acid Lacto-Phosphate of Calcium.	
Celery.	

The **Pepsin** and **Pancreatin** used in these tablets possess highest digestive power, and cannot fail to promptly start and accomplish

THE DIGESTION OF FOOD.

Whilst the **Caffeine,** by its stimulant tonic action on stomach and bowels, assists and quickens the normal digestion and assimilation of food, the **Acid Lacto-Phosphate of Calcium** contributes to the tonic action of the tablets, and aids to build up the general system, and a small quantity of that refreshing aromatic nerve stimulant, **Celery,** imparts a pleasant flavor and acts as an appetizer.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.

Dr. D. R. Patterson, in London *Lancet*, Oct. 26th, 1889.

Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.

Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.

Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.

Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.

Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.

British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.

Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.

Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.

Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa,

Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.

Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)

Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.

Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.

Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane. Jamestown, N. D.

Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.

Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.

Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

WALNUT LODGE HOSPITAL,

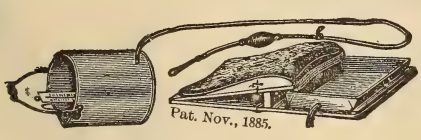
HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.



THE PERFECTION DOUCHE.

Compared with other kinds of receivers and bed pans the Perfection Douche provides the **most convenient apparatus extant, for the thorough and prolonged application of hot water** in the treatment of uterine and pelvic diseases. Prices, descriptive circulars and testimonials furnished on application. Address, "THE PERFECTION DOUCHE," Box 7, Albany, N. Y., or E. A. Yarnall Co., 1020 Walnut Street, Philadelphia.

PREVENTING CONSUMPTION.

That Consumption is a contagious disease may be disputed; but, that it is in a very great degree infectious must be admitted, as according to statistics gleaned by the most competent authorities "one-seventh of the people who die from tuberculosis acquire the disease from breathing the air tainted with contagion by a person already affected."

It follows, therefore, by way of prevention of the disease, the most practical results must be looked for in the prompt destruction or disinfection of the materials thrown off by the Consumptive. The sputa expectorations and nasal discharges are offensive, poisonous, and dangerous, and through them the dread disease is passed along.

The liberal use of a reliable inodorous and inexpensive disinfectant about the sick-room is always an aid toward recovery for the patient, and a blessing as well as a protection to the attendants and friends, and this is equally true in cases of Consumption and ailments tending that way.

The practical advice of an experienced and most successful physician in this relation we sum up as follows: "Give your patient every chance. Keep the room pleasant, the air sweet and pure. Always have a bottle of Platt's Chlorides handy in the room. Put a mixture of one quart chlorides to six or eight of water in the vessels before using, and keep a solution of this strength constantly in the cuspidor, or spittoon. This popular disinfectant has no smell, so your patient will not be annoyed; neither is it dangerous to use, as it contains no mercury.

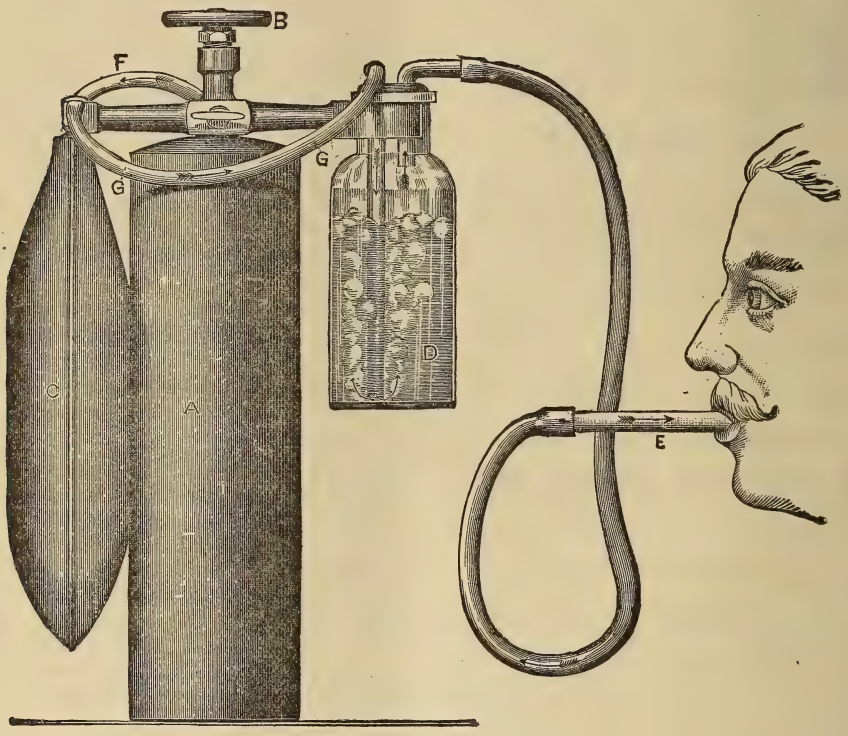
"Should the patient be confined to the bed relieve the atmosphere of the room by occasionally shaking a towel wet with a mixture of one part chlorides to ten of water, and then leave the moistened towel hanging to the gas-bracket or any convenient hook. It is astonishing how quickly and thoroughly the air is changed and sweetened by this simple process, and how gratefully the patient will appreciate it."

To use this disinfectant frequently and liberally costs but a little, as a quart bottle is supplied by the apothecary at 50 cents, and this quantity is sufficient to prepare two to three gallons of disinfecting liquid of ample strength for general household and sick-room purposes.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE BEST ANTISEPTIC
FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request.

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

THE TIMES, LONDON, 20th Sept., 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and he benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

Constipation.

Pavara Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle, (25 pills), 25 cents; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps,

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Suppositories

FOR THE TREATMENT OF

Hæmorrhoids or Piles.

Topliff's Suppositories supply what physicians and the public have long desired, namely, a *simple, effective,* and *perfectly harmless* remedy for hæmorrhoids or piles.

Physicians thoroughly approve of these Suppositories because they are so effective, and will not interfere in the slightest degree with any other medical treatment.

Price 50 cents per box, (24 Suppositories). Liberal discount to physicians. Two boxes will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

88 Maiden Lane, **New York City.**

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

E. E. MONTGOMERY, M. D.,
1818 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

ESTABLISHED 16 YEARS. BEWARE OF IMITATIONS.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE.

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, "**With Iron, No. 1**;" while the same preparation, **Without Iron,** is designated on the label as "**No. 2.**"

In prescribing this preparation, physicians should be particular to mention "*COLDEN'S*," viz., "*Ext. Carnis Fl. Comp. (Colden).*" A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. *Sold by druggists generally.*

C. N. CRITTENTON, General Agent, 115 Fulton St., New York.

GLENN'S SULPHUR SOAP.

BEWARE OF COUNTERFEITS.

Physicians know the great value of the local use of Sulphur in the **Treatment of Diseases of the Skin.**

Constantine's Pine-Tar Soap.

THE BEST SOAP MADE.

Has been on trial among physicians for very many years as a healing agent. **By far the Best Tar Soap made.**

Wholesale Depot, C. N. CRITTENTON, 115 Fulton St, New York.

Samples of above Soaps SENT FREE, on application, to any Physician enclosing card.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

CHICAGO METRIC GRANULE CO.,

whose granules and other preparations have won a high reputation for their uniformity and excellence.

Price-lists and other information furnished on application.

CH. MARCHAND'S
PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . 1 gr.
Ferri Valerianat, . . . 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"Editor Medical Brief, St. Louis, Mo.:

"The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(M. ft. pil. No. 20. Sig. One, three times a day.)

"The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.

"Please try them and report. Your success will be sure.

"S. A. DE FOE, M. D.,
"Washington, N. J."

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis. Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico Chirurgical College of Philadelphia, Pa,
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane. Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

Lehn & Fink, IMPORTERS OF DRUGS AND NEW REMEDIES. **New York.**

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

A BRIEF SUMMARY
OF
HYPODERMIC MEDICATION.

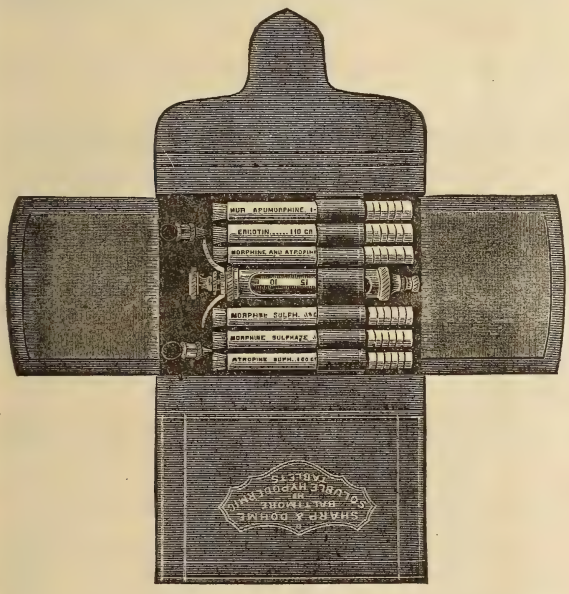
will be sent, with our compliments, when application is made and the name of this journal is mentioned. It quotes Profs. Dujardin-Beaumetz, Bartholow, Anstie, Erb, Echeverria, Mays and others. It contains important and the most recent suggestions on the technique of hypodermic medication, and gives the composition, properties, doses, etc., of our

SOLUBLE HYPODERMIC TABLETS, S. & D.'s.

which are quickly and perfectly soluble in cold or warm water, combining accuracy of dose with perfect preservation of the active ingredient, and the base of which is perfectly harmless and unobjectionable. They will cause no abscesses and will not become insoluble by age. They may also be administered by the mouth, and are

ALWAYS READY FOR INSTANT USE.

We respectfully solicit a trial of these tablets, and will mail samples of them free to readers of this journal.



That the several objections to hypodermic medication might be obviated, we have had manufactured expressly for us a line of

HYPODERMIC SYRINGES, S. & D.'s.,

which have all the latest improvements, are most accurately made of the best materials and so constructed as to allow the

MAKING OF A SOLUTION IN THE SYRINGE.

They are sent to any address at the following prices:

Syringe, in leathered-covered case, two tubes of tablets	net, $2.50
" " metal case, latest improved style, two tubes of tablets	" 2.50
" " " " four tubes of tablets	" 3.50
" " flexible leather case, as shown by cut	3.50

SHARP & DOHME,

MANUFACTURERS OF

STANDARD MEDICINAL FLUID AND SOLID EXTRACTS; SOLUBLE HYPODERMIC TABLETS; SOLUBLE GELATIN AND SUGAR-COATED PILLS AND GRANULES; GRANULAR EFFERVESCENT SALTS; COMPRESSED LOZENGES AND TABLETS; FINE CHEMICALS, &C., &C.

ESTABLISHED 1860. 3 **BALTIMORE, MD.**

REED & CARNRICK WILL NEVER ADD ANY NEW PREPARATIONS TO THEIR LIST UNLESS THEY POSSESS IMPORTANT POINTS OF SUPERIORITY OVER THOSE IN USE BY THE MEDICAL PROFESSION FOR SIMILAR PURPOSES.

WE ARE CONFIDENT that the following preparations for the purposes described are superior to any therapeutic agents known to the Medical Profession, or are presented in more elegant form for administration. We will forward a sample to any Physician without charge. This offer holds good for one order only.

ZYMOCIDE (ANTISEPSINE.) — For **Leucorrhœa, Catarrh** of the nasal organs, stomach or bladder, and **all diseases** of the **mucous Surfaces,** or whenever a non-toxic, antiseptic and detergent preparation is required.

PANCROBILIN — For **Intestinal Indigestion, Constipation** and to **increase fatty tissue.** The price of Pancrobilin has been reduced 33 per cent.

CORDIAL ANALEPTINE — For **Rheumatic and Gouty Diathesis** and **excessive Urates.**

CORRIGENT PILLS — For **imparting tone to the sytem, increasing** the **appetite, improving** the **digestion, enhancing** the **functions** of **assimilation** and **blood-making** and removing **malarial** and other **taint** from the blood.

SULPHO-CALCINE — For **dissolving** the **diphtheritic membrane** and for treating diseases of the mucous surfaces. Valuable in parasitic skin diseases.

LACTO-PREPARATA — For the **Feeding** of **Infants** from **birth** to **six months** of age. The only **All-Milk Food prepared** for Infants.

CARNRICK'S FOOD — For **Children** from **six months** to **fifteen months** of age.

SULPHUR-TARTRATE TABLETS — For **Biliousness, Torpid Liver, Skin Diseases, Pimples** and **Imperfect growth** of the **nails** and **hair.**

COD LIVER OIL AND MILK — For all purposes where **Cod Liver Oil** is indicated. **The most palatable and digestible preparation in the market.**

VELVET-SKIN SOAP — For making the skin soft. It is a **perfect Soap** for **Infants** and all **Toilet Purposes.** It is made only from Vegetable Oils.

VELVET-SKIN POWDER — For **Infants** and **all Toilet Purposes.** It excels all others in **delicacy** and **fragrance.** Contains no starch or deleterious substances.

Send for pamphlet giving minute formulas and full description of each preparation.

REED & CARNRICK,

P. O. Box 3042, NEW YORK.

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% of Metallic Iron.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

GREEK { Polus - much / Boskos - nourishing

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS & INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC

Especially for Diabetics.

Supplies the waning energies of the young babe.

Stimulates and increases the health of the growing child.

Aids the weakest stomach and digestion.

Stimulates appetites in dyspepsia and convalescence from wasting diseases.

MANUFACTURED ONLY BY THE CRYSTAL SPRINGS MFG. CO. 86 State St., Boston, Mass.

EISNER AND MENDELSON CO., 6 Barclay St., New York.

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.

THE BEST ANTISEPTIC

FOR BOTH INTERNAL AND EXTERNAL USE.

ANTISEPTIC, PROPHYLACTIC, DEODORANT.

LISTERINE

NON-TOXIC. NON-IRRITANT. NON-ESCHAROTIC.

FORMULA—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE—Internally: One teaspoonful three or more times a day (as indicated) either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an antizymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Diseases of the Uric Acid Diathesis.

LAMBERT'S

LITHIATED HYDRANGEA

KIDNEY ALTERATIVE—ANTI-LITHIC.

FORMULA—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

DOSE—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical irritations generally.

We have much valuable literature upon { GENERAL ANTISEPTIC TREATMENT, LITHEMIA, DIABETES, CYSTITIS, ETC. } To forward to Physicians upon request:

LAMBERT PHARMACAL CO., ST. LOUIS, MO.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

PHILADELPHIA.

Physical Exhaustion

HORSFORD'S ACID PHOSPHATE.

It is a well-known physiological fact that the phosphates are involved in all waste and repair, and are consumed with every effort. The quantity secreted by the kidneys is increased by labor of the muscles.

In the healthy organization the phosphate of lime exists in the muscles and bones. This phosphate is supplied by this preparation in such form as to be readily assimilated.

Dr. J. P. COWLES, Camden, Me., says: "I have used it in cases of physical debility arising from exhaustive habits or labors, with beneficial results."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{600}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

I. O. WOODRUFF & CO.,

MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

88 Maiden Lane, New York City.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

☞ DOGS NOT TAKEN.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anæmia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them.

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BLAUD

CH. MARCHAND'S
PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT, AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "Ch. Marchand's Peroxide of Hydrogen (Medicinal)," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

Charles Marchand

Laboratory, 10 West Fourth Street, New York.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

HOME FOR HABITUÉS.

OPIUM, CHLORAL, COCAINE.

DR. J. B. MATTISON,

Continues to receive at his residence, 314 State Street, Brooklyn, N. Y., a limited number of these habitués, to whom he devotes his *exclusive* professional attention. Patients Six. and Select. Attractive apartments, liberal cuisine, desirable privacy, cheerful society, and *personal* professional attention, based on several years' experience in the treatment of this disease. Details on application.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russ an, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

DR. MASSEY'S

PRIVATE SANITARIUM

212 South Fifteenth Street

PHILADELPHIA

This institution, in addition to complete arrangements for the treatment of Nervous Diseases by rest, electricity, massage, etc., under comfortable surroundings, is specially equipped for the treatment of cases of Fibroid Tumors and other intractable diseases of the pelvic viscera, by the conservative use of strong electric currents. Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

E. E. MONTGOMERY, M. D.,
1818 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,
226 East 20th St., New York City.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co 's. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen ; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

Carried in stock by the principal Wholesale Druggists in the U. S.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

GOLD MEDAL, PARIS, 1878.

W. BAKER & Co.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known.
It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED
IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, "Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

The Missouri Pacific R'y Co.,

LEASED AND OPERATED LINES.

S. W. JENKINS, *Dep't Purveyor, St. Louis, Mo.*

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEER CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

Doctor:

Did you ever think of the extremely important part which the Hypophosphites of Lime and Soda play in the process of animal nutrition?

There is absolutely no complete life without them.

They enter into the composition of muscle, bone, cartilage, connective tissue, nerve tissue, and, in fact, every important tissue of the human body. Besides this, the soda salt takes the lactic acid, which is such a constant product of faulty assimilation, and breaks it up into carbonic acid gas and water, in which forms it is at once harmless and is readily discharged from the system.

When the entire system is in a healthy condition, with every organ working properly, and supplied with the proper variety of food, they are found in sufficient quantities at all times. But when the organs of digestion and assimilation get out of order, or foci of inflammation are established in various parts of the body, causing rapid destruction of tissue, they cannot then be supplied naturally in due proportion, and hence must be artificially supplied or the system suffers and the disease progresses to its fatal termination.

In McArthur's Syrup you will find the most agreeable and reliable means of artificially supplying these important elements.

It increases the appetite, giving tone and a feeling of buoyancy and vigor to the entire system. The flesh increases and becomes firm, the cheeks take on the hue of health, and the patient feels completely restored.

The diseases in which these results are produced are consumption and all Chronic Diseases of the Throat and Lungs, Scrofula, the various forms of Nervous and Mental Debility, and Perversions of Nutrition, as Fibroids, &c.

Send for a valuable treatise on "The Curability and Treatment of Consumption," and a sample bottle of McArthur's Syrup, free, if you will pay express charges.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa.
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College, Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians, etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. HALE WHITE (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

DR. JOHN AULDE suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% OF METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste. It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

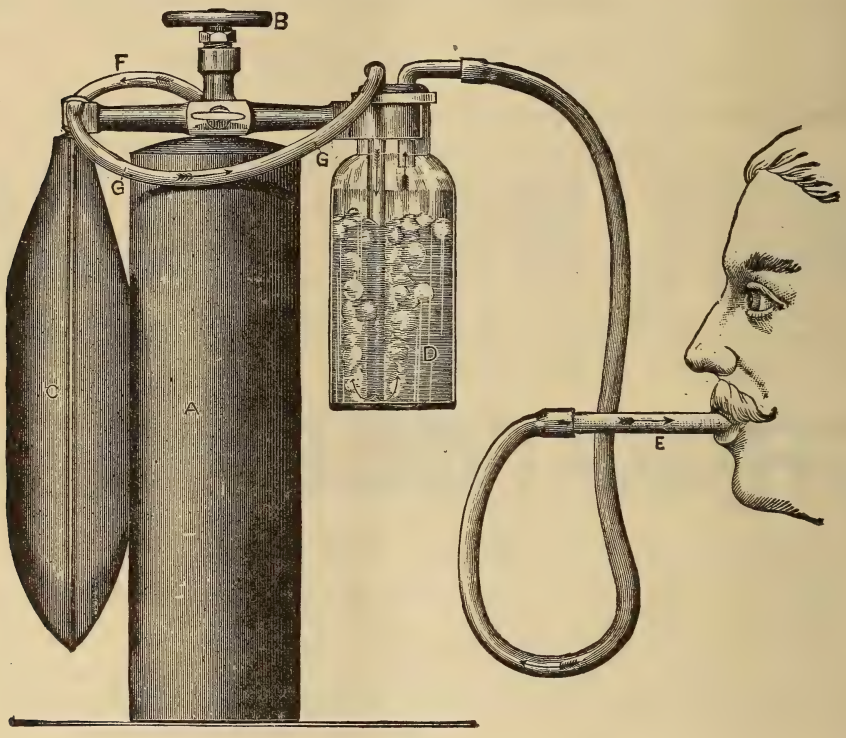
INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

THE PERFECTION DOUCHE.

Compared with other kinds of receivers and bed pans the Perfection Douche provides the **most convenient apparatus extant, for the thorough and prolonged application of hot water** in the treatment of uterine and pelvic diseases. Prices, descriptive circulars and testimonials furnished on application. Address, "THE PERFECTION DOUCHE," Box 7, Albany, N. Y., or E. A. Yarnall Co., 1020 Walnut Street, Philadelphia.

PREVENTING CONSUMPTION.

That Consumption is a contagious disease may be disputed; but, that it is in a very great degree infectious must be admitted, as according to statistics gleaned by the most competent authorities "one-seventh of the people who die from tuberculosis acquire the disease from breathing the air tainted with contagion by a person already affected."

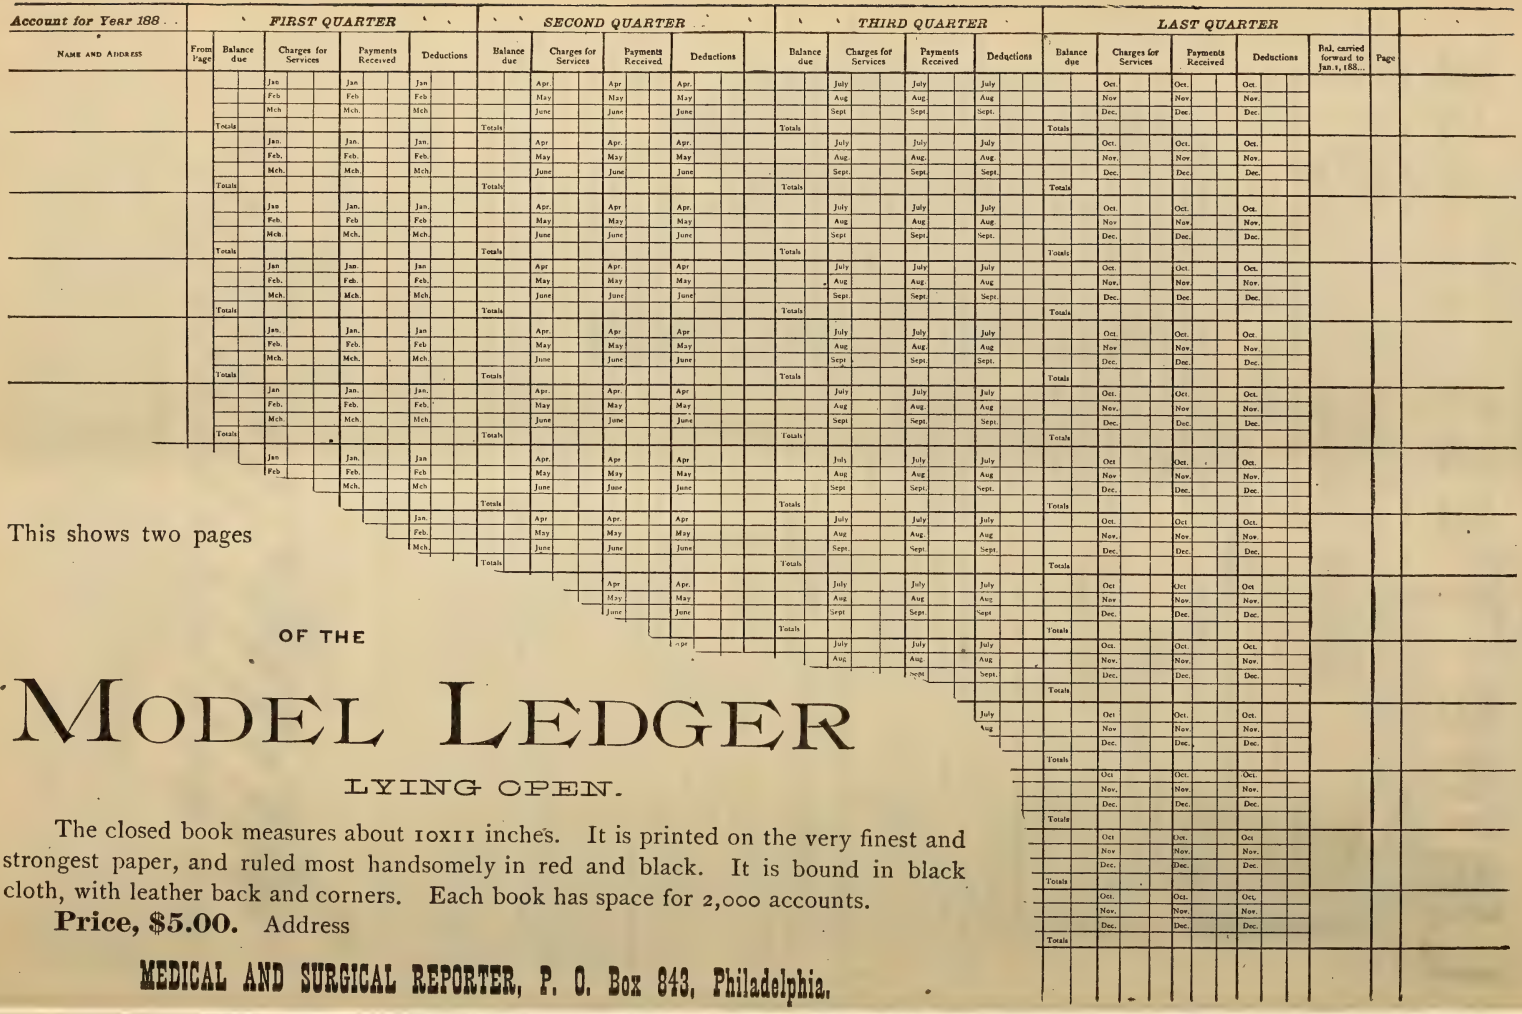
It follows, therefore, by way of prevention of the disease, the most practical results must be looked for in the prompt destruction or disinfection of the materials thrown off by the Consumptive. The sputa expectorations and nasal discharges are offensive, poisonous, and dangerous, and through them the dread disease is passed along.

The liberal use of a reliable inodorous and inexpensive disinfectant about the sick-room is always an aid toward recovery for the patient, and a blessing as well as a protection to the attendants and friends, and this is equally true in cases of Consumption and ailments tending that way.

The practical advice of an experienced and most successful physician in this relation we sum up as follows: "Give your patient every chance. Keep the room pleasant, the air sweet and pure. Always have a bottle of Platt's Chlorides handy in the room. Put a mixture of one quart chlorides to six or eight of water in the vessels before using, and keep a solution of this strength constantly in the cuspidor, or spittoon. This popular disinfectant has no smell, so your patient will not be annoyed; neither is it dangerous to use, as it contains no mercury.

"Should the patient be confined to the bed relieve the atmosphere of the room by occasionally shaking a towel wet with a mixture of one part chlorides to ten of water, and then leave the moistened towel hanging to the gas-bracket or any convenient hook. It is astonishing how quickly and thoroughly the air is changed and sweetened by this simple process, and how gratefully the patient will appreciate it."

To use this disinfectant frequently and liberally costs but a little, as a quart bottle is supplied by the apothecary at 50 cents, and this quantity is sufficient to prepare two to three gallons of disinfecting liquid of ample strength for general household and sick-room purposes.



This shows two pages

OF THE

MODEL LEDGER

LYING OPEN.

The closed book measures about 10x11 inches. It is printed on the very finest and strongest paper, and ruled most handsomely in red and black. It is bound in black cloth, with leather back and corners. Each book has space for 2,000 accounts.

Price, $5.00. Address

THE MECHANISM OF LABOR.

Air under varying degrees of pressure is an essential element in the mechanism of labor. The ascent of the fœtal head over the perineum, an almost vertical movement of four inches in opposition to gravity, and atmospheric and muscular re-istance, is the result in great part of the outward expansion of the intra-uterine air when subjected to compression behind and above by muscular contraction. This hitherto unrecognized force is, however, potent for evil, as well as for good. Unconsidered or unrestrained it is practically the only cause of rupture of the perineum and even of rupture of the uterus itself.

The Atmospheric Tractor furnishes the means of controlling and utilizing this powerful force, thus enabling labor to be completed safely, and quickly, and painlessly.

PRICE, - $3.00.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Constipation.

Pavara Pills are prepared especially for the treatment of Constipation. They are tasteless, harmless, and *produce natural movements of the bowels, without pain, nausea, or any inconvenience whatever.*

Physicians are requested to test these pills in those cases which they think to be incurable, also, in cases of **constipation during pregnancy.** Thousands of physicians now use and prescribe them.

Physicians will see by the **formula** (on the outside label) that each medicinal ingredient is **absolutely harmless.**

Prices: small bottle, (25 pills), 25 cents; large, (150 pills), $1.00. Liberal discount to physicians.

A large bottle will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps,

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

Suppositories

FOR THE TREATMENT OF

Hæmorrhoids or Piles.

Topliff's Suppositories supply what physicians and the public have long desired, namely, a *simple, effective,* and *perfectly harmless* remedy for hæmorrhoids or piles.

Physicians thoroughly approve of these Suppositories because they are so effective, and will not interfere in the slightest degree with any other medical treatment.

Price 50 cents per box, (24 Suppositories). Liberal discount to physicians. Two boxes will be mailed to **any physician,** for trial, on receipt of 25 cents in postage stamps.

Prepared by C. L. TOPLIFF, New York. Depot, 115 Fulton Street.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to

PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WINDSOR HOTEL,

(FRONTING EAST ON WINDSOR PARK.)

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology, is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

E. E. MONTGOMERY, M. D.,
1818 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,
226 East 20th St., New York City.

D. B. ST. JOHN ROOSA, M. D., LL.D., PRESIDENT.
F. E. FARRELL, SUPERINTENDENT.

COLLEGE OF MEDICINE. SYRACUSE UNIVERSITY.

FACULTY.

JOHN VAN DUYN, M. D., Surgery.
HENRY D. DIDAMA, M. D., Practice and Clinical Medicine.
WILLIAM T. PLANT, M. D., Diseases of Children.
ALFRED MERCER, M. D., State Medicine.
WILLIAM MANLIUS SMITH, M. D., Chemistry.
DAVID M. TOTMAN, M. D., Clinical Surgery,
NATHAN JACOBSON, M. D., Clinical Surgery and Laryngology.
GAYLORD P. CLARK, M. D., Anatomy.
WILLIAM H. DUNLAP, M. D., Dermatology.
JOHN L. HEFFRON, M. D., Materia Medica and Therapeutics.
HENRY B. ALLEN, M. D., Obstetrics.
A. CLIFFORD MERCER, M. D., Pathology.
HENRY L. ELSNER, M. D., Clinical Medicine.
FRANK W. MARLOW, M. D., Ophthalmology.

Three Years' Graded Course. Year begins October 7th, 1890, ends in June, 1891.

FIRST YEAR: Anatomy, Physiology, Chemistry, Histology, Materia Medica.
SECOND YEAR: Anatomy, Physiology, Chemistry, Therapeutics, Pathology, Practice, Surgery, Clinical Medicine and Surgery.
THIRD YEAR: Therapeutics, Practice, Surgery, Children, Clinics, Obstetrics, Gynæcology, Forensic Medicine, Ophthalmology, Hygiene.

An experience of seventeen years has demonstrated that a three years' graded course is superior in every respect to an ungraded, unnatural, and cramming course of two winters.

Tuition, $80.00 for each Year. Perpetual Ticket, $200.00. Diploma, $25.00.

For circulars with full information, address

W. H. DUNLAP, M. D., Registrar, SYRACUSE, N. Y.

UNIVERSITY OF PENNSYLVANIA.—Medical Department.

The 125TH ANNUAL WINTER SESSION will begin Wednesday, October 1st, 1890, at 12 M., and will continue seven months. The PRELIMINARY SESSION begins September 22d, 1890, the Spring Term early in May, 1891.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology, with Bedside Instruction in Medicine, Surgery and Gynecology are a part of the regular course and without additional expense.

FACULTY.

JOSEPH LEIDY, M.D., LL.D., Professor of Anatomy.
D. HAYES AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT, M.D., Professor of Physiology.
WILLIAM F. NORRIS, M.D., Honorary Prof. of Ophthalmology
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Clinical Surgery.
JOHN GUITÉRAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Histology and Embryology.
SAMUEL G. DIXON, M.D., Professor of Hygiene.

PHILADELPHIA POLYCLINIC

THE PHILADELPHIA POLYCLINIC

HAS MOVED TO

EIGHTEENTH AND LOMBARD STREETS,

AND OCCUPIED ITS

NEW COLLEGE AND HOSPITAL BUILDING

The Finest Structure of the kind in America.

Practical instruction in all branches of medicine, utilizing its own rich out-patient service, its indoor accommodation of 50 beds, and the best facilities of the other hospitals of Philadelphia. Six weeks' courses may begin at any time.

☞ Write for announcement and full particulars.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)		Soda.....1-3 Grains.	
Distilled Water.....35 "		Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.		Hyocholic Acid.....1-20 "	

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

METRIC GRANULES

We desire to announce to the profession that we are the sole agents for Philadelphia of the

CHICAGO METRIC GRANULE CO.,

whose granules and other preparations have won a high reputation for their uniformity and excellence.

Price-lists and other information furnished on application.

JOHN OGDEN & CO.,

PHILADELPHIA.

Maltine

WITH

Cascara Sagrada

Peristalsis Re-established and Permanently Maintained.

Rendered Palatable by Combining the "Bitter with the Sweet."

It is Especially Indicated in Constipation of Pregnancy.

No Griping; No Nausea; nor any Distressing Re-action.

The System Nourished by Tonic Properties of Maltine.

The Ideal Laxative for Children.

Maltine

MALTINE, the base of this Preparation, is a Powerful Reconstructive, while the base of "Syrups of Hypophosphites," being a Solution of Cane Sugar, is inert.

By the Diastasic Action of Maltine, the Farinaceous Foods are converted into Soluble Form, General Digestion is Stimulated, and the Salts of Lime, Soda and Iron are readily assimilated.

Maltine

WITH

Hypophosphites

Upon application we will send to any physician, who will pay express charges, a case containing an eight ounce bottle of each of the above preparations; also, descriptive card of MALTINE and its eight compounds with their formulæ.

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . 1 gr.
Ferri Valerianat, . . . 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"*Editor Medical Brief, St. Louis, Mo.:*

"*The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.*

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(*M. ft. pil. No. 20. Sig. One, three times a day.*)

"*The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.*

"*Please try them and report. Your success will be sure.*

"*S. A. DE FOE, M. D.,*
"*Washington, N. J.*"

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa,
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

JOHN C. BAKER & CO'S
STANDARD PREPARATIONS.

Baker's Pure Norwegian Cod Liver Oil.
Established 1830.
Put up in our capsuled, bottles with steel engraved label. Will always be found of unequalled quality, and sure to yield the most satisfactory results.

OFFICE AND LABORATORY.
815 FILBERT STREET,
PHILADELPHIA.

Baker's Cod Liver Oil and Malt Extract.
SOLUTION FERROUS MALATE,
SOLUTION SALICYLATE IRON,

BAKER'S EMULSION.
C. L. Oil with Hypo-phosphites. Made with our unequalled Norwegian Oil, rendering it by common consent the Best Emulsion in the market.

LAPACTIC PILLS, S.&D.'s.

(PILULÆ LAPACTICÆ.)

Aloin	1-4 gr.
Strychnine	1-60 gr.
Ext. Belladonna	1-8 gr.
Ipecac	1-16 gr.

An elegant and most efficient combination **introduced by us** and found in practice to possess superior advantages over similar formulæ for the relief of

HABITUAL CONSTIPATION, ATONIC DYSPEPSIA, BILIARY ENGORGEMENT AND MANY GASTRIC DISORDERS.

☞ **Since we introduced our Lapactic Pills**—some four years ago—a number of manufacturers have adopted the same formula and have furnished these pills under the same name. Should Physicians fail to obtain satisfactory results from Lapactic Pills not of our make (and we have received a large number of such complaints), we shall be glad to furnish a sample of our Lapactic Pills on application. We feel confident that they will fully substantiate our claims.

Please use the term **"Lapactic Pills, S. & D.'s"** when prescribing these pills. **Dose: One to two pills when going to bed.**

PAN-PEPTIC TABLETS, S.&D.'s.

A TONIC DIGESTIVE.

Pure Pepsin	1 gr.
Pure Pancreatin	1 gr.
Pure Caffeine	¼ gr.
Acid Lacto-Phosphate of Calcium.	
Celery.	

The **Pepsin** and **Pancreatin** used in these tablets possess highest digestive power, and cannot fail to promptly start and accomplish

THE DIGESTION OF FOOD.

Whilst the **Caffeine,** by its stimulant tonic action on stomach and bowels, assists and quickens the normal digestion and assimilation of food, the **Acid Lacto-Phosphate of Calcium** contributes to the tonic action of the tablets, and aids to build up the general system, and a small quantity of that refreshing aromatic nerve stimulant, **Celery,** imparts a pleasant flavor and acts as an appetizer.

☞ *SAMPLE SENT TO PHYSICIANS WHO MENTION THIS JOURNAL.* ☜

ESTABLISHED 1860. 2 **BALTIMORE, MD.**

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free by addressing

HENRY B. PLATT,

36 PLATT STREET, NEW YORK.

Physicians desiring this sample will kindly give express as well as P. O. address, as the bottle sent is too large for the mail.

GOLD MEDAL, PARIS, 1878.

W. BAKER & Co.'s Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y.

To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

HOME FOR HABITUES.

OPIUM, CHLORAL, COCAINE.

DR. J. B. MATTISON.

Continues to receive at his residence, 314 State Street, Brooklyn, N. Y., a limited number of these habitues, to whom he devotes his *exclusive* professional attention. Patients Six, and Select. Attractive apartments, liberally cuisine, desirable privacy, cheerful society, and *personal* professional attention, based on several years' experience in the treatment of this disease. Details on application.

WALNUT LODGE HOSPITAL,

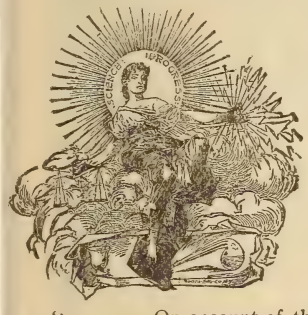
HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.



CH. MARCHAND'S PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS.

Laboratory, 10 West Fourth Street, New York.

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% OF METALLIC IRON

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

WILLIAM R. WARNER & CO.'S

PIL. CHALYBEATE COMP.

IN THE TREATMENT OF

LA GRIPPE.

FORMULA:—Carb. Protoxide of Iron, gr. ijss.
Ext. Nux. Vom., ... gr. ⅛

ADVANTAGES:—Does not constipate, is easily absorbed, is nerve tonic and quickly soluble.

The effects left by La Grippe are marked Physical Prostration for which Pill Chalybeate Comp. (Warner & Co.'s) is almost a specific. The assimilable iron, acting as a blood tonic and the Nux Vomica as a stimulant to the spinal cord.

Dose, begin with one pill every four hours and increase to two pills three times a day.

The acute symptoms of La Grippe are controlled by (**EFF. ANTALGIC SALINE**), one dessert spoonful of which contains 4 grains Antipyrine and 4 grains Salicylate Soda. Physicians will not be disappointed in the treatment of La Grippe by trying this salt followed by PILL. CHALYBEATE COMP. as above mentioned.

WILLIAM R. WARNER & CO.,

1228 MARKET STREET, PHILADELPHIA. 18 LIBERTY STREET, NEW YORK.

"Familiar in millions of mouths as any household word."—*The Times.*

Apollinaris

"THE QUEEN OF TABLE WATERS."

"In 1873 the number of bottles filled and exported was a little under 2,000,000. Last year the number was nearly 16,000,000.

"Filling went on at the rate of 90,000 a day.

"These figures are gigantic."

THE TIMES, LONDON, 20th Sept., 1890.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

AUT NUTRIMENTUM AUT NULLUM.

AS THE importance of nutrition in the treatment of disease is being more clearly recognized, and the science of dietetics has come to occupy a position quite as conspicuous as that of therapeutics, it is with special pleasure that we are able to bring to the attention of the Medical Profession Mosquera's Beef-Meal and Beef-Cacao.

THE peculiar features of the merit possessed by these products may be epitomized as follows:

THEY are absolutely representative of fresh beef, containing all its constituents, soluble and insoluble.

NEARLY fifty per cent. of the substance of Beef-Meal is predigested and ready for immediate assimilation.

THEY are perfectly palatable, and may be administered in a variety of forms, thus avoiding monotony in diet.

THEY are absolutely permanent, and are not subject to the attack of insects, nor will they putrify under the most trying conditions.

Send for full descriptive literature and samples. They will interest you.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & CO.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

Carried in stock by the principal Wholesale Druggists in the U. S.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

TO NEW SUBSCRIBERS.

The publishers of the REPORTER wishing to give new Subscribers every opportunity of testing the merits of the journal before becoming permanent subscribers, will send it to any one caring to give it a trial, for **THREE MONTHS** upon the receipt of **ONE DOLLAR.**

We wish the journal to stand on its own merits, and therefore make this reduction.

Address:

SUBSCRIPTION DEPARTMENT,

Surgical & Medical Reporter,

P. O. Box 843, Philadelphia.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,
226 East 20th St., New York City.

WILLIAM H. DUNLAP, M. D., Dermatology.
JOHN L. HEFFRON, M. D., Materia Medica and Therapeutics.
HENRY B. ALLEN, M. D., Obstetrics.
A. CLIFFORD MERCER, M. D., Pathology.
HENRY L. ELSNER, M. D., Clinical Medicine.
FRANK W. MARLOW, M. D., Ophthalmology.

Three Years' Graded Course. Year begins October 7th, 1890, ends in June, 1891.

FIRST YEAR: Anatomy, Physiology, Chemistry, Histology, Materia Medica.
SECOND YEAR: Anatomy, Physiology, Chemistry, Therapeutics, Pathology, Practice, Surgery, Clinical Medicine and Surgery.
THIRD YEAR: Therapeutics, Practice, Surgery, Children, Clinics, Obstetrics, Gynæcology, Forensic Medicine, Ophthalmology, Hygiene.

An experience of seventeen years has demonstrated that a three years' graded course is superior in every respect to an ungraded, unnatural, and cramming course of two winters.

Tuition, $80.00 for each Year. Perpetual Ticket, $200.00. Diploma, $25.00.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

PHILADELPHIA.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Do not fail to read our Proposition at the bottom of page.*

THE MOST PERFECT ARTIFICAL INFANT FOOD.

It goes without saying that a child, to be perfectly nourished, should be fed on healthy human milk, or its equivalent, during the nursing period, or at least until seven months of ago. If a child under seven months of age **MUST** be **ARTIFICALLY NOURISHED,**

LACTO-PREPARATA

is the only Food which meets every requirement, as it is the only perfect **ARTIFICIAL HUMAN MILK** ever produced; when dissolved in luke-warm water it practically resembles human milk in *composition, character,* and *taste.*

It is made from pure cow's milk, contains no cereals in any form, and is treated according to the directions of **PROF. ATTFIELD FOR STERILIZING MILK.**

LACTO-PREPARATA and **CARNRICK'S FOOD** are not put up in air-tight cans **ONLY** and will keep perfectly.

CARNICK'S FOOD

is composed of two-thirds of **LACTO-PREPARATA,** and one-third of dextrinized wheat, and is more especially intended for children from seven months to two years of age.

A PROPOSITION TO ANY PHYSICIAN.

* The flesh of all children fed ***alone*** on ***LACTO-PREPARATA*** or ***CARNRICK'S FOOD*** is ***firm*** and ***solid,*** because they contain the requisite amount of ***albuminoid constituents.***

The flesh of all children fed alone on any other Milk Foods (containing as they do 90 to 94 per cent. of cereals), is soft and flabby, because they do not contain sufficient nitrogenous elements, and the children thus nourished will in consequence quickly collapse when attacked with any serious complaint.

We respectfully request Physicians who are prescribing these Foods to examine the flesh of the Infants and verify our statements.

We are so confident that our Foods are practically perfect as substitutes for healthy human milk that we will furnish gratis to any Physician who is now prescribing other Foods or cow's milk, sufficient of our preparations to enable him to judge of their dietetic value in perfect nourishing qualities, as compared with other foods for similar purposes.

REED & CARNRICK, MANUFACTURING CHEMISTS,
NEW YORK.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known.
It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED

IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well-known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, "Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

The Missouri Pacific R'y Co.,

LEASED AND OPERATED LINES.

HOSPITAL DEPARTMENT.

R. C. VOLKER, *Ass't Chief Surgeon, Ft. Worth, Tex.*
S. W. JENKINS, *Dep't Purveyor, St. Louis, Mo.*

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEEF CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc. one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point

MANUFACTURED BY

JOHN WYETH & BROTHER,

PHILADELPHIA, PA.

Doctor:

We wish to speak to you of one indication for the use of the Hypophosphites of Lime and Soda, which is most often overlooked.

There is a certain perversion of the process of nutrition, characterized by a hyperplasia of certain tissues, causing a pathological growth of those tissues.

Such an example is seen in Fibroid Tumors.

A careful histo-chemical examination of these cases shows that there is always a lack of the proper proportion of these important tissue salts.

Chemical experience demonstrates that their introduction, chemically pure, in a finely divided form, rapidly checks the pathological process.

These valuable salts will be found to control most other perversions of nutrition, as Consumption of the Lungs, Tabes Mesenterica, Chronic Inflammation of the respiratory passages, Scrofula and all its manifestations, Degenerations of the Nervous System, Muscular Atrophy, &c.

The one great desideratum is to obtain these inorganic salts in their absolute chemical purity, and in a pleasant and convenient vehicle. These requirements are all met in McArthur's Syrup, consisting of the pure Hypophosphites of Lime and Soda, especially prepared and thoroughly dissolved.

There are no other medicinal agents in the preparation, as will be found in others making similar claims, as these two salts form a distinct therapeutic unit, all the irritating stimulants being foreign to it.

If special cases temporarily require other medication, you can add the required ingredients to the Syrup in your prescription.

Write your prescription thus:

Syr. Hypophos. Comp., C. P. McArthur.

If you are interested we will send you, free, our valuable treatise, "The Curability and Treatment of Consumption;" also a large bottle of the Syrup, if you will pay express charges.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians, etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. HALE WHITE (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

DR. JOHN AULDE suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

A BRIEF SUMMARY

OF

HYPODERMIC MEDICATION.

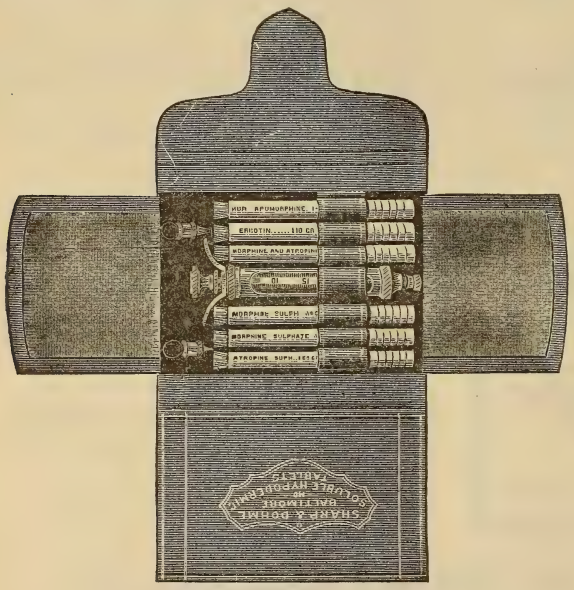
will be sent, with our compliments, when application is made and the name of this journal is mentioned. It quotes Profs. Dujardin-Beaumetz, Bartholow. Anstie, Erb, Echeverria, Mays and others. It contains important and the most recent suggestions on the technique of hypodermic medication, and gives the composition, properties, doses, etc., of our

SOLUBLE HYPODERMIC TABLETS, S. & D.'s.

which are quickly and perfectly soluble in cold or warm water, combining accuracy of dose with perfect preservation of the active ingredient, and the base of which is perfectly harmless and unobjectionable. They will cause no abscesses and will not become insoluble by age. They may also be administered by the mouth, and are

ALWAYS READY FOR INSTANT USE.

We respectfully solicit a trial of these tablets, and will mail samples of them free to readers of this journal.



That the several objections to hypodermic medication might be obviated, we have had manufactured expressly for us a line of

HYPODERMIC SYRINGES, S. & D.'s.,

which have all the latest improvements, are most accurately made of the best materials and so constructed as to allow the

MAKING OF A SOLUTION IN THE SYRINGE.

They are sent to any address at the following prices:

Syringe, in leathered-covered case, two tubes of tablets	net,	$2.50
" " metal case, latest improved style, two tubes of tablets	"	2.50
" " " " four tubes of tablets	"	3.50
" " flexible leather case, as shown by cut		3.50

ESTABLISHED 1860. BALTIMORE, MD.

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free by addressing

HENRY B. PLATT,

36 PLATT STREET, NEW YORK.

Physicians desiring this sample will kindly give express as well as P. O. address, as the bottle sent is too large for the mail.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.
Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

C. N. CRITTENTON, Gen'l Agent, 115 Fulton St., N. Y.

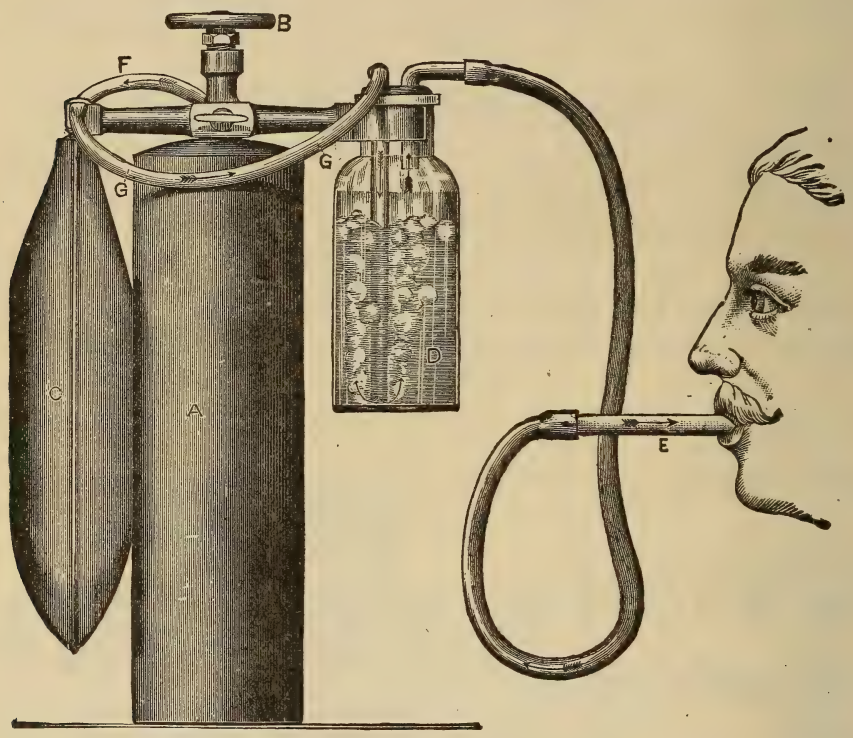
To whom all orders for samples must be addressed.

SVAPNIA IS FOR SALE BY DRUGGISTS GENERALLY.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

ESTABLISHED 1858.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

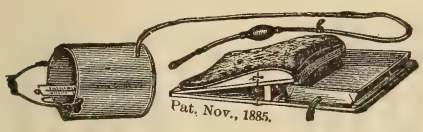
For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.



THE PERFECTION DOUCHE.

Compared with other kinds of receivers and bed pans the perfection Douche provides the **most convenient apparatus extant, for the thorough and prolonged application of hot water** in the treatment of uterine and pelvic diseases. Prices, descriptive circulars and testimonials furnished on application. Address, "THE PERFECTION DOUCHE," Box 7, Albany, N. Y., or E. A. Yarnall Co., 1020 Walnut Street, Philadelphia.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY IS A DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 2% OF METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLUBOSKOS

GREEK { Polus - much / Boskos - nourishing

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS AND INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC

Especially for Diabetics.

Supplies the waning energies of the young babe.

Stimulates and increases the health of the growing child.

Aids the weakest stomach and digestion.

Stimulates appetites in dyspepsia and convalescence from wasting diseases.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

PULMONARY CONSUMPTION

(THE TREATMENT BY THE SHURLY-GIBBES METHOD.)

THE experiments and results obtained by Heneage Gibbes, M. D., Professor of Pathology, Michigan University, and E. L. Shurly, M. D., Professor of Clinical Medicine and Laryngology, at the Detroit College of Medicine, in the treatment of Pulmonary Consumption with solutions of chemically pure iodine and chloride of gold and sodium are already well known to the Medical profession.

It is not claiming too much for this method to the state that the results from its employment have been far more promising than those obtained from tuberculine, or from any method for the treatment of pulmonary consumption hitherto attempted.

It gives us much pleasure therefore to announce that we are now prepared to supply the necessary solutions in any quantity desired, (with the endorsement of Drs. Shurly and Gibbes), and to guarantee their purity and uniform quantity.

Reprints of recorded methods of using these solutions, with clinical reports, will be mailed physicians on request.

The solutions are put up in one-ounce bottles. Price per ounce of each solution, $1.00.

PARKE, DAVIS & CO.,

DETROIT AND NEW YORK.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

CHLORALAMID possesses undoubted advantages over other similar preparations, and the many trials made and reported since its comparatively recent introduction have been unanimously favorable. A 48-page descriptive pamphlet to any physician on request; a 5 dose sample sent by mail, prepaid, on receipt of 15 cents in stamps.

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen:. We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10.50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.
Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WOMAN'S MEDICAL COLLEGE

OF BALTIMORE.

No. 1 Mount Royal Terrace, Baltimore, Md.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

E. E. MONTGOMERY, M. D.,
1318 Arch Street, Philadelphia, Pa.

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,
226 East 20th St., New York City.

D. B. ST. JOHN ROOSA, M. D., LL.D., PRESIDENT.
F. E. FARRELL, SUPERINTENDENT.

COLLEGE OF MEDICINE. SYRACUSE UNIVERSITY.

FACULTY.

JOHN VAN DUYN, M. D., Surgery.
HENRY D. DIDAMA, M. D., Practice and Clinical Medicine.
WILLIAM T. PLANT, M. D., Diseases of Children.
ALFRED MERCER, M. D., State Medicine.
WILLIAM MANLIUS SMITH, M. D., Chemistry.
DAVID M. TOTMAN, M. D., Clinical Surgery,
NATHAN JACOBSON, M. D., Clinical Surgery and Laryngology.
GAYLORD P. CLARK, M. D., Anatomy.
WILLIAM H. DUNLAP, M. D., Dermatology.
JOHN L. HEFFRON, M. D., Materia Medica and Therapeutics.
HENRY B. ALLEN, M. D., Obstetrics.
A. CLIFFORD MERCER, M. D., Pathology.
HENRY L. ELSNER, M. D., Clinical Medicine.
FRANK W. MARLOW, M. D., Ophthalmology.

Three Years' Graded Course. Year begins October 7th, 1890, ends in June, 1891.

FIRST YEAR: Anatomy, Physiology, Chemistry, Histology, Materia Medica.
SECOND YEAR: Anatomy, Physiology, Chemistry, Therapeutics, Pathology, Practice, Surgery, Clinical Medicine and Surgery.
THIRD YEAR: Therapeutics, Practice, Surgery, Children, Clinics, Obstetrics, Gynæcology, Forensic Medicine, Ophthalmology, Hygiene.

An experience of seventeen years has demonstrated that a three years' graded course is superior in every respect to an ungraded, unnatural, and cramming course of two winters.

Tuition, $80.00 for each Year. Perpetual Ticket, $200.00. Diploma, $25.00.

For circulars with full information, address
W. H. DUNLAP, M. D., Registrar, SYRACUSE, N. Y.

UNIVERSITY OF PENNSYLVANIA.—Medical Department.

The 125TH ANNUAL WINTER SESSION will begin Wednesday, October 1st, 1890, at 12 M., and will continue seven months. The PRELIMINARY SESSION begins September 22d, 1890, the Spring Term early in May, 1891.

The curriculum is graded and three annual winter sessions are required. Practical instruction, including laboratory work in Chemistry, Histology, Osteology and Pathology, with Bedside Instruction in Medicine, Surgery and Gynecology are a part of the regular course and without additional expense.

FACULTY.

JOSEPH LEIDY, M.D., LL.D., Professor of Anatomy.
D. HAYES AGNEW, M.D., LL.D., Honorary Professor of Clinical Surgery.
WILLIAM PEPPER, M.D., LL.D., Professor of Theory and Practice of Medicine, and of Clinical Medicine.
WILLIAM GOODELL, M.D., Professor of Gynecology.
JAMES TYSON, M.D., Professor of Clinical Medicine.
HORATIO C. WOOD, M.D., LL.D., Professor of Materia Medica, Pharmacy and General Therapeutics.
THEODORE G. WORMLEY, M.D., LL.D., Professor of Chemistry and Toxicology.
JOHN ASHHURST, JR., M.D., Professor of Surgery and of Clinical Surgery.
EDWARD T. REICHERT, M.D. Professor of Physiology.
WILLIAM F. NORRIS, M.D., Honorary Prof. of Ophthalmology
BARTON COOKE HIRST, M.D., Professor of Obstetrics.
J. WILLIAM WHITE, M.D., Professor of Clinical Surgery.
JOHN GUITÉRAS, M.D., Professor of General Pathology and Morbid Anatomy.
GEORGE A. PIERSOL, M.D., Professor of Histology and Embryology.
Professor of Hygiene.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{20}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{30}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE.

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, **"With Iron, No. 1;"** while the same preparation, **Without Iron,** is designated on the label as **"No. 2."**

In prescribing this preparation, physicians should be particular to mention *"COLDEN'S,"* viz., *"Ext. Carnis Fl. Comp. (Colden.)"* A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. ***Sold by druggists generally.***

CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless.
Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARC[illegible] of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts o[illegible]

CAUTION.—By specifying in your prescription[illegible]drogen (Medicinal)," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my labe[illegible]ion. Never sold in bulk.

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . 1 gr.
Ferri Valerianat, . . . 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"*Editor Medical Brief, St. Louis, Mo.:*

"*The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.*

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(*M. ft. pil. No. 20. Sig. One, three times a day.*)

"*The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.*

"*Please try them and report. Your success will be sure.*

"*S. A. DE FOE, M. D.,*
"*Washington, N. Y.*"

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

JOHN C. BAKER & CO.'S
STANDARD PREPARATIONS.

Baker's Pure Norwegian Cod Liver Oil.
Established 1830.
Put up in our capsuled bottles with steel engraved label. Will always be found of unequalled quality, and sure to yield the most satisfactory results.

OFFICE AND LABORATORY.
815 FILBERT STREET,
PHILADELPHIA.

Baker's Cod Liver Oil and Malt Extract.
SOLUTION FERROUS MALATE,
SOLUTION SALICYLATE IRON,

BAKER'S EMULSION.
C. L. Oil with Hypo-phosphites. Made with our unequalled Norwegian Oil, rendering it by common consent the Best Emulsion in the market.

IN GYNÆCOLOGICAL PRACTICE

For Sub-Involution, Congestive Dysmenorrhœa, Chronic Metritis, &c.

AS AN INJECTION

For Hemorrhoids, Relaxation of Sphincter, Prolapsus of Rectum, &c.

AS A LOCAL APPLICATION

For Congestion of Mucous Membranes as in Conjunctivitis, Cervicitis, Pharyngitis, Gonorrhœa, &c.

HYPODERMICALLY

Or by the mouth, for Aneurisms, Dilatation of Heart, Acute and Chronic Dysentery, Hæmoptysis, Hæmaturia and other Hemorrhages; Chronic Arteritis, Incontinence, Spermatorrhœa, Varicocele, Varicose Veins, Diabetes Insipidus; with the Bromides for Spinal Meningitis, Acute Myelitis and Congestion of Meninges and Cord, and in obstetric practice, especially when Post-Partum Hemorrhage is threatened,

ERGOTOLE S.&D.'s

has been most successfully employed. When given hypodermically, more prompt action and the best results are usually obtained.

Ergotole is a new preparation of Ergot of Rye. It is specially made for hypodermic use by a new process; representing all the active principles of Ergot in a very concentrated form, and entirely freed from all inert and irritating constituents.

It causes neither pain nor abscess, and **keeps perfectly without precipitation for any length of time.** It has been extensively tried in hospital and private practice, hypodermically and administered by the mouth, proving uniformly efficacious, and it has been pronounced

THE MOST EFFICIENT PREPARATION OF ERGOT IN USE

One minim representing the full therapeutic strength of about 2½ grains of the best Spanish Ergot. Administered by the mouth, it will prove itself divested of all irritating and nauseating properties, which are so objectionable in the officinal fluid extract.

An eminent physician of Baltimore states that he has had uniform and satisfactory results in over fifty cases of various diseases from a supply of our Ergotole, which was prepared over two years ago, and kept in a cork-stopped bottle partially filled.

ESTABLISHED 1860. 1 **BALTIMORE, MD.**

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free. Address, giving both Post and Express Offices.

36 PLATT STREET, NEW YORK.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

CASWELL, MASSEY & CO.'S

QUININE CHOCOLATES

(REGISTERED IN U. S. PATENT OFFICE).

The chocolate used in the preparation of these tablets disguises the bitter taste of the Quinine without, in the least, impairing its therapeutic value. They are suitable in the entire range of conditions where Quinine is indicated, but are especially recommended in the sub-acute and chronic forms of malaria, characterized by headache, neuralgia, loss of appetite, and general *malaise*. They are quite palatable to children, and for this reason, will be found invaluable in entero-colitis, and other Spring and summer complaints; or, as a restorative tonic in all cases of debility. The Chocolates are unequaled as an elegant and reliable prophylactic for persons residing in, or passing through, malarial districts. Each tablet contains one grain of tannate of Quinine; the dose, therefore, ranges from one or two daily, to a dozen or more, repeated as often as necessary, according to circumstances, or as directed by physician.

The above is a copy of the label on each box of CASWELL, MASSEY & Co.'s QUININE CHOCOLATES so highly approved and extensively prescribed by the Medical Faculty of the U. S.

A box will be forwarded free of charge to any Physician sending his address to C., M. & Co., 1121 Broadway.

A single comparative trial will prove conclusively their great superiority to any of the numerous imitations.

When prescribing kindly write for "CASWELL, MASSEY & Co.'s QUININE CHOCOLATES

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

—Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

—Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

—Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

RELIEF FROM PAIN

AND

REFRESHING SLEEP

Can be obtained for your patient, by administering

℞ Bromidia (Battle) 1 ounce.
Papine (Battle) 1 ounce.

Mix. Sig:—One teaspoonful, repeated as required.

☞ The above formula is largely used by European and American physicians, and **UNIVERSALLY** gives entire satisfaction, **WHEN** the Genuine Products of the Laboratory of the well-known House of Battle & Co, are used.

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% of METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLUBOSKOS

GREEK {Polus • much / Boskos • nourishing}

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS and INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC Especially for Diabetics.

Supplies the waning energies of the young babe.

Stimulates and increases the health of the growing child.

Aids the weakest stomach and digestion.

Stimulates appetites in dyspepsia and convalescence from wasting diseases.

MANUFACTURED ONLY BY CRYSTAL SPRINGS MFG. CO. 86 State St. Boston, Mass.

Depot EISNER AND MENDELSON CO., 6 Barclay St., New York.

Physical Exhaustion

HORSFORD'S ACID PHOSPHATE.

It is a well-known physiological fact that the phosphates are involved in all waste and repair, and are consumed with every effort. The quantity secreted by the kidneys is increased by labor of the muscles.

In the healthy organization the phosphate of lime exists in the muscles and bones. This phosphate is supplied by this preparation in such form as to be readily assimilated.

Dr. J. P. COWLES, Camden, Me., says: "I have used it in cases of physical debility arising from exhaustive habits or labors, with beneficial results."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION:—Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{50}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{10}$ gr.), Antimony Tart. $\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

"Of late years the Queen, by the advice of Sir William Jenner, has usually taken Apollinaris Water."—THE WORLD, LONDON.

THE BEST NATURAL APERIENT.

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

POST OFFICE BOX 843. **PHILADELPHIA.**

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.
Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

HOME FOR HABITUES.

OPIUM, CHLORAL, COCAINE.

DR. J. B. MATTISON.

Continues to receive at his residence, 314 State Street, Brooklyn, N. Y., a limited number of these habitues, to whom he devotes his *exclusive* professional attention. Patients Six, and Select. Attractive apartments, liberally cuisine, desirable privacy, cheerful society, and *personal* professional attention, based on several years' experience in the treatment of this disease. Details on application.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL.
SESSIONS 1890-91.

The Autumn and Winter Sessions of the Post-Graduate Medical School opened on September 15. The Hospital is fully utilized for clinical purposes. There are ninety beds, including thirty for babies in the adjacent building. No Post-Graduate Medical School in this country can offer such opportunities for seeing important surgical and gynæcological operations under its own roof as does this institution. Besides, regular clinics, medical and surgical, are held by professors and instructors in those general and special hospitals with which they are connected, which comprises nearly all the great hospitals of the city. The dispensary of the school and other large dispensaries furnish ample means of instruction in every class of walking cases.

Instruction is given in every branch of medicine and surgery. The laboratory is large and well equipped. Surgical anatomy and operative surgery are thoroughly taught. The instruction is personal, the practitioner being brought in direct contact with the patient. No other courses in any department will be required if those to be had in the Post-Graduate School are taken. The faculty were the first in the United States to organize private courses for practitioners of medicine, and they pledge themselves to leave nothing undone to make graduates in medicine profit by the unrivalled clinical advantages of the City of New York.

For catalogue and schedule, address

CLARENCE C. RICE, M. D., Secretary,
226 East 20th St., New York City.

CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT, AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS.

Laboratory, 10 West Fourth Street, New York.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BLAUD

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Do not fail to read our Proposition at the bottom of page.*

THE MOST PERFECT ARTIFICAL INFANT FOOD.

It goes without saying that a child, to be perfectly nourished, should be fed on healthy human milk, or its equivalent, during the nursing period, or at least until seven months of ago. If a child under seven months of age **MUST** be **ARTIFICALLY NOURISHED,**

LACTO-PREPARATA

is the only Food which meets every requirement, as it is the only perfect **ARTIFICIAL HUMAN MILK** ever produced; when dissolved in luke-warm water it practically resembles human milk in *composition, character,* and *taste.*

It is made from pure cow's milk, contains no cereals in any form, and is treated according to the directions of **PROF. ATTFIELD FOR STERILIZING MILK.**

LACTO-PREPARATA and **CARNRICK'S FOOD** are not put up in air-tight cans **ONLY** and will keep perfectly.

CARNICK'S FOOD

is composed of two-thirds of **LACTO-PREPARATA,** and one-third of dextrinized wheat, and is more especially intended for children from seven months to two years of age.

A PROPOSITION TO ANY PHYSICIAN.

* The flesh of all children fed ***alone*** on ***LACTO-PREPARATA*** or ***CARNRICK'S FOOD*** is ***firm*** and ***solid,*** because they contain the requisite amount of ***albuminoid constituents.***

The flesh of all children fed alone on any other Milk Foods (containing as they do 90 to 94 per cent. of cereals), is soft and flabby, because they do not contain sufficient nitrogenous elements, and the children thus nourished will in consequence quickly collapse when attacked with any serious complaint.

We respectfully request Physicians who are prescribing these Foods to examine the flesh of the Infants and verify our statements.

We are so confident that our Foods are practically perfect as substitutes for healthy human milk that we will furnish gratis to any Physician who is now prescribing other Foods or cow's milk, sufficient of our preparations to enable him to judge of their dietetic value in perfect nourishing qualities, as compared with other foods for similar purposes.

REED & CARNRICK, MANUFACTURING CHEMISTS,

NEW YORK.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known.
It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED
IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, 'Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

The Missouri Pacific R'y Co.,

LEASED AND OPERATED LINES.

HOSPITAL DEPARTMENT.

W. B. OUTTEN, *Chief Surgeon, St. Louis, Mo.*
W. P. KING, *Ass't Chief Surgeon, Kansas City, Mo.*
D. J. HOLLAND, *Ass't Chief Surgeon, Atchison, Kan.*
R. C. VOLKER, *Ass't Chief Surgeon, Ft. Worth, Tex.*
S. W. JENKINS, *Dep't Purveyor, St. Louis, Mo.*

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEER CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

Doctor:

We wish to speak to you of one indication for the use of the Hypophosphites of Lime and Soda, which is most often overlooked.

There is a certain perversion of the process of nutrition, characterized by a hyperplasia of certain tissues, causing a pathological growth of those tissues.

Such an example is seen in Fibroid Tumors.

A careful histo-chemical examination of these cases shows that there is always a lack of the proper proportion of these important tissue salts.

Chemical experience demonstrates that their introduction, chemically pure, in a finely divided form, rapidly checks the pathological process.

These valuable salts will be found to control most other perversions of nutrition, as Consumption of the Lungs, Tabes Mesenterica, Chronic Inflammation of the respiratory passages, Scrofula and all its manifestations, Degenerations of the Nervous System, Muscular Atrophy, &c.

The one great desideratum is to obtain these inorganic salts in their absolute chemical purity, and in a pleasant and convenient vehicle. These requirements are all met in McArthur's Syrup, consisting of the pure Hypophosphites of Lime and Soda, especially prepared and thoroughly dissolved.

There are no other medicinal agents in the preparation, as will be found in others making similar claims, as these two salts form a distinct therapeutic unit, all the irritating stimulants being foreign to it.

If special cases temporarily require other medication, you can add the required ingredients to the Syrup in your prescription.

Write your prescription thus:

Syr. Hypophos. Comp., C. P. McArthur.

If you are interested we will send you, free, our valuable treatise, "The Curability and Treatment of Consumption;" also a large bottle of the Syrup, if you will pay express charges.

SULFONAL-BAYER.

A CORRECT METHOD OF ADMINISTRATION, ESSENTIAL TO OBTAINING ITS HYPNOTIC EFFECT.

Inquiries have been made of us from time to time as to the best method of administering Sulfonal-Bayer. These inquiries indicate that various methods of administration have been employed, and this, without doubt, accounts for those cases where the results obtained were not wholly satisfactory. We call special attention to the following:

"*Clinically observed, we recognize in Sulfonal a mild calmative,* a slowly but progressively active hypnotic. *It has no other action, and its operation is attended by no complications, near or remote. It is, therefore, a pure hypnotic.*"

"*The essential conditions of success in the exhibition of Sulfonal depend on first, the* time *when the remedy should be administered; second, the* method *of administration; third, the* dose."

"*It is a fact, perhaps wholly unprecedented in what we observe of other neurotic materials, that Sulfonal demands from two hours to one hour for its physiological incubation; often quite two hours elapse between ingestion and the first accession of sensible medicinal energy. With the untried subject it is wise to stipulate for two hours.*"—[Extracts from articles by PROF. H. M. FIELD, *New England Medical Monthly; Therapeutic Gazette.*]

According to the experience of Prof. A. Kast, of Freiburg University, Sulfonal-Bayer should be administered in a plate of soup, a cup of hot *tea, milk or broth, at least two hours before retiring, or with the last meal early in the evening, between 7 and 8 P. M., at which time the stomach contains considerable amount of muriatic acid, mineral salts and peptones, and the most favorable conditions for the absorption are satisfied.*

Sulfonal has just been incorporated into the Addendum to the British Pharmacopœia.

Sulfonal-Bayer, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tablets of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer Sulfonal-Bayer in the form of our soluble pills, containing 5 grains each.

ARISTOL.

In order to secure the desired effects of Aristol, it is important that the physician be certain *that the article used bears the guarantee furnished by the continuous scientific control and the name of the manufacturers, the "Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld." This firm are the* only *manufacturers of this article, and the word "Aristol" is their registered property.*

The preparation of Aristol, theoretically simple, involves the greatest care and experience.

Aristol, a combination of iodine and thymol, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, Germany, is a valuable, inodorous, and non-toxic antiseptic remedy, superior to iodoform, iodole, and sozo-iodole.

The general specific action of Aristol is similar to that of iodoform, iodol, and the sozo-iodol compounds, but in addition it has the valuable property of forming an absolutely unirritant covering over the surfaces on which it is placed, under which the processes of granulation and cicatrization proceed with extraordinary rapidity.

Aristol is indicated in Mycosis, Lupis, Psoriasis, Syphilitic diseases generally, etc., etc.

Descriptive pamphlet mailed on application.

PHENACETINE-BAYER.

Antineuralgic-Antipyretic.

Much valuable testimony regarding Phenacetine, furnished by the medical profession of other countries, as well as our own, has, from time to time, been collated by us, and the same has been put before American practitioners.

The scope of Phenacetine having widened, we have brought together in pamphlet form, classified in respect to diseases indicated, the results of the latest experience as reported chiefly by American physicians.

This pamphlet mailed to applicants.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa.
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane. Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians, etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. HALE WHITE (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

DR. JOHN AULDE suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

Messrs. John C. Baker & Co.

Gentlemen:

It affords me pleasure to have the opportunity of recommending your Cod Liver Oil to the medical profession. I feel satisfied that a purer and more efficacious article can not be obtained in the market.

Yours, with respect, JOSEPH LEIDY,

Professor of Anatomy in the University of Penna.

Baker's Pure Norwegian Cod Liver Oil.

Established 1830.

Put up in our capsuled bottles with steel engraved label. Will always be found of unequalled quality, and sure to yield the most satisfactory results.

Baker's Cod Liver Oil and Malt Extract.

SOLUTION FERROUS MALATE,
SOLUTION SALICYLATE IRON,
BARLETT'S PILE SUPPOSITORIES.

JOHN C. BAKER & CO.,

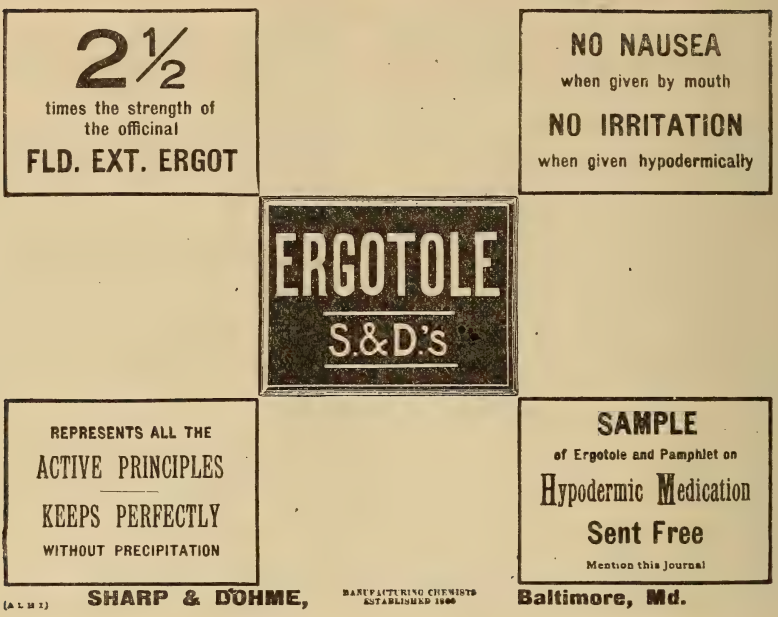
OFFICE AND LABORATORY.

815 FILBERT STREET,

PHILADELPHIA.

BAKER'S EMULSION.

C. L. Oil with Hypo-phosphites. Made with our unequalled Norwegian Oil, rendering it by common consent the Best Emulsion in the market.



PLACENTA PRAEVIA,

Treatment by Ergotole.

In a case of Placenta Praevia with terrific flooding, when the Fluid Extract of Ergot could not be retained by the stomach, "Ergotole"—a most concentrated and efficient preparation of Ergot, manufactured by Sharp & Dohme of Baltimore, Md.—was used with the greatest satisfaction, and I am particularly pleased with it. I administered ten minims hypodermically and it acted magically. I think that the Profession should be made acquainted with its valuable properties, as I consider it the duty of every Physician to do all in his power to make known a remedy which he has seen save human lives, as the "Ergotole" certainly did in this frightful case of flooding. I have used it in other cases when the Fluid Extract could not be retained on the stomach, and I regard it a most valuable addition to the science of Therapeutics.

I think no Physician should be without "Ergotole;" it is the most satisfactory preparation I have over used in a practice of more than forty-two years.

WM. E. WYSHAM, M. D.,

Catonsville, Baltimore Co., Md.

SHARP & DOHME, BALTIMORE, MD.

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free. Address, giving both Post and Express Offices.

HENRY B. PLATT,
36 Platt Street, New York.

GOLD MEDAL, PARIS, 1878.

W. Baker & Co.'s Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

DR. MASSEY'S

Private Sanitorium.

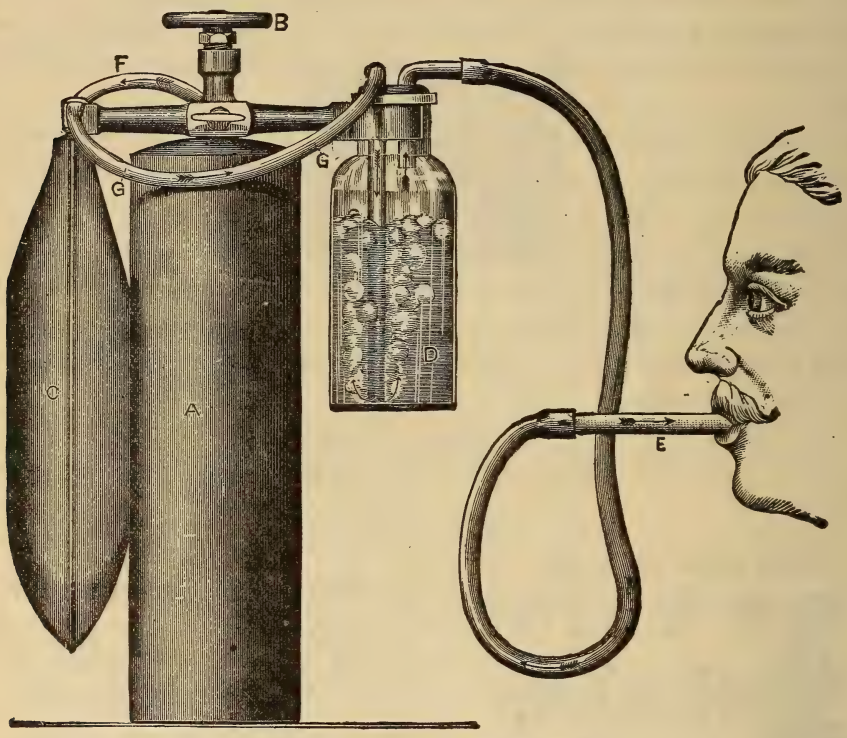
HATBORO, MONT., CO., PA.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— Landois and Sterling.

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— Materia Medica and Therapeutics, Dr. Mitchell Bruce.

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— Eustace Smith, M.D., F.R.C.S.

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,

BOSTON, MASS.

DREAMLESS SLEEP.

About eighteen months ago a friend of mine from America told me of the wonderful effects of a medicine, much used in the States, called BROMIDIA, which is a combination of Chloral, Bromide Potass, Cannabis Indica and Hyoscyamus. I obtained some, and have ordered it regularly for over a year; and have found it excellent in the pain of rheumatism, pneumonia and cancer; also in the sleeplessness of scarlatina and alcoholism. It has never failed me in procuring sleep, without the disagreeable dreams and after effects of opium. The dose is ℥ss. to ℥j. every hour till sleep is produced. I have also found it of much service in cases of tonsilitis, used as a gargle with glycerine and carbolic acid. Extract from recent article in *Edinburg Med. Journal*, Vol. XXXI., No. X., by

J. LINDSAY PORTEOUS,

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 5% OF METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste. It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

PULMONARY

CONSUMPTION

(THE TREATMENT BY THE SHURLY-GIBBES METHOD.)

THE experiments and results, obtained by Heneage Gibbes, M. D., Professor of Pathology, Michigan University, and E. L. Shurly, M. D., Professor of Clinical Medicine and Laryngology at the Detroit College of Medicine, in the treatment of Pulmonary Consumption with solutions of chemically pure iodine and chloride of gold and sodium are already well known to the Medical Profession.

It is not claiming too much for this method to state that the results from its employment have been far more promising than those obtained from tuberculin, or from any method for the treatment of pulmonary consumption hitherto attempted.

It gives us much pleasure therefore to announce that we are now prepared to supply the necessary solutions in any quantity desired (with the endorsement of Drs. Shurly and Gibbes), and to guarantee their purity and uniform quality.

Reprints of recorded methods of using these solutions, with clinical reports, will be mailed physicians on request.

The solutions are put up in one-ounce bottles. Price per ounce of each solution, $1.00.

PARKE, DAVIS & CO.,

DETROIT AND NEW YORK.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

RIO CHEMICAL CO., St. Louis, Mo., U. S. A.

LONDON. PARIS. CALCUTTA. MONTREAL.

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

WOMAN'S MEDICAL COLLEGE

OF BALTIMORE.

S. E. Cor. Druid Hill Ave. and Hoffman Street.

The Ninth regular session will begin October 1, 1891, and continue seven months. For further information or catalogue apply to

No. 1 Mount Royal Terrace, Baltimore, Md.

A middle aged, single Physician, having devoted two years to obstetrics and Gynecology in Europe, desires a position in a Medical School or Hospital. Reference given. "S" MEDICAL AND SURGICAL REPORTER.

THE PERFECTION DOUCHE.

Compared with other kinds of receivers and bed pans the perfection Douche provides the **most convenient apparatus extant, for the thorough and prolonged application of hot water** in the treatment of uterine and pelvic diseases. Prices, descriptive circulars and testimonials furnished on application. Address, "THE PERFECTION, DOUCHE," Box 7, Albany, N. Y., or E. A. Yarnall Co. 1020 Walnut Street, Philadelphia.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{300}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

Thirteenth & Walnut Streets——Nineteenth & Arch Streets,

PHILADELPHIA.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. **NEW YORK, N. Y.**

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil.....80 m. (drops)		Soda.....1-3 Grains.	
Distilled Water.....35 "		Salicylic Acid.....1-4 "	
Soluble Pancreatin..... 5 Grains.		Hyocholic Acid.....1-90 "	

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

The American Antipyrectic, Analgesic and Anodyne.

Antikamnia

OPPOSED TO PAIN

A SUCCEDANEUM FOR MORPHIA.

Maltine

WITH

Cascara Sagrada

Peristalsis Re-established and Permanently Maintained.

Rendered Palatable by Combining the "Bitter with the Sweet."

It is Especially Indicated in Constipation of Pregnancy.

No Griping; No Nausea; nor any Distressing Re-action.

The System Nourished by Tonic Properties of Maltine.

The Ideal Laxative for Children.

Maltine

MALTINE, the base of this Preparation, is a Powerful Reconstructive, while the base of "Syrups of Hypophosphites," being a Solution of Cane Sugar, is inert.

By the Diastasic Action of Maltine, the Farinaceous Foods are converted into Soluble Form, General Digestion is Stimulated, and the Salts of Lime, Soda and Iron are readily assimilated.

Maltine

WITH

Hypophosphites

Upon application we will send to any physician, who will pay express charges, a case containing an eight ounce bottle of each of the above preparations; also, descriptive card of MALTINE and its eight compounds with their formulæ.

ARISTOL.

While possessing all of the virtues of iodoform, and many properties not claimed for the latter **ARISTOL** has **NO TOXIC INFLUENCE AND NO DISAGREEABLE ODOR.**

The efficacy of **ARISTOL** has been widely tested by physicians and surgeons. As a simple dressing it now **HEADS THE LIST OF LOCAL REMEDIAL AGENTS,** and the results obtained in the **GREAT VARIETY OF MORBID LESIONS** for which it has been employed, have been wholly satisfactory.

ARISTOL has been widely commended for its special adaptability to all surgical and pharmaceutical requirements. It may be used in the form of **OINTMENTS, CRAYONS, SUPPOSITORIES, BALLS, OILS, SPRAYS, COLLODIONS, POWDERS, PLASTERS, Etc.,** while it is equally suitable for **TAMPONS, BANDAGES, GAUZE,** and other topical appliances. Used as a powder, it forms **AN IMPERVIOUS ANTISEPTIC COATING,** which gives it an exceptional value in **ULCERATIONS, BURNS, Etc.**

ARISTOL has been used with unqualified satisfaction by able and experienced clinicians in **DERMATOLOGY, SYPHILOLOGY, GYNÆCOLOGY, OPHTHALMOLOGY, Etc.,** and in all of those diatheses in whose course such lesions supervene as call for **ACTIVE, LOCAL MEDICATION.**

ARISTOL is demonstrated to possess **EXCEPTIONAL EFFICACY AS A CICATRISANT.** In **ULCERATIONS,** of whatever character they may be, in **BURNS,** and in **ALL OPEN LESIONS,** the efficacy of **ARISTOL** cannot be overestimated.

Hence its great value in the **DERMATOSES,** the **SOLUTIONS OF CONTINUITY** dependent upon **PHTHISIS, SCROFULOSIS, SYPHILIS, VARIX** and accessible **TRAUMATISMS,** and in the **SUPPURATIVE LESIONS** following many inflammations. Its value in **BURNS,** as in all the operations of **MINOR SURGERY,** is exceptional, while in **DENTAL SURGERY** it has given very valuable results.

Applied to the **MUCOUS SURFACES** of the **NATURAL CAVITIES,** in such conditions as **PHARINGITIS, RHINITIS, OTITIS METRITIS, URETHRITIS,** etc., etc., **ARISTOL** gives the same excellent effects as in tissue lesions.

☞Physicians are respectfulty requested to test for themselves the accuracy of these statements, while reading in our pamphlet of the results obtained by others. *Pamphlet mailed to applicants.*

The preparation of **ARISTOL,** theoretically simple, involves the greatest care and experience, and the word "**ARISTOL**" is the registered property of *The Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld.* In order, therefore, to secure the desired effect of **ARISTOL,** it is important that the physician be certain that the article used bears the name of these manufacturers, together with the name of W. H. Schieffelin & Co.

PHENACETINE-BAYER.

PHENACETINE-BAYER is a **ANTIPYRETIC** and **ANALGESIC,** whose **CERTAINTY OF ACTION** and **ABSOLUTE FREEDOM FROM TOXIC EFFECTS** has won for it the unqualified approval of practitioners.

PHENACETINE-BAYER is indicated in all **ACUTE, INFLAMMATORY FEVERS.** In **TYPHOID FEVER** it has given most satisfactory results, as in **ALL** of **THE EXANTHEMATA.**

PHENACETINE-BAYER is a powerful **ANTI-RHEUMATIC** and **ANTI-NEURALGIC.** It is one of the best and safest remedies for **MIGRAINE,** and gives excellent results in many forms of **INSOMNIA.**

PHENACETINE-BAYER has a very decided influence in **BRONCHITIS** and the **FEVERS OF PHTHISIS,** while in many acute respiratory conditions, such as **WHOOPING-COUGH,** etc., it acts almost as a specific.

In **INFLUENZA,** in the febrile, catarrhal or nervous forms of that condition, or when these forms are combined, **IT HAS GIVEN BETTER RESULTS THAN ANY REMEDY HITHERTO USED.**

PHENACETINE HAS THE ADVANTAGE OVER ALL THE FEBRIFUGES THAT IT ACTS PROMPTLY.

PHENACETINE-BAYER, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld is supplied by us in ounces.

We prepare pills and tablets of **PHENACETINE-BAYER,** containing 2, 3, 4 and 5 grains each.

☞*Pamphlets Mailed on Application.*

SULFONAL-BAYER.

As a **HYPNOTIC,** the first place in modern therapeutics must be given to **SULFONAL-BAYER.**

SULFONAL-BAYER is not alone valuable as a simple **HYPNOTIC.** Its effects as a **TRUE NERVE SEDATIVE** are demonstrated by its gentle, prolonged influence after a normal sedation shall have once been obtained by its employment.

SULFONAL-BAYER is used **IN ALL CASES IN WHICH A HYPNOTIC EFFECT IS DESIRED.** In the **INSOMNIA OF NERVOUS** and **FEBRILE CONDITIONS,** or their sequelæ, and the treatment of the **NEUROTIC MANIFESTATIONS OF THE INSANE,** its value is very pronounced. **SULFONAL** is also employed in **DIABETES,** and, combined with other medicaments, **IN ALL MALADIES IN WHICH NERVOUS INFLUENCES CONSTITUTE A DETERMINING FACTOR.**

☞To obtain the best effects of this medicament, it is necessary to administer it in a manner suited to the nature of its action. This matter is fully described in our pamphlet, which will be forwarded to any address.

SULFONAL-BAYER, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tables of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer **SULFONAL-BAYER** in the form of our soluble pills, containing 5 grains each.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa.
Dr. T. W. Bowell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane. Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

Messrs. JOHN C. BAKER & Co.

Gentlemen:

It affords me pleasure to have the opportunity of recommending your Cod Liver Oil to the medical profession. I feel satisfied that a purer and more efficacious article can not be obtained in the market.

Yours, with respect, JOSEPH LEIDY,

Professor of Anatomy in the University of Penna.

Baker's Pure Norwegian Cod Liver Oil.

Established 1830.

Put up in our capsuled bottles with steel engraved label. Will always be found of unequalled quality, and sure to yield the most satisfactory results.

Baker's Cod Liver Oil and Malt Extract.

SOLUTION FERROUS MALATE,
SOLUTION SALICYLATE IRON,
BARLETT'S PILE SUPPOSITORIES.

BAKER'S EMULSION.

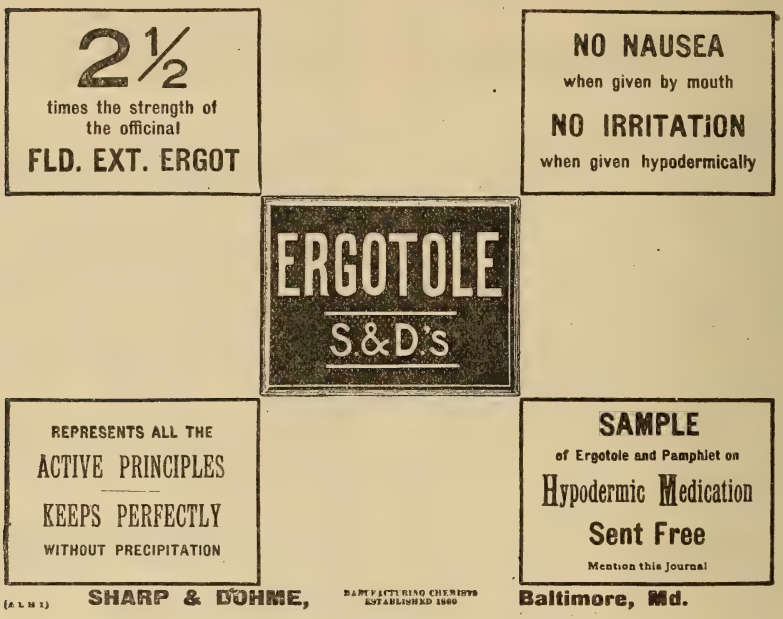
C. L. Oil with Hypo-phosphites. Made with our unequalled Norwegian Oil, rendering it by common consent the Best Emulsion in the market.

JOHN C. BAKER & CO.,

OFFICE AND LABORATORY.

815 FILBERT STREET

PHILADELPHIA.



PLACENTA PRAEVIA,

Treatment by Ergotole.

In a case of Placenta Praevia with terrific flooding, when the Fluid Extract of Ergot could not be retained by the stomach, "Ergotole"—a most concentrated and efficient preparation of Ergot, manufactured by Sharp & Dohme of Baltimore, Md.—was used with the greatest satisfaction, and I am particularly pleased with it. I administered ten minims hypodermically and it acted magically. I think that the Profession should be made acquainted with its valuable properties, as I consider it the duty of every Physician to do all in his power to make known a remedy which he has seen save human lives, as the "Ergotole" certainly did in this frightful case of flooding. I have used it in other cases when the Fluid Extract could not be retained on the stomach, and I regard it a most valuable addition to the science of Therapeutics.

I think no Physician should be without "Ergotole;" it is the most satisfactory preparation I have over used in a practice of more than forty-two years.

WM. E. WYSHAM, M. D.,

Catonsville, Baltimore Co., Md.

SHARP & DOHME, BALTIMORE, MD.

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free. Address, giving both Post and Express Offices.

HENRY B. PLATT,
36 Platt Street, New York.

GOLD MEDAL, PARIS, 1878.

W. Baker & Co.'s Breakfast Cocoa

from which the excess of oil has been removed, is

Absolutely Pure and it is Soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

DR. MASSEY'S

Private Sanitorium.

Presenting the comforts of an elegant private residence, this institution is specially equipped for the use of electricity and allied remedial measures in the diseases of women and in diseases of the nervous system. For particulars address

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

CASWELL, MASSEY & CO.'S

QUININE CHOCOLATES

(REGISTERED IN U. S. PATENT OFFICE).

The chocolate used in the preparation of these tablets disguises the bitter taste of the Quinine without, in the least, impairing its therapeutic value. They are suitable in the entire range of conditions where Quinine is indicated, but are especially recommended in the sub-acute and chronic forms of malaria, characterized by headache, neuralgia, loss of appetite, and general *malaise*. They are quite palatable to children, and for this reason, will be found invaluable in entero-colitis, and other Spring and summer complaints; or, as a restorative tonic in all cases of debility. The Chocolates are unequaled as an elegant and reliable prophylactic for persons residing in, or passing through, malarial districts. Each tablet contains one grain of tannate of Quinine; the dose, therefore, ranges from one or two daily, to a dozen or more, repeated as often as necessary, according to circumstances, or as directed by physician.

"The whole process is said to take about fifteen minutes, and to be very agreeable. Let me stimulate you to try this plan of treatment by telling you that I have seen it cause the scalp of one physician to take on a revigorated growth of hair."—GEORGE THOMAS JACKSON, M. D., *Chief of Dermatological Clinic, College of Phys. and Surg., New York, etc.* (*Gaillard's Med. Jour., May, 1890*).

DREAMLESS SLEEP.

About eighteen months ago a friend of mine from America told me of the wonderful effects of a medicine, much used in the States, called BROMIDIA, which is a combination of Chloral, Bromide Potass, Cannabis Indica and Hyoscyamus. I obtained some, and have ordered it regularly for over a year; and have found it excellent in the pain of rheumatism, pneumonia and cancer; also in the sleeplessness of scarlatina and alcoholism. It has never failed me in procuring sleep, without the disagreeable dreams and after effects of opium. The dose is ℥ss. to ℥j. every hour till sleep is produced. I have also found it of much service in cases of tonsilitis, used as a gargle with glycerine and carbolic acid. Extract from recent article in *Edinburg Med. Journal,* Vol. XXXI., No. X., by

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 2% NOT METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

GREEK {Polus - much / Boskos - nourishing}

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

POST OFFICE BOX 843. **PHILADELPHIA.**

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

GRIFFITH & CO.'S
Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify "GRIFFITH & CO.'S," or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.

Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

Carried in stock by the principal Wholesale Druggists in the U. S.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 66th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 22d of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy. Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin Wednesday, October 1st, and continue until April 16th. PRELIMINARY SESSION begins September 8th. SPRING TERM, April 20th, 1891.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For Announcement or information apply to

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{1000}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

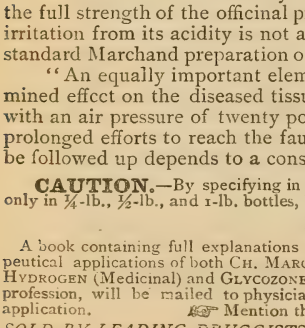
MANUFACTURERS OF PHYSICIANS' SPECIALTIES,

88 Maiden Lane, **New York City.**



CH. MARCHAND'S

PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (ABSOLUTELY HARMLESS.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,

AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. Geo. B. Hope, Surgeon Metropolitan Throat Hospital, Professor Diseases of Throat, University of Vermont, writes in an article headed, "Some Clinical Features of Diphtheria, and the treatment by Peroxide of Hydrogen" (*N. Y. Medical Record*, October 13, 1888). Extract:

". . . On account of their poisonous or irritant nature the active germicides have a utility limited particularly to surface or open wound applications, and their free use in reaching diphtheritic formations in the mouth or throat, particularly in children, is, unfortunately, not within the range of systematic treatment. In Peroxide of Hydrogen, however, it is confidently believed will be found, if not a specific, at least the most efficient topical agent in destroying the contagious element and limiting the spread of its formation, and at the same time a remedy which may be employed in the most thorough manner without dread of producing any vicious constitutional effect. . . .

"Inasmuch as the efficacy depends upon the ozonized oxygen in solution, it has seemed desirable to rely on the full strength of the officinal preparation of fifteen volumes, especially when used in the fauces, where any slight irritation from its acidity is not apparent. In all the cases treated (at the Metropolitan Throat Hospital), a fresh, standard Marchand preparation of fifteen volumes was that on which the experience of the writer has been based. . .

"An equally important element is in making the application in such a manner as to produce the most determined effect on the diseased tissues with as little local disturbance as possible. . . . A steady, coarse spray, with an air pressure of twenty pounds or more, will, in a few moments' time, produce a more positive action than prolonged efforts to reach the fauces by means of cotton applicators. . . . How frequently the treatment is to be followed up depends to a considerable extent on the density, as well as the area, of the surface involved. . "

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal)**," which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, ℥ i to ℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

Thirteenth & Walnut Streets——Nineteenth & Arch Streets,

PHILADELPHIA.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Do not fail to read our Proposition at the bottom of page.*

THE MOST PERFECT ARTIFICAL INFANT FOOD.

It goes without saying that a child, to be perfectly nourished, should be fed on healthy human milk, or its equivalent, during the nursing period, or at least until seven months of ago. If a child under seven months of age **MUST** be **ARTIFICALLY NOURISHED,**

LACTO-PREPARATA

is the only Food which meets every requirement, as it is the only perfect **ARTIFICIAL HUMAN MILK** ever produced; when dissolved in luke-warm water it practically resembles human milk in *composition, character,* and *taste.*

It is made from pure cow's milk, contains no cereals in any form, and is treated according to the directions of **PROF. ATTFIELD FOR STERILIZING MILK.**

LACTO-PREPARATA and **CARNRICK'S FOOD** are not put up in air-tight cans **ONLY** and will keep perfectly.

CARNICK'S FOOD

is composed of two-thirds of **LACTO-PREPARATA,** and one-third of dextrinized wheat, and is more especially intended for children from seven months to two years of age.

A PROPOSITION TO ANY PHYSICIAN.

* The flesh of all children fed ***alone*** on ***LACTO-PREPARATA*** or ***CARNRICK'S FOOD*** is ***firm*** and ***solid,*** because they contain the requisite amount of ***albuminoid constituents.***

The flesh of all children fed alone on any other Milk Foods (containing as they do 90 to 94 per cent. of cereals), is soft and flabby, because they do not contain sufficient nitrogenous elements, and the children thus nourished will in consequence quickly collapse when attacked with any serious complaint.

We respectfully request Physicians who are prescribing these Foods to examine the flesh of the Infants and verify our statements.

We are so confident that our Foods are practically perfect as substitutes for healthy human milk that we will furnish gratis to any Physician who is now prescribing other Foods or cow's milk, sufficient of our preparations to enable him to judge of their dietetic value in perfect nourishing qualities, as compared with other foods for similar purposes.

REED & CARNRICK, MANUFACTURING CHEMISTS,
NEW YORK.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED

IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufac ure.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, "Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

The Missouri Pacific R'y Co.,

LEASED AND OPERATED LINES.

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEEF CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc. one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point

MANUFACTURED BY

JOHN WYETH & BROTHER,

PHILADELPHIA, PA.

Doctor:

We wish to speak to you of one indication for the use of the Hypophosphites of Lime and Soda, which is most often overlooked.

There is a certain perversion of the process of nutrition, characterized by a hyperplasia of certain tissues, causing a pathological growth of those tissues.

Such an example is seen in Fibroid Tumors.

A careful histo-chemical examination of these cases shows that there is always a lack of the proper proportion of these important tissue salts.

Chemical experience demonstrates that their introduction, chemically pure, in a finely divided form, rapidly checks the pathological process.

These valuable salts will be found to control most other perversions of nutrition, as Consumption of the Lungs, Tabes Mesenterica, Chronic Inflammation of the respiratory passages, Scrofula and all its manifestations, Degenerations of the Nervous System, Muscular Atrophy, &c.

The one great desideratum is to obtain these inorganic salts in their absolute chemical purity, and in a pleasant and convenient vehicle. These requirements are all met in McArthur's Syrup, consisting of the pure Hypophosphites of Lime and Soda, especially prepared and thoroughly dissolved.

There are no other medicinal agents in the preparation, as will be found in others making similar claims, as these two salts form a distinct therapeutic unit, all the irritating stimulants being foreign to it.

If special cases temporarily require other medication, you can add the required ingredients to the Syrup in your prescription.

Write yourprescription thus:

Syr. Hypophos. Comp., C. P. McArthur.

If you are interested we will send you, free, our valuable treatise, "The Curability and Treatment of Consumption;" also a large bottle of the Syrup, if you will pay express charges.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa.
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College, Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians, etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make, ... 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

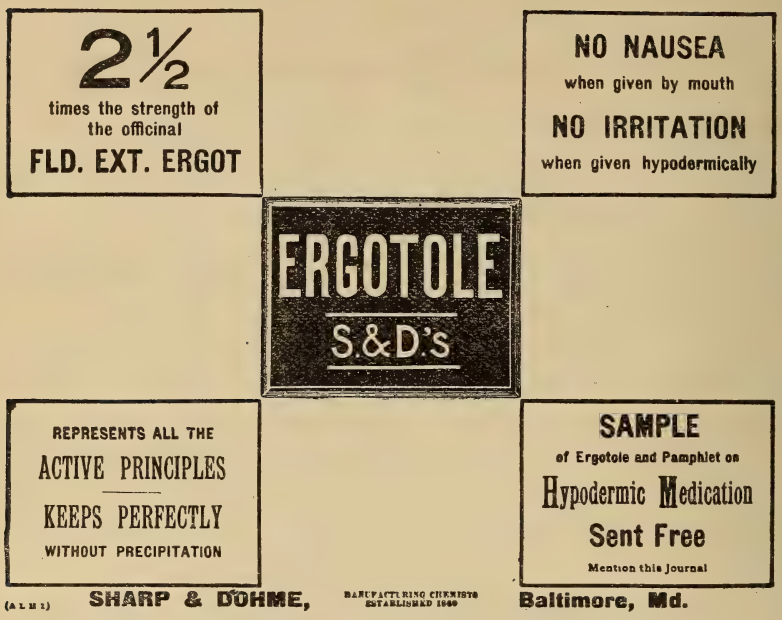
815 FILBERT STREET

PHILADELPHIA.

BAKER'S EMULSION.

C. L. Oil with Hypo-phosphites. Made with our unequalled Norwegian Oil, rendering it by common consent the Best Emulsion in the market.



PLACENTA PRAEVIA,

Treatment by Ergotole.

In a case of Placenta Praevia with terrific flooding, when the Fluid Extract of Ergot could not be retained by the stomach, "Ergotole"—a most concentrated and efficient preparation of Ergot, manufactured by Sharp & Dohme of Baltimore, Md.—was used with the greatest satisfaction, and I am particularly pleased with it. I administered ten minims hypodermically and it acted magically. I think that the Profession should be made acquainted with its valuable properties, as I consider it the duty of every Physician to do all in his power to make known a remedy which he has seen save human lives, as the "Ergotole" certainly did in this frightful case of flooding. I have used it in other cases when the Fluid Extract could not be retained on the stomach, and I regard it a most valuable addition to the science of Therapeutics.

I think no Physician should be without "Ergotole;" it is the most satisfactory preparation I have over used in a practice of more than forty-two years.

WM. E. WYSHAM, M. D.,

Catonsville, Baltimore Co., Md.

SHARP & DOHME, BALTIMORE, MD.

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free. Address, giving both Post and Express Offices.

HENRY B. PLATT,
36 PLATT STREET, NEW YORK.

Mellin's Food

FOR INFANTS AND INVALIDS.

A SOLUBLE DRY EXTRACT, prepared from Malted Barley and Wheat, consisting of Dextrin, Maltose, Albuminates, and Salts.

The SUGAR in MELLIN'S FOOD is MALTOSE. MALTOSE is the PROPER SUGAR for use in connection with cow's milk.

The sugar formed by the action of the Ptyalin of the Saliva and the Amylopsin of the Pancreas upon starch is MALTOSE. In the digestive tract MALTOSE is absorbed UNCHANGED.

— *Landois and Sterling.*

MALTOSE is a saccharose, not a glucose, and is a form of sugar which does not ferment.

— *Materia Medica and Therapeutics, Dr. Mitchell Bruce.*

"I have never seen any signs of fermentation which I could attribute to the influence of MALTOSE."

— *Eustace Smith, M.D., F.R.C.S.*

MELLIN'S FOOD, prepared according to the directions, is a true LIEBIG'S FOOD and the BEST SUBSTITUTE for Mother's Milk yet produced.

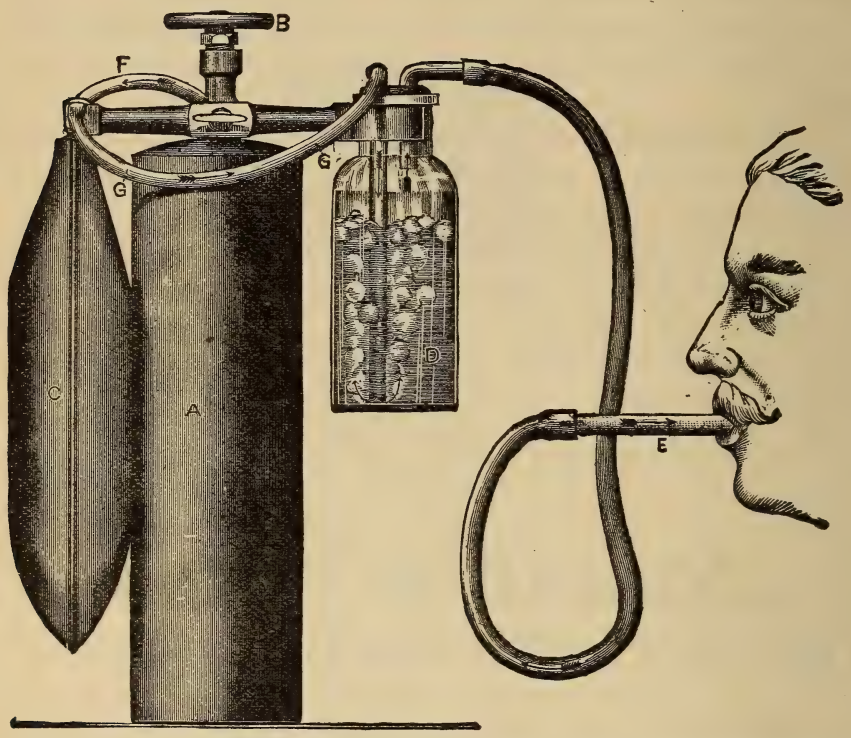
IT REQUIRES NO COOKING.

THE DOLIBER-GOODALE CO.,
BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

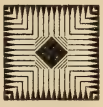
Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

Lactated Food.

Thousands of Physicians Prescribe It.



It is a cooked food, it contains no unchanged starch, it is 25 per cent. sugar of milk, it contains no cane sugar, it is the most economical.

LET US SEND YOU A PACKAGE

BROOKLYN HOME FOR HABITUES,

OPIUM, CHLORAL, COCAINE,

Dr. J. B. MATTISON, Medical Director,

185 Brooklyn Ave., bet. Park and Prospect Places,
BROOKLYN.
The only Home of its kind in the World.

Delightful location, charming surroundings, attractive apartments, desirable privacy, cheerful society, and *personal exclusive* professional attention, based on nineteen years' experience in the study of this disease. Details if desired.

A middle aged, single Physician, having devoted two years to obstetrics and Gynecology in Europe, desires a position in a Medical School or Hospital. Reference given. "S" MEDICAL AND SURGICAL REPORTER.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY IS A DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

T. D. CROTHERS, M.D.,
Sup't Walnut Lodge, Hartford, Conn.

DREAMLESS SLEEP.

About eighteen months ago a friend of mine from America told me of the wonderful effects of a medicine, much used in the States, called BROMIDIA, which is a combination of Chloral, Bromide Potass, Cannabis Indica and Hyoscyamus. I obtained some, and have ordered it regularly for over a year; and have found it excellent in the pain of rheumatism, pneumonia and cancer; also in the sleeplessness of scarlatina and alcoholism. It has never failed me in procuring sleep, without the disagreeable dreams and after effects of opium. The dose is ℥ss. to ℥j. every hour till sleep is produced. I have also found it of much service in cases of tonsilitis, used as a gargle with glycerine and carbolic acid. Extract from recent article in *Edinburg Med. Journal*, Vol. XXXI., No. X., by

J. LINDSAY PORTEOUS,

Radlauer's SAL-BROMALIDE "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, New York.

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% of METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

GREEK {Polus - much / Boskos - nourishing}

A PURE GLUTEN FOOD (PREPARED FROM WHEAT)

for INFANTS INVALIDS AND WEAK STOMACHS.

IT IS A POWERFUL NERVE TONIC

PULMONARY

CONSUMPTION

(THE TREATMENT BY THE SHURLY-GIBBES METHOD.)

THE experiments and results, obtained by Heneage Gibbes, M. D., Professor of Pathology, Michigan University, and E. L. Shurly, M. D., Professor of Clinical Medicine and Laryngology at the Detroit College of Medicine, in the treatment of Pulmonary Consumption with solutions of chemically pure iodine **and chloride of gold and** sodium are already well known to the Medical Profession.

It is not claiming too much for this method to state that the results from its employment have been far more promising than those obtained from tuberculin, or from any method for the treatment of pulmonary consumption hitherto attempted.

It gives us much pleasure therefore to announce that we are now prepared to supply the necessary solutions in any quantity desired (with the endorsement of Drs. Shurly and Gibbes), and to guarantee their purity and uniform quality.

Reprints of recorded methods of using these solutions, with clinical reports, will be mailed physicians on request.

The solutions are put up in one-ounce bottles. Price per ounce of each solution, $1.00.

PARKE, DAVIS & CO.,

DETROIT AND NEW YORK.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

Londonderry SPRING Lithia WATER

The Most Powerful Solvent of Uric Acid Known to the Profession.

USED AND PRESCRIBED BY ALL THE LEADING PHYSICIANS THROUGHOUT THE UNITED STATES AND EUROPE.

Transactions of the Fourth Annual Meeting of the American Climatological Association, held in the City of Baltimore, May, 31st and June 1st, 1887. Baltimore; Printed by the Association, 1887.

The Classification of American Waters.

By A. C. PEALE, M. D., *Consulting Chemist, United States Geological Survey.*

There is a fashion in Mineral Waters as in most other things. *Sulpho-Carbonated* waters promise to come to the front in the near future, and at the present time Lithia Waters occupy a prominent place. I know of but one Lithia water, however, in which the analysis shows enough Lithia proportionally to entitle it to a distinct and separate place on every scheme of classification; that one is from the *Londonderry Lithia Spring of New Hampshire.*

FRANK BILLINGS, M. D., *Professor of Clinical Medicine and Clinical Diagnosis. Professor of Physical Diagnosis and Clinical Medicine, Chicago Medical College.*

Londonderry Lithia Spring Water Co. CHICAGO, ILLS., April 18th, 1889.

Gentlemen: I have used the *Londonderry Lithia Spring Water* in many cases of chronic Gastroduodenitis, with marked relief to the consequent "Lithæmia," Myalgia, Neuralgia, etc. It is a splendid diluent, and is so pleasant that patients will take it in large quantities. A necessary thing when indicated.

Very respectfully, FRANK BILLINGS, M. D.

From E. E. DENNISON, M. D., *Surgeon R. C. S. Edinboro, Scot., Licentiate College of Pharmacy, Ire.; Intern and Licentiate of Midwifery, Rotunda, Ire.; Surgeon Provincial Fever Hospital.*

"I have personally tried and tested the *Londonderry Lithia Spring Water* for the relief of a *chronic rheumatism* that has annoyed me for years, and can most heartily indorse it and recommend its continued use to that large class of patients afflicted with the manifold and varied aches developed by the presence of *uric acid* in the blood. Without compromising in any degree the nutritive functions or their harmony with the rest of the organic system, it seems to neutralize the poison in the blood, which is the germ of the mischief and the suffering. Every physician should know this water and take it into his confidence."

NORTHAMPTON, JUNE, 1883.

HENRY M. FIELD, M. D., *Professor Therapeutics, Dartmouth Med. School, etc.*

Londonderry Lithia Spring Water Co. NEWTON, MASS., Nov. 20, 1889.

Gentlemen: I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the value and virtues of your Lithia water. Some way, as I believe, for a general practitioner, I have seen an exceptionally large number of cases of that most tormenting affection, the slow and halting passage of a renal calculus from kidney to bladder. The tortured patient does not wish a repetition of such agony; the competent physician ought, pretty surely, to protect him from such repetition. Since my attention was first called to your Lithia water—several years ago—and I became satisfied respecting its pre-eminent power, I *have used no other Lithia water*, and in the cases just characterized I depend upon the *Londonderry* invariably and often as a last resource. Thus far it has rendered so good an account of itself that I feel bound to make the account, which I render good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter.

Yours truthfully, HENRY M. FIELD, M. D.

NERVES.

Suppose we find the patient a little giddy upon rising in the morning. This means that the nerves do not have perfect control of the muscular system. As a test for this, direct the patient to stand with his feet close together, shut his eyes, and if the tendency is to reel, it is another evidence of lowered nerve tone. Or, stand with the arms extended, shut the eyes, and then try to bring the tips of his forefingers together in front of him. If they pass by or meet imperfectly, it shows the same thing.

Or, the person may not be able to think as quickly as he should. To test this, ask the patient three simple questions in rapid succession, as, Where were you just before you came into this room? What were you doing? How long did you remain? The rapidity with which the answers are given indicate the rapidity of brain action.

All these things show that it is of the utmost importance that the nervous system should be kept in tone. Otherwise, every part of the body languishes.

This condition indicates the use of Celerina (Rio) in teaspoonful doses four times a day, *to increase the nerve capital of your patient.*

ESTABLISHED 1855.

DRS. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated, with cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in Winter, tobogganning, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families.

For further information, address,

DRS. S. S. & S. E. STRONG.

SESSIONS OF 1891—92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

College of Physicians and Surgeons

OF CHICAGO.

One of the Largest, Finest and Best Arranged College Buildings in this country. Heated by Steam throughout, and perfectly lighted and ventilated.

Clinical Advantages Unsurpassed.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{16}$ gr.), Atropiæ Sulph. ($\frac{1}{250}$ gr.), Codeia ($\frac{1}{50}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{50}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

PHILADELPHIA.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

COLDEN'S LIQUID BEEF TONIC

AN INVALUABLE AID IN MEDICAL PRACTICE.

ORIGINAL | COLDEN'S LIEBIG'S LIQUID EXTRACT OF BEEF AND TONIC INVIGORATOR. | LABEL.

ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS. UNIVERSALLY ENDORSED BY LEADING PHYSICIANS.

This preparation, consisting of the Extract of Beef (prepared by Baron Liebig's process), the best Brandy obtainable, soluble Citrate of Iron, Cinchona and Gentian is offered to the Medical Profession upon its own merits. It is of inestimable value in the treatment of **Debility, Convalescence from Severe Illness Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Nervous Weakness,** and maladies requiring a Tonic and Nutrient. It is quickly absorbed by the Stomach and upper portion of the Alimentary Canal, and therefore finds its way into the circulation quite rapidly.

COLDEN'S LIQUID BEEF TONIC appeals to the judgment of intelligent Physicians in the treatment of

ALL CASES OF GENERAL DEBILITY.

By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of Soluble Citrate of Iron, and which is designated on the label, "**With Iron, No. 1;**" while the same preparation, **Without Iron,** is designated on the label as "**No. 2.**"

In prescribing this preparation, physicians should be particular to mention "*COLDEN'S,*" viz., "*Ext. Carnis Fl. Comp. (Colden).*" A Sample of **COLDEN'S BEEF TONIC** will be sent free on application, to any physician (enclosing business card) in the United States. ***Sold by druggists generally.***

CH. MARCHAND'S
PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. Is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . 1 gr.
Ferri Valerianat, ... 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"*Editor Medical Brief, St. Louis, Mo.:*

"*The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.*

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(*M. ft. pil. No. 20. Sig. One, three times a day.*)

"*The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.*

"*Please try them and report. Your success will be sure.*

"*S. A. DE FOE, M. D.,*
"*Washington, N. Y.*"

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

When this pill was first introduced by us some time since, the interest of the Medical Profession throughout our country was aroused to such an extent as to create a demand which for a time we found it difficult to supply. The demand has continued, thus indicating the popularity and efficiency of this formula.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa,
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College, Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

PLACENTA PRAEVIA,

Treatment by Ergotole.

In a case of Placenta Praevia with terrific flooding, when the Fluid Extract of Ergot could not be retained by the stomach, "Ergotole"—a most concentrated and efficient preparation of Ergot, manufactured by Sharp & Dohme of Baltimore, Md.—was used with the greatest satisfaction, and I am particularly pleased with it. I administered ten minims hypodermically and it acted magically. I think that the Profession should be made acquainted with its valuable properties, as I consider it the duty of every Physician to do all in his power to make known a remedy which he has seen save human lives, as the "Ergotole" certainly did in this frightful case of flooding. I have used it in other cases when the Fluid Extract could not be retained on the stomach, and I regard it a most valuable addition to the science of Therapeutics.

I think no Physician should be without "Ergotole;" it is the most satisfactory preparation I have over used in a practice of more than forty-two years.

WM. E. WYSHAM, M. D.,

Catonsville, Baltimore Co., Md.

SHARP & DOHME, BALTIMORE, MD.

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free. Address, giving both Post and Express Offices.

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

CASWELL, MASSEY & CO.'S

QUININE CHOCOLATES

(REGISTERED IN U. S. PATENT OFFICE).

The chocolate used in the preparation of these tablets disguises the bitter taste of the Quinine without, in the least, impairing its therapeutic value. They are suitable in the entire range of conditions where Quinine is indicated, but are especially recommended in the sub-acute and chronic forms of malaria, characterized by headache, neuralgia, loss of appetite, and general *malaise*. They are quite palatable to children, and for this reason, will be found invaluable in entero-colitis, and other Spring and summer complaints; or, as a restorative tonic in all cases of debility. The Chocolates are unequaled as an elegant and reliable prophylactic for persons residing in, or passing through, malarial districts. Each tablet contains one grain of tannate of Quinine; the dose, therefore, ranges from one or two daily, to a dozen or more, repeated as often as necessary, according to circumstances, or as directed by physician.

CASWELL, MASSEY & CO.,

CHEMISTS AND DRUGGISTS,

(ESTABLISHED A. D. 1780).

LASSAR'S TREATMENT FOR BALDNESS.

"Shampoo the head thoroughly for ten minutes with Packer's tar soap. Wash out the lather with plenty of warm water followed by cold water. Dry the hair and apply:

By Lassar's Treatment and a half-cake of Packer's Tar Soap will be mailed to any Physician on receipt of four stamps. Address

THE PACKER MFG. CO., 100 FULTON ST., NEW YORK.

"The whole process is said to take about fifteen minutes, and to be very agreeable. Let me stimulate you to try this plan of treatment by telling you that I have seen it cause the scalp of one physician to take on a revigorated growth of hair."—GEORGE THOMAS JACKSON, M. D., *Chief of Dermatological Clinic, College of Phys. and Surg., New York, etc.* (*Gaillard's Med. Jour., May, 1890*).

DREAMLESS SLEEP.

About eighteen months ago a friend of mine from America told me of the wonderful effects of a medicine, much used in the States, called BROMIDIA, which is a combination of Chloral, Bromide Potass, Cannabis Indica and Hyoscyamus. I obtained some, and have ordered it regularly for over a year; and have found it excellent in the pain of rheumatism, pneumonia and cancer; also in the sleeplessness of scarlatina and alcoholism. It has never failed me in procuring sleep, without the disagreeable dreams and after effects of opium. The dose is ℥ss. to ℥j. every hour till sleep is produced. I have also found it of much service in cases of tonsilitis, used as a gargle with glycerine and carbolic acid. Extract from recent article in *Edinburg Med. Journal,* Vol. XXXI., No. X., by

J. LINDSAY PORTEOUS,

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE.

IS A MILD FERRUGINOUS PREPARATION CONTAINING 1/60 OF METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

DR. GUTTMAN, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

DR. KNY, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

GASTRIC DERANGEMENTS.

HORSFORD'S ACID PHOSPHATE.

Unlike all other forms of phosphorus in combination, such as dilute phosphoric acid, glacial phosphoric acid, neutral phosphate of lime, hypophosphites, etc., the phosphates in this product are in solution, and readily assimilative by the system, and it not only causes no trouble with the digestive organs, but promotes in a marked degree their healthful action.

In certain forms of dyspepsia it acts as a specific.

Dr. H. R. MERVILLE, Milwaukee, Wis., says: "I regard it as valuable in the treatment of gastric derangements affecting digestion."

Send for descriptive circular. Physicians who wish to test it will be furnished a bottle on application, without expense, except express charges.

Prepared under the direction of Prof. E. N. HORSFORD, by the

Rumford Chemical Works, Providence, R. I.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

Londonderry SPRING Lithia WATER

The Most Powerful Solvent of Uric Acid Known to the Profession.

USED AND PRESCRIBED BY ALL THE LEADING PHYSICIANS THROUGHOUT THE UNITED STATES AND EUROPE.

Transactions of the Fourth Annual Meeting of the American Climatological Association, held in the City of Baltimore, May, 31st and June 1st, 1887. Baltimore; Printed by the Association, 1887.

The Classification of American Waters.

BY A. C. PEALE, M. D., *Consulting Chemist, United States Geological Survey.*

There is a fashion in Mineral Waters as in most other things. *Sulpho-Carbonated* waters promise to come to the front in the near future, and at the present time Lithia Waters occupy a prominent place. I know of but one Lithia water, however, in which the analysis shows enough Lithia proportionally to entitle it to a distinct and separate place on every scheme of classification; that one is from the *Londonderry Lithia Spring of New Hampshire.*

FRANK BILLINGS, M. D., *Professor of Clinical Medicine and Clinical Diagnosis. Professor of Physical Diagnosis and Clinical Medicine, Chicago Medical College.*

Londonderry Lithia Spring Water Co. CHICAGO, ILLS., April 18th, 1889.

Gentlemen: I have used the *Londonderry Lithia Spring Water* in many cases of chronic Gastroduodenitis, with marked relief tothe consequent "Lithæmia," Myalgia, Neuralgia, etc. It is a splendid diluent, and is so pleasant that patients will take it in large quantities. A necessary thing when indicated.

Very respectfully, FRANK BILLINGS, M. D.

From E. E. DENNISON, M. D., *Surgeon R. C. S. Edinboro, Scot., Licentiate College of Pharmacy, Ire.; Intern and Licentiate of Midwifery, Rotunda, Ire.; Surgeon Provincial Fever Hospital.*

"I have personally tried and tested the *Londonderry Lithia Spring Water* for the relief of a *chronic rheumatism* that has annoyed me for years, and can most heartily indorse it and recommend its continued use to that large class of patients afflicted with the manifold and varied aches developed by the presenceof *uric acid* in the blood. Without compromising in any degree the nutritive functions or their harmony with the rest of the organic system, it seems to neutralize the poison in the blood, which is the germ of the mischief and the suffering. Every physician should know this water and take it into his confidence."

NORTHAMPTON, JUNE, 1883.

HENRY M. FIELD, M. D., *Professor Therapeutics, Dartmouth Med. School, etc.*

Londonderry Lithia Spring Water Co. NEWTON, MASS., Nov. 20, 1889.

Gentlemen: I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the value and virtues of your Lithia water. Some way, as I believe, for a general practitioner, I have seen an exceptionally large number of cases of that most tormenting affection, the slow and halting passage of a renal calculus from kidney to bladder. The tortured patient does not wish a repetition of such agony; the competent physician ought, pretty surely, to protect him from such repetition. Since my attention was first called to your Lithia water—several years ago—and I became satisfied respecting its pre-eminent power, I *have used no other Lithia water*, and in the cases just characterized I depend upon the *Londonderry* invariably and often as a last resource. Thus far it has rendered so good an account of itself that I feel bound to make the account, which I render good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter.

Yours truthfully, HENRY M. FIELD, M. D.

SELLING AGENTS.

DÉVIATION DES RÈGLES.

ALETRIS CORDIAL (Rio) is, perhaps, the most important remedial agent yet known. It is *the* remedy for the wrongs of menstruation, by restoring normal functional activity to the uterine apparatus. Prolapsus, Menorrhagia, Leucorrhea, Amenorrhea, Dysmenorrhea, Subinvolution, Metritis, Ovarian Neuralgia, etc., all yield to its beneficial influence. Physicians find a certainty in its action as a uterine tonic, that is peculiar to no other remedy. A special indication for its use

IS THE DRAGGING SENSATION

in the lower bowels. It quickly restores the strength and waning vitality of the chlorotic girls and pregnant women. Habitual miscarriage and the excessive nausea of early pregnancy are effectually prevented by its timely and continued use. In a word, it restores tone to the uterine system, and thus relieves all abnormal conditions.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS **is not a new preparation,** but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & Co.'s. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10.50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.
Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 810 Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

FOR SALE OR EXCHANGE.

PRACTICE, worth from $10,000 to $12,000 for $2,000 Cash. Or with

RESIDENCE, costing to build, over $16,000 will exchange for other property, and suitable location for special practice. This is located in one of the most beautiful and prosperous cities of Kansas, which has six railroads, water-works, gas, Electric-Lights, Electric Street-railway, wholesale and manufacturing interests, Colleges, Schools, Churches and Society all first-class. Will bear full investigation. Do not answer unless you mean business and have the money, ability and push necessary to secure this practice and to succeed to success. To the right kind of a man this opportunity will bring a fortune.

THE PERFECTION DOUCHE.

Compared with other kinds of receivers and bed pans the perfection Douche provides the **most convenient apparatus extant, for the thorough and prolonged application of hot water** in the treatment of uterine and pelvic diseases. Prices, descriptive circulars and testimonials furnished on application. Address, "THE PERFECTION, DOUCHE," Box 7, Albany, N. Y., or E. A. Yarnall Co., 1020 Walnut Street, Philadelphia.

THE JEFFERSON MEDICAL COLLEGE
OF PHILADELPHIA.

The 67th Annual Session of the Jefferson Medical College begins October 1st and continues nearly 7 months. Preliminary Lectures will be held from 21st of September.

EACH student is immediately and personally taught in Obstetrics and Gynæcology, Physical Diagnosis, Laryngology, Ophthalmology, Medical Chemistry, Pharmacy, Materia Medica, and Experimental Therapeutics, Anatomy, Histology and Experimental Physiology, Minor Surgery, Bandaging, Operations on the Cadaver, Pathology, Neurology, and Electro-Therapeutics.

Three annual regular sessions are required. Bedside instruction in Medicine, Gynæcology, Surgery and Obstetrics is a part of the third year course. No extra fee.

The **Annual Announcement** will be sent on application to **J. W. HOLLAND, M. D., Dean.**

MEDICO-CHIRURGICAL COLLEGE
OF PHILADELPHIA.

WINTER SESSION will begin October 1st, and continue until May. PRELIMINARY SESSION begins September 7th.

The curriculum is graded, and a preliminary examination and three Annual Winter Sessions are required. Practical laboratory instruction in Chemistry, Histology, Pathology, Hygiene, Bacteriology, Physiology, with Bedside instruction in Medicine, Surgery and Gynecology is a part of the regular course. Special clinical facilities.

Fees: Matriculation $5.00. First and second years, each $75.00. Third year $100.00. Fourth year free to those in attendance three sessions; to all others $100.00.

For announcement or information apply to

CH. MARCHAND'S
PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. Is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS. Laboratory, 10 West Fourth Street, New York.

SVAPNIA

OR

PURIFIED OPIUM

☞ **FOR PHYSICIANS USE ONLY.** ☜

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BLAUD

Dr. J. FEHR'S

"COMPOUND TALCUM" * * * * "BABY POWDER,"

THE

"HYGIENIC DERMAL POWDER"

FOR

INFANTS AND ADULTS.

Introduced to the Medical and the Pharmaceutical professions by J. FEHR, in the year 1873.

COMPOSITION:—Silicate of Magnesia with Carbolic and Salicylic Acids.

PROPERTIES:—Antiseptic, Antizymotic, and Disinfectant.

Useful as a **GENERAL SPRINKLING POWDER,** with positive Hygienic, Prophylactic, and Therapeutic properties.

GOOD IN ALL AFFECTIONS OF THE SKIN.

PER BOX, PLAIN, 25 Cents; PERFUMED, 50 Cents.
PER DOZ., PLAIN, $1.75; PERFUMED, $3.50.

SOLD BY THE DRUG TRADE GENERALLY.

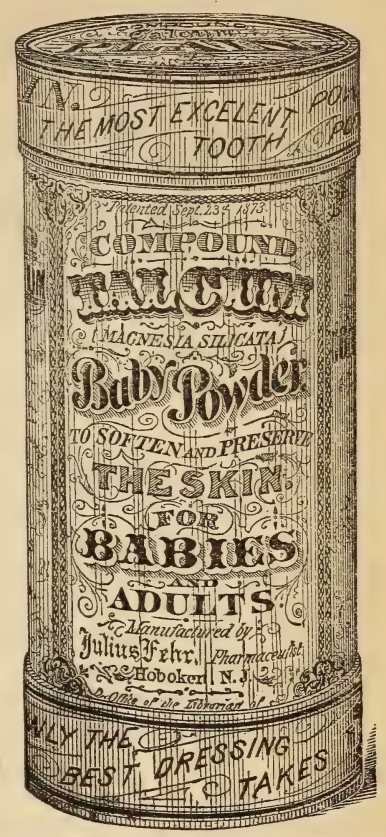
Ancient Pharmacist, **HOBOKEN, N. J.**

Only advertised in Medical and Pharmaceutical prints.



LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

Thirteenth & Walnut Streets——Nineteenth & Arch Streets,

PHILADELPHIA.

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

Do not fail to read our Proposition at the bottom of page.*

THE MOST PERFECT ARTIFICIAL INFANT FOOD.

It goes without saying that a child, to be perfectly nourished, should be fed on healthy human milk, or its equivalent, during the nursing period, or at least until seven months of ago. If a child under seven months of age **MUST** be **ARTIFICIALLY NOURISHED,**

LACTO-PREPARATA

is the only Food which meets every requirement, as it is the only perfect **ARTIFICIAL HUMAN MILK** ever produced; when dissolved in luke-warm water it practically resembles human milk in *composition, character,* and *taste.*

It is made from pure cow's milk, contains no cereals in any form, and is treated according to the directions of **PROF. ATTFIELD FOR STERILIZING MILK.**

LACTO-PREPARATA and **CARNRICK'S FOOD** are put up in air-tight cans **ONLY** and will keep perfectly.

CARNRICK'S FOOD

is composed of two-thirds of **LACTO-PREPARATA,** and one-third of dextrinized wheat, and is more especially intended for children from seven months to two years of age.

A PROPOSITION TO ANY PHYSICIAN.

* The flesh of all children fed ***alone*** on ***LACTO-PREPARATA*** or ***CARNRICK'S FOOD*** is ***firm*** and ***solid,*** because they contain the requisite amount of ***albuminoid constituents.***

The flesh of all children fed alone on any other Milk Foods (containing as they do 90 to 94 per cent. of cereals), is soft and flabby, because they do not contain sufficient nitrogenous elements, and the children thus nourished will in consequence quickly collapse when attacked with any serious complaint.

We respectfully request Physicians who are prescribing these Foods to examine the flesh of the Infants and verify our statements.

We are so confident that our Foods are practically perfect as substitutes for healthy human milk that we will furnish gratis to any Physician who is now prescribing other Foods or cow's milk, sufficient of our preparations to enable him to judge of their dietetic value in perfect nourishing qualities, as compared with other foods for similar purposes.

REED & CARNRICK, MANUFACTURING CHEMISTS,
NEW YORK.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known. It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well-known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, "Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

The Missouri Pacific R'y Co.,

S. W. JENKINS, *Dep't Purveyor, St. Louis, Mo.*

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEEF CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry

PREPARED BY

THE ALE & BEEF COMPANY,

DAYTON, OHIO, U. S. A.

Two full-sized bottles will be sent FREE to any physician who will pay express charges.

SYR. HYPOPHOS. CO., FELLOWS

Contains the Essential Elements of the Animal Organization—Potash and Lime;

The Oxidizing Agents—Iron and Manganese;

The Tonics—Quinine and Strychnine;

And the Vitalizing Constituent—Phosphorus; the whole combined in the form of a Syrup with a **Slightly Alkaline Reaction.**

It Differs in its Effects from all Analogous Preparations; and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

It has Gained a Wide Reputation, particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

Its Curative Power is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

Its Action is Prompt; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections.* From the fact, also, that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, ***finds that no two of them are identical,*** and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, ***in the property of retaining the strychnine in solution,*** and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. ***Fellows.***"

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

Medical Letters may be addressed to:

Mr. FELLOWS, 48 Vesey Street, New York.

New and Old Cures for Consumption.

Many plausible theories of pathology and promising systems of cure arise from time to time to excite the hopes of those afflicted with that dread disease, consumption.

Within the past few years we have seen several such systems run their course of popular enthusiam, professional encouragement, through test and ultimate failure. The best that any exclusively germicidal treatment can do, if successful at all, is to destroy the germs, or dislodge the germ-bearing tissues, and leave the patient in his original condition, modified by the destructive lesions which have already taken place.

But especially must it be borne in mind that the new method of treatment put forth by Prof. Koch, is, confessedly, not applicable to the vast majority of consumptive cases, where the disease has already made considerable advance, but only to those that are in the incipient stages. It is also contra-indicated in cases of tuberculosis of the meninges, brain, larynx and other confined localities or narrow passages, where the hyperemia induced and the necrosed tissues will give rise to serious and generally fatal disturbances.

Even with the best of germicidal treatments, then, in pulmonary phthisis, the reconstructive measures will still be needed to aid in the process of repair. In fact, without them the patient would be left peculiarly pre-disposed to immediate re-infection with the disease. It is, then, safe to predict that no method of treating pulmonary consumption will ever be devised, however radical in its nature, which will supersede the well-known hygienic and reconstructive measures.

The reason for this is plain to every thinking man. Even before the patient was infected at all, before any anatomical lesion existed in the tissues, at an unguarded time of lowered vitality, the germs of disease made a successful lodgment, and the destructive process commenced.

Now, it is a well-established fact that the chief of all reconstructive remedies is the combined hypophosphites of lime and soda—*and this very remedy has long been in successful use in the treatment of consumption.* It is of equal value as a prophylactic in those cases that are constitutionally predisposed to the disease, and as a curative agent in the incipient and even somewhat advanced stages. It alone has proven to be more successful in curing pulmonary tuberculosis than the Koch method, and without any of its dangers and complications. It accomplishes its work gradually and insensibly, replacing new tissues, cell by cell, for the broken-down, diseased tissues as they are removed in a true physiological process by the absorbent powers of the system. In this there is no sudden "reaction" or violent process, removing large and dangerous sloughs, leaving the patient prostrated by the shock, and the adjacent healthy tissues raw and exposed, liable to receive the disease germs anew, and to disseminate them throughout the system more rapidly than before.

So, then, whether any of the germicidal treatments be ultimately successful in removing the cause of the disease or not, the hypophosphites of lime and soda will still be a necessity in the armamentarium against consumption. As a specific curative agent, it will outlive them all.

But it is of the utmost importance that you assure yourself of the chemical purity of the preparation of the Hypophosphites which you use, as it is peculiarly liable to deterioration unless properly prepared. The McArthur Hypophosphite Co., Botton, Mass., will send you valuable information upon the treatment of consumption, if you so request.

ARISTOL.

While possessing all of the virtues of iodoform, and many properties not claimed for the latter **ARISTOL** has **NO TOXIC INFLUENCE AND NO DISAGREEABLE ODOR.**

The efficacy of **ARISTOL** has been widely tested by physicians and surgeons. As a simple dressing it now **HEADS THE LIST OF LOCAL REMEDIAL AGENTS**, and the results obtained in the **GREAT VARIETY OF MORBID LESIONS** for which it has been employed, have been wholly satisfactory.

ARISTOL has been widely commended for its special adaptability to all surgical and pharmaceutical requirements. It may be used in the form of **OINTMENTS, CRAYONS, SUPPOSITORIES, BALLS, OILS, SPRAYS, COLLODIONS, POWDERS, PLASTERS, Etc.**, while it is equally suitable for **TAMPONS, BANDAGES, GAUZE**, and other topical appliances. Used as a powder, it forms **AN IMPERVIOUS ANTISEPTIC COATING**, which gives it an exceptional value in **ULCERATIONS, BURNS, Etc.**

ARISTOL has been used with unqualified satisfaction by able and experienced clinicians in **DERMATOLOGY, SYPHILOLOGY, GYNÆCOLOGY, OPHTHALMOLOGY, Etc.**, and in all of those diatheses in whose course such lesions supervene as call for **ACTIVE, LOCAL MEDICATION.**

ARISTOL is demonstrated to possess **EXCEPTIONAL EFFICACY AS A CICATRISANT.** In **ULCERATIONS**, of whatever character they may be, in **BURNS**, and in **ALL OPEN LESIONS**, the efficacy of **ARISTOL** cannot be overestimated.

Hence its great value in the **DERMATOSES**, the **SOLUTIONS OF CONTINUITY** dependent upon **PHTHISIS, SCROFULOSIS, SYPHILIS, VARIX** and accessible **TRAUMATISMS**, and in the **SUPPURATIVE LESIONS** following many inflammations. Its value in **BURNS**, as in all the operations of **MINOR SURGERY**, is exceptional, while in **DENTAL SURGERY** it has given very valuable results.

Applied to the **MUCOUS SURFACES** of the **NATURAL CAVITIES**, in such conditions as **PHARINGITIS, RHINITIS, OTITIS METRITIS, URETHRITIS**, etc., etc., **ARISTOL** gives the same excellent effects as in tissue lesions.

☞Physicians are respectfulty requested to test for themselves the accuracy of these statements, while reading in our pamphlet of the results obtained by others. *Pamphlet mailed to applicants.*

The preparation of **ARISTOL**, theoretically simple, involves the greatest care and experience, and the word "**ARISTOL**" is the registered property of *The Farbenfabriken, vormals Friedr. Bayer & Co., in Elberfeld.* In order, therefore, to secure the desired effect of **ARISTOL**, it is important that the physician be certain that the article used bears the name of these manufacturers, together with the name of W. H. SCHIEFFELIN & Co.

PHENACETINE-BAYER.

PHENACETINE-BAYER is a **ANTIPYRETIC** and **ANALGESIC**, whose **CERTAINTY OF ACTION** and **ABSOLUTE FREEDOM FROM TOXIC EFFECTS** has won for it the unqualified approval of practitioners.

PHENACETINE-BAYER is indicated in all **ACUTE, INFLAMMATORY FEVERS.** In **TYPHOID FEVER** it has given most satisfactory results, as in **ALL** of **THE EXANTHEMATA.**

PHENACETINE-BAYER is a powerful **ANTI-RHEUMATIC** and **ANTI-NEURALGIC.** It is one of the best and safest remedies for **MIGRAINE**, and gives excellent results in many forms of **INSOMNIA.**

PHENACETINE-BAYER has a very decided influence in **BRONCHITIS** and the **FEVERS OF PHTHISIS**, while in many acute respiratory conditions, such as **WHOOPING-COUGH**, etc., it acts almost as a specific.

In **INFLUENZA**, in the febrile, catarrhal or nervous forms of that condition, or when these forms are combined, **IT HAS GIVEN BETTER RESULTS THAN ANY REMEDY HITHERTO USED.**

PHENACETINE HAS THE ADVANTAGE OVER ALL THE FEBRIFUGES THAT IT ACTS PROMPTLY.

PHENACETINE-BAYER, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld is supplied by us in ounces.

We prepare pills and tablets of **PHENACETINE-BAYER**, containing 2, 3, 4 and 5 grains each.

☞*Pamphlets Mailed on Application.*

SULFONAL-BAYER.

As a **HYPNOTIC**, the first place in modern therapeutics must be given to **SULFONAL-BAYER.**

SULFONAL-BAYER is not alone valuable as a simple **HYPNOTIC.** Its effects as a **TRUE NERVE SEDATIVE** are demonstrated by its gentle, prolonged influence after a normal sedation shall have once been obtained by its employment.

SULFONAL-BAYER is used **IN ALL CASES IN WHICH A HYPNOTIC EFFECT IS DESIRED.** In the **INSOMNIA OF NERVOUS** and **FEBRILE CONDITIONS**, or their sequelæ, and the treatment of the **NEUROTIC MANIFESTATIONS OF THE INSANE**, its value is very pronounced. **SULFONAL** is also employed in **DIABETES**, and, combined with other medicaments, **IN ALL MALADIES IN WHICH NERVOUS INFLUENCES CONSTITUTE A DETERMINING FACTOR.**

☞To obtain the **best effects** of this medicament, **it is necessary to administer it in a manner suited to the nature of its action.** This matter is fully described in our pamphlet, which will be forwarded to any address.

SULFONAL-BAYER, prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, is supplied by us in ounces and in the form of Tables of 5, 10 and 15 grains, put up in bottles of 10 and 100 tablets each.

We also offer **SULFONAL-BAYER** in the form of our soluble pills, containing 5 grains each.

NEW YORK.

CHLORALAMID

SCHERING.

Full Descriptive Pamphlet Mailed to Physicians on request.

The New Hypnotic.

Sole Agents for America, Lehn & Fink, New York.

CHLORALAMID possesses undoubted advantages over other similar new hypnotics, in

Prompt and Quick Effect,
Reliable Action,
Freedom from Evil Side and After-Effect,
Want of Cumulative Influence,
And General Superior Therapeutic Value.

CHLORALAMID has been favorably endorsed by leading practitioners in Europe and America, notably by

Dr. F. H. Williams, Report on Progress in Therapeutics, *Boston Medical and Surgical Journal*, Nov., 1889.
Dr. D. R. Patterson, in London *Lancet*, Oct. 26, 1889.
Dr. W. M. Bailey, A. M., Professor of Materia Medica, Therapeutics, and Public Hygiene, University of Louisville, Ky.
Dr. Hagen and **Dr. Huefler,** Assistants at the Clinic of Prof. Strumpel, at Erlangen, Munich, *Medicinische Wochenschrift*, No. 30, 1889.
Prof. Dr. S. Rabow, of Lausanne-Cery *Centralblatt fur Nervenheilkunde* of Dr. Erlenmeyer, No. 15, 1889.
Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.
Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.
Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.
British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.
Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.
Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.
Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa.
Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College. Denver, Col.
Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)
Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.
Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.
Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.
Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.
Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.
Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

PLACENTA PRAEVIA,

Treatment by Ergotole.

In a case of Placenta Praevia with terrific flooding, when the Fluid Extract of Ergot could not be retained by the stomach, "Ergotole"—a most concentrated and efficient preparation of Ergot, manufactured by Sharp & Dohme of Baltimore, Md.—was used with the greatest satisfaction, and I am particularly pleased with it. I administered ten minims hypodermically and it acted magically. I think that the Profession should be made acquainted with its valuable properties, as I consider it the duty of every Physician to do all in his power to make known a remedy which he has seen save human lives, as the "Ergotole" certainly did in this frightful case of flooding. I have used it in other cases when the Fluid Extract could not be retained on the stomach, and I regard it a most valuable addition to the science of Therapeutics.

I think no Physician should be without "Ergotole;" it is the most satisfactory preparation I have over used in a practice of more than forty-two years.

Platt's Chlorides,

The True Disinfectant.

Eleven years of practical daily use, by tens of thousands of intelligent physicians, and by hundreds of thousands of careful housekeepers, has established beyond doubt the value, the usefulness, and the superiority of Platt's Chlorides.

An odorless liquid, clean, stainless, powerful, efficient, and economical, it is peculiarly adapted to all the sanitary needs of the sick-room, and the hygienic demands of the household.

It is sold in quart bottles only, and by nearly every apothecary in every city, town, or village in the United States. Should there be any practicing physician anywhere who may not as yet personally know its value, a sample with descriptive circulars, etc., will be gladly furnished free. Address, giving both Post and Express Offices.

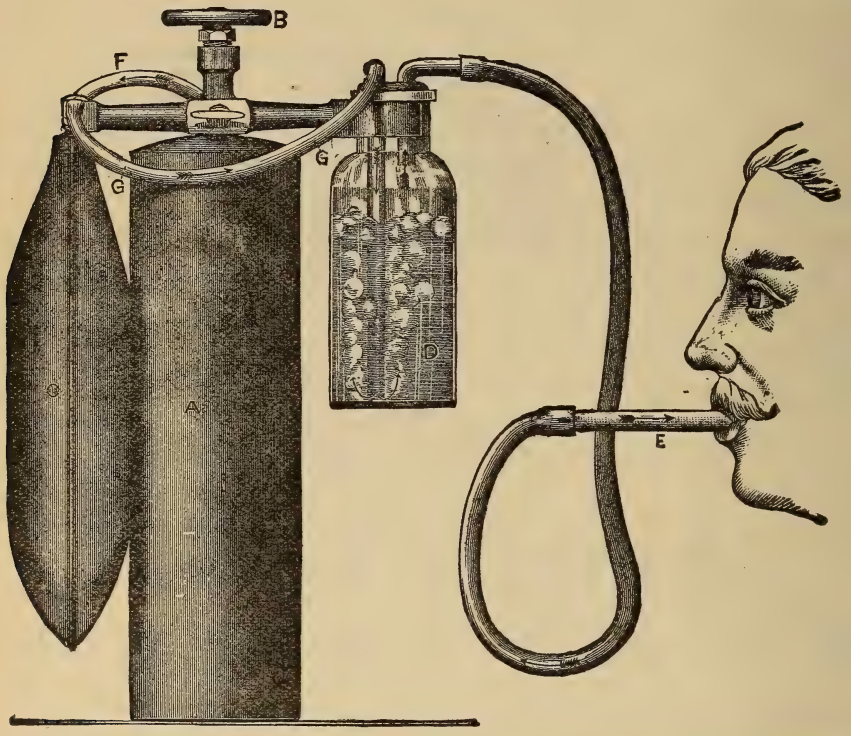
BOSTON, MASS.

INHALATION APPARATUS

FOR

THE THERAPEUTIC ADMINISTRATION OF OXYGEN.



In the treatment of lung troubles by Oxygen its exhibition by inhalation is preferred. The apparatus herewith shown is a modification of the Nitrous Oxide apparatus which we have supplied for many years. It is made in the best manner throughout, and is the outcome of years of experience in the manufacture of gas apparatus. It will be found to meet all the requirements.

We supply the gas in two sizes of cylinders, containing respectively forty and one hundred gallons, either pure Oxygen, or a mixture of Oxygen and Nitrous Oxide in definite proportions of 20 per cent., and forty per cent. of Nitrous Oxide.

Whether pure or mixed the gas is sold at the uniform price of 5 cents a gallon. The cost of the cylinders will be refunded on their return empty with the valves in good condition. Full description of Inhalation and Enema apparatuses with directions for use accompany each apparatus, or will be supplied on application.

PRICES.

Inhalation Apparatus	$5.00
Cylinder, 40 gallons' capacity	6.00
40 gallons Gas, either pure Oxygen or mixed Oxygen and Nitrous Oxide	2.00
Complete Apparatus, Cylinder, and 40 gallons Gas	$13.00
Inhalation Apparatus	$5.00
Cylinder, 100 gallons' capacity	15.00
100 gallons Gas, either pure or mixed	5.00
Complete Apparatus, Cylinder, and 100 gallons Gas	$25.00

ANTIKAMNIA CHEMICAL COMPANY, ST. LOUIS, MO.

DREAMLESS SLEEP.

About eighteen months ago a friend of mine from America told me of the wonderful effects of a medicine, much used in the States, called BROMIDIA, which is a combination of Chloral, Bromide Potass, Cannabis Indica and Hyoscyamus. I obtained some, and have ordered it regularly for over a year; and have found it excellent in the pain of rheumatism, pneumonia and cancer; also in the sleeplessness of scarlatina and alcoholism. It has never failed me in procuring sleep, without the disagreeable dreams and after effects of opium. The dose is ℥ss. to ℥j. every hour till sleep is produced. I have also found it of much service in cases of tonsilitis, used as a gargle with glycerine and carbolic acid. Extract from recent article in *Edinburg Med. Journal*, Vol. XXXI., No. X., by

J. LINDSAY PORTEOUS,

Radlauer's **SAL-BROMALIDE** "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

Is a mild ferruginous preparation containing 3 per cent. Metallic Iron.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

This preparation does not blacken the teeth.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

POLIBOSKOS

Greek {Polus - much / Boskos - nourishing

THE APOLLINARIS COMPANY, LIMITED, London, beg to announce that, as numerous APERIENT WATERS are offered to the public under names of which the word "Hunyadi" forms part, they have now adopted an additional Label comprising their Registered Trade Mark of selection, which consists of

A RED DIAMOND.

This Label will henceforth also serve to distinguish the HUNGARIAN APERIENT WATER SOLD BY THE COMPANY from all other Aperient Waters.

DEMAND THE 
DIAMOND MARK.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

PULMONARY

CONSUMPTION

(THE TREATMENT BY THE SHURLY-GIBBES METHOD.)

THE experiments and results, obtained by Heneage Gibbes, M. D., Professor of Pathology, Michigan University, and E. L. Shurly, M. D., Professor of Clinical Medicine and Laryngology at the Detroit College of Medicine, in the treatment of Pulmonary Consumption with solutions of chemically pure iodine and chloride of gold and sodium are already well known to the Medical Profession.

It is not claiming too much for this method to state that the results from its employment have been far more promising than those obtained from tuberculin, or from any method for the treatment of pulmonary consumption hitherto attempted.

It gives us much pleasure therefore to announce that we are now prepared to supply the necessary solutions in any quantity desired (with the endorsement of Drs. Shurly and Gibbes), and to guarantee their purity and uniform quality.

Reprints of recorded methods of using these solutions, with clinical reports, will be mailed physicians on request.

The solutions are put up in one-ounce bottles. Price per ounce of each solution, $1.00.

PARKE, DAVIS & CO.,

DETROIT AND NEW YORK.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

Londonderry SPRING Lithia WATER

The Most Powerful Solvent of Uric Acid Known to the Profession.

USED AND PRESCRIBED BY ALL THE LEADING PHYSICIANS THROUGHOUT THE UNITED STATES AND EUROPE.

Transactions of the Fourth Annual Meeting of the American Climatological Association, held in the City of Baltimore, May, 31st and June 1st, 1887. Baltimore; Printed by the Association, 1887.

The Classification of American Waters.

By A. C. PEALE, M. D., *Consulting Chemist, United States Geological Survey.*

There is a fashion in Mineral Waters as in most other things. *Sulpho-Carbonated* waters promise to come to the front in the near future, and at the present time Lithia Waters occupy a prominent place. I know of but one Lithia water, however, in which the analysis shows enough Lithia proportionally to entitle it to a distinct and separate place on every scheme of classification; that one is from the *Londonderry Lithia Spring of New Hampshire.*

FRANK BILLINGS, M. D., *Professor of Clinical Medicine and Clinical Diagnosis. Professor of Physical Diagnosis and Clinical Medicine, Chicago Medical College.*

Londonderry Lithia Spring Water Co. CHICAGO, ILLS., April 18th, 1889.

Gentlemen: I have used the *Londonderry Lithia Spring Water* in many cases of chronic Gastroduodenitis, with marked relief to the consequent "Lithæmia," Myalgia, Neuralgia, etc. It is a splendid diluent, and is so pleasant that patients will take it in large quantities. A necessary thing when indicated.

Very respectfully, FRANK BILLINGS, M. D.

From E. E. DENNISON, M. D., *Surgeon R. C. S. Edinboro, Scot., Licentiate College of Pharmacy, Ire.; Intern and Licentiate of Midwifery, Rotunda, Ire.; Surgeon Provincial Fever Hospital.*

"I have personally tried and tested the *Londonderry Lithia Spring Water* for the relief of a *chronic rheumatism* that has annoyed me for years, and can most heartily indorse it and recommend its continued use to that large class of patients afflicted with the manifold and varied aches developed by the presence of *uric acid* in the blood. Without compromising in any degree the nutritive functions or their harmony with the rest of the organic system, it seems to neutralize the poison in the blood, which is the germ of the mischief and the suffering. Every physician should know this water and take it into his confidence."

NORTHAMPTON, JUNE, 1883.

HENRY M. FIELD, M. D., *Professor Therapeutics, Dartmouth Med. School, etc.*

Londonderry Lithia Spring Water Co. NEWTON, MASS., Nov. 20, 1889.

Gentlemen: I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the value and virtues of your Lithia water. Some way, as I believe, for a general practitioner, I have seen an exceptionally large number of cases of that most tormenting affection, the slow and halting passage of a renal calculus from kidney to bladder. The tortured patient does not wish a repetition of such agony; the competent physician ought, pretty surely, to protect him from such repetition. Since my attention was first called to your Lithia water—several years ago—and I became satisfied respecting its pre-eminent power, I *have used no other Lithia water*, and in the cases just characterized I depend upon the *Londonderry* invariably and often as a last resource. Thus far it has rendered so good an account of itself that I feel bound to make the account, which I render good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter.

Yours truthfully, HENRY M. FIELD, M. D.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One Teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

Where Women have miscarried during previous pregnancies, or in any case where miscarriage is feared, ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used,

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

The above preparations are prepared exclusively for Physicians' Prescriptions, and a sample of each or all of them will be sent to any Physician who wishes to test them, if he will pay the Express Charges.

ESTABLISHED 1855.

DR. STRONG'S SANITARIUM,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for TREATMENT, CHANGE, REST, OR RECREATION.

And places them under well-regulated hygienic conditions so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it has a Sun Parlor and Promenade on the roof. Turkish, Roman, Sulphur, Electro-Thermal, the French Douche, and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet Inhalations of Medicated, Compressed, and Rarefied Air, Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, with elevator, electric bells, open fire-places, steam, and thorough ventilation. With cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in Summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience.

A liberal discount to physicians and their families for board or treatment. For Illustrated Circular, Address:

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 81c Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

SEA SHORE RESORT FOR

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{60}$ gr.), Atropiæ Sulph. ($\frac{1}{100}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

JOHN OGDEN & CO.,

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

GARDNER'S

SYRUP OF HYDRIODIC ACID,

Introduced in 1878 by R. W. GARDNER.

The Reputation which Hydriodic Acid has Attained During the past Eleven Years was Won by this Preparation.

Numerous Imitations prepared differently, and weaker in Iodine, are offered, from the use of which the same therapeutic effects cannot be obtained.

Caution.—Use no Syrup of Hydriodic Acid which has turned red. This shows decomposition and free Iodine. In this state it acts as an irritant and fails to produce desirable results.

Unprincipled apothecaries substitute imitations when Gardner's Syrup is prescribed, and physicians, failing to get desirable and promised results, attribute the fault, unjustly, to Gardner's Syrup.

THERAPEUTIC INDICATIONS.

Hay Fever; Rose Cold; Poisoning by Lead, Mercury or Arsenic; Acute and Chronic Rheumatism; Asthma; Chronic Bronchitis; Catarrh; Congestion of Lungs in Children; Adenitis; Eczema; Lupus; Chronic Malarial Poisoning; Lumbago; Acute Pneumonia; Psoriasis; Scrofulous Diseases; Goitre; Enlarged Glands; Cold Abscesses; Indolent Sores; Excessive Fat; Fatty Degeneration of the Heart; to absorb non-malignant Tumors; and in the latter stages of Syphilis; Syphilitic Phthisis.

Details of treatment furnished physicians upon application to undersigned without charge.

Gardner's Chemically Pure Syrups of Hypophosphites.

Embracing the separate Syrups of Lime, of Soda, of Iron, of Potassa, of Manganese, and an Elixir of the Quinia Salt; enabling physicians to accurately follow Dr. Churchill's method, by which thousands of authenticated cases of Phthisis have been cured. The only salts, however, used by Churchill in Phthisis are those of Lime, of Soda, and of Quinia, and always separately according to indications,—never combined.

The reason for the use of single Salts is because of antagonistic action of the different bases, injurious and pathological action of Iron, Potassa, Manganese, etc., in this disease.

These facts have been demonstrated by thirty years' clinical experience in the treatment of this disease exclusively, by Dr. Churchill, who was the first to apply these remedies in Medical practice. Modified doses are also required in this disease; seven grains during twenty-four hours being the maximum dose in cases of Phthisis, because of increased susceptibility of the patient to their action, the danger of producing toxic symptoms (as hemorrhage, rapid softening of tubercular deposit, etc.), and the necessity that time be allowed the various functions to recuperate simultaneously; over-stimulation, by pushing the remedy, resulting in crisis and disaster.

A pamphlet of sixty-four pages, devoted to a full explanation of these details and others, such as contra-indicated remedies, indications for the use of each hypophosphite, reasons for the use of absolutely pure Salts, protected in Syrup from oxidation, etc., mailed to physicians without charge upon application to

R. W. GARDNER, 158 William St., N. Y. City.

W. H. SCHIEFFELIN & CO., Sole Wholesale Agents, New York.

The only prominent Emulsion of Cod-Liver Oil introduced directly to the medical profession. It is advertised exclusively in medical journals.

HYDROLEINE.

(HYDRATED OIL.)

Produces rapid increase in Flesh and Strength.

FORMULA.—Each Dose contains:			
Pure Cod Liver Oil	30 m. (drops)	Soda	1-3 Grains
Distilled Water	35 "	Salicylic Acid	1-4 "
Soluble Pancreatin	5 Grains.	Hyoscheic Acid	1-20 "

Recommended and Prescribed by EMINENT PHYSICIANS Everywhere. It is pleasant to the Taste and acceptable to the most delicate Stomach.

IT IS ECONOMICAL IN USE AND CERTAIN IN RESULTS.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhuæ, but a hydro-pancreated preparation, containing acids and a small percentage of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used, readily converts the oleaginous material into assimilable matter, a change so necessary to the reparative process in all wasting diseases.

The following are some of the diseases in which HYDROLEINE is indicated:

Phthisis, Tuberculosis, Catarrh, Cough, Scrofula, Chlorosis, General Debility, etc.

TO BRAIN WORKERS of all classes, **HYDROLEINE** is invaluable, supplying as it does, the true brain-food, and being more easily assimilated by the digestive organs than any other emulsion.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," and "Consumption and Wasting Diseases," by two distinguished London physicians, which will be sent free on application.

SOLD BY DRUGGISTS GENERALLY.

C. N. CRITTENTON,

SOLE AGENT FOR THE UNITED STATES. 115 FULTON STREET, N. Y.

A Sample of Hydroleine will be sent free upon application, to any physician (enclosing business card) in the U. S.

PIL. QUINIÆ FERRI ET ZINCI VALERIANAT. "W. H. S. & CO."

{ Quiniæ Valerianat, . . 1 gr.
Ferri Valerianat, . . . 1 gr.
Zinci Valerianat, . . . 1 gr. }

HIGHLY RECOMMENDED FOR MELANCHOLIA AND THE FRETFULNESS AND WORRY OF NERVOUS WOMEN.

This combination of the three Valerianate Salts seems to fill a space in medical therapy which is indeed unique in character. Particularly is it indicated in Melancholia, Epilepsy, and that long chain of diseases which are attributed to the nervous system, and often prove a source of great trouble to the physician.

We append a copy of the original letter of Dr. S. A. De Foe, relating to this formula, viz.:

"*Editor Medical Brief, St. Louis, Mo.:*

"*The family doctor only knows how widespread Melancholia is in our country. The many household cares develop this disease in nervous women, who show its first symptoms in fretfulness and worry. I have sought for a remedy for years for this malady, and have at last found it in the triple valerianates, which work like a charm.*

{ *Zinci Valerianat, ... 20 grs.*
Quiniæ Valerianat, ... 20 grs.
Ferri Valerianat, ... 20 grs. }

"(*M. ft. pil. No. 20. Sig. One, three times a day.*)

"*The drugs must be absolutely pure. The old reliable house of W. H. Schieffelin & Co., of New York, have added the above pills (soluble) to their list, and I have tried them in many cases and I find them a specific for the worry of nervous women, melancholia, and incipient insanity.*

"*Please try them and report. Your success will be sure.*

"*S. A. DE FOE, M. D.,*
"*Washington, N. Y.*"

Dr. Emory Lanphear, *Kansas City Medical Index*, says, This is a well-known formula, but its usefulness in the treatment of "Dysmenorrhœa" is not generally recognized. Aside from mechanical obstruction, there is, perhaps, no cause of painful menstruation so frequent as a depraved condition of the blood, and iron is nearly always indicated. Here the combination of Zinc, Iron and Quinine often affords much assistance in remedying the troublesome symptoms.

We are also in receipt of valuable testimony to the efficacy of our Pil. Quiniæ, Ferri et Zinci Valer. in cases of Epilepsy.

A physician of large practical experience in one of the city hospitals states that he has used the pills in cases of Epilepsy, and obtained very good results. In one case of a chronic nature, better effects were obtained than with anything else used. Other cases of a similar nature have also come under our observation.

We also received a communication from a practitioner who has used them with decided benefit in a severe case of Delirium Tremens. Two pills were given every hour during the night, then one pill every hour during the next day and for three consecutive days following. The result was most encouraging. These facts, with others of a similar nature, indicate that this combination of the triple valerianates can be used with confidence by the profession wherever a nerve sedative is required.

When this pill was first introduced by us some time since, the interest of the Medical Profession throughout our country was aroused to such an extent as to create a demand which for a time we found it difficult to supply. The demand has continued, thus indicating the popularity and efficiency of this formula.

Dr. Ed. Reichmann, Clinic of Prof. Riegel, at Giesen; *Deutsche Medicinische Wochenschrift*, No. 31, 1889.

Dr. M. Rosenthal, resident physician at the Montefiore Home, and visiting physician at the German Dispensary, New York City.

Dr. Louis Bauer, M. R. C. S. Engl., Prof. of Principles and Practice, Clinical and Orthopedic Surgery, Consulting Surgeon to the City and Female Hospitals, Dean of the St. Louis College of Physicians and Surgeons, St. Louis, Mo.

British Medical Association. A special Committee on Therapeutics instructed to examine into comparative action of hypnotics.

Dr. Chas. H. Steele, Prof. of Materia Medica and Therapeutics, Cooper Medical College, San Francisco, Cal.

Dr. W. Hale White, F. R. C. P., Senior Assistant Physician to, and Lecturer on Materica Medica and Therapeutics at Guy's Hospital, London, England.

Dr. John Aulde, late Demonstrator of Clinical Medicine and of Physical Diagnosis in the Medico-Chirurgical College of Philadelphia, Pa,

Dr. T. W. Howell, Prof. of Nervous Diseases in Gross Medical College, Denver, Col.

Dr. Conolly Norman, (*Dublin Journal of Medical Science*, January, 1890)

Dr. Frank L. James, Editor of St. Louis (Mo.) *Medical and Surgical Journal* and of the *National Druggist*.

Dr. William A. Hammond, ex-Surgeon-General of the U. S. Army, Washington, D. C.

Dr. D. S. Moore, Assistant Superintendent at the North Dakota Hospital for the Insane, Jamestown, N. D.

Dr. Chas. L. Dana, Professor of Diseases of the Mind and Nervous System; Physician to Bellevue Hospital; Neurologist to the N. Y. Infant Asylum and the Montefiore Home for Chronic Invalids.

Dr. Chas. E. Denhard, member Academy of Medicine, Medico-Legal Society, N. Y.; Medical Union, Med. Chirug. Society of German Physicians. etc., New York City.

Dr. J. B. Mattison, member of the American Association for the Cure of Inebriates; of the New York Neurological Society; of the Medical Society of the County of Kings, Brooklyn, N. Y., has reported good results with Chloralamid at various times, and especially in an article on "Hypnal," in the New York *Medical Record*, January 3, 1891.

ADMINISTRATION OF CHLORALAMID.

Much depends upon the proper administration of the new hypnotic, Chloralamid, to obtain the full effect and satisfactory and beneficial results. The dose is from 15 to 60 grains, with an average dose of 30 grains. Chloralamid is soluble in about 20 parts of cold water, and in 1½ parts of alcohol.

Never dissolve or dispense chloralamid in hot water or warm solutions, as the heated preparation decomposes.

The best modes of administration are:

1. In a teaspoonful of whiskey or brandy;
2. In properly proportioned solutions with wine, spirits, or spirituous compounds;
3. In a small cup of cold water or cold tea;
4. In powder form, wafers, or cachets, washed down with cold water.

The following formulas have come well recommended and bear the stamp of general approval and adoption:

Dr. W. Hale White (in *British Medical Journal*) says: "I always prescribe it with spirit; 20 grains will dissolve in 1 drachm of rectified spirit in 15 minutes, and water may be added to this solution without reprecipitating the drug. A good way of giving it is to tell the patient to dissolve it in a little brandy, add water to his liking, and drink it shortly before going to bed."

From an editorial in the *Medical Summary*, Philadelphia, we quote:

℞ Chloralamid, ... 4 drachms.
Spts. vini gallici, ... 2 ounces.
Curacao, ... 2 ounces.
M. A tablespoonful (30 grains chloralamid) in water and repeated in four hours if necessary.

Dr. John Aulde suggests:

℞ Chloralamid, ... 4 drachms.
Spts. furmenti, ... 3 ounces.
Elix. aurantii, sufficient to make . . . . . 4 ounces.
M. Take one tablespoonful (30 grains chloralamid) in water.

Another popular prescription, extensively used in New York, is this:

℞ Chloralamid, ... 4 drachms.
Tinct. cardamom. comp., . . 2 ounces.
Elixir simplic., ... 2 ounces.
M. Take a tablespoonful as a dose.

DIOVIBURNIA

UTERINE TONIC, ANTISPASMODIC AND ANODYNE.

A reliable and trustworthy remedy for the relief of Dysmenorrhœa, Amenorrhœa, Menorrhagia Leucorrhœa, Subinvolution, THREATENED ABORTION, Vomiting in Pregnancy and Chlorosis; directing its action to the entire uterine system as a general tonic and antispasmodic.

FORMULA.

Every ounce contains 3-4 dram each of the fluid extracts: Viburnum Prunifolium, Viburnum Opulus, Dioscorea Villosa, Aletris Farinosa, Helonias Dioica, Mitchella Repens, Caulophyllum Thalictroides, Scutellaria Lateriflora. DOSE.—For adults, a desertspoonful to a tablespoonful three times a day, after meals. In urgent cases, where there is much pain, dose may be given every hour or two, ALWAYS IN HOT WATER.

Jno. B. Johnson, M. D., Professor of the Principles and Practice of Medicine, St. Louis Medical College.

ST. LOUIS, June 20, '88.

I very cheerfully give my testimony to the virtues of a combination of vegetable remedies prepared by a well-known and able pharmacist of this city, and known as DIOVIBURNIA, the component parts of which are well known to any and all physicians who desire to know the same, and therefore have no relation to proprietary or quack remedies. I have employed this medicine in cases of dysmonorrhœa, suppression of the catemania and in excessive leucorrhœa, and have been much pleased with its use. I do not think its claims (as set forth in the circular accompanying it) to be at all excessive. I recommend its trial to all who are willing to trust to its efficacy, believing it will give satisfaction. Respectfully,

Jno. B. Johnson

L. Ch. Boisliniere, M. D., Prof. of Obstetrics, St. Louis Medical College. ST. LOUIS, June 18, 1888.

I have given DIOVIBURNIA a fair trial and found it useful as an uterine tonic and antispasmodic, relieving the pains of dysmenorrhœa, and regulator of the uterine functions. I feel authorized to give this recommendation of DIOVIBURNIA, as it is neither a patented nor a secret medicine, the formula of which have been communicated freely to the medical profession.

L Ch. Boisliniere M.D.

H. Tuholske, M. D., Professor Clinical Surgery and Surgical Pathology, Missouri Medical College; also Post-Graduate School of St. Louis. ST. LOUIS, June 23, 1888.

I have used DIOVIBURNIA quite a number of times—sufficiently frequently to satisfy myself of its merits. It is of unquestionable benefit in painful dysmenorrhœa; it possesses antispasmodic properties which seem especially to be exerted on the uterus.

Wm. H. Tuholske

To any physician, unacquainted with the medicinal effect of DIOVIBURNIA, we will mail pamphlet containing full information, suggestions, commendations of some of our most prominent professors and various methods of treatment; also a variety of valuable prescriptions that have been thoroughly tested in an active practice, or to physicians desiring to try our preparation, and who will pay express charges, we will send on application a sample bottle free.

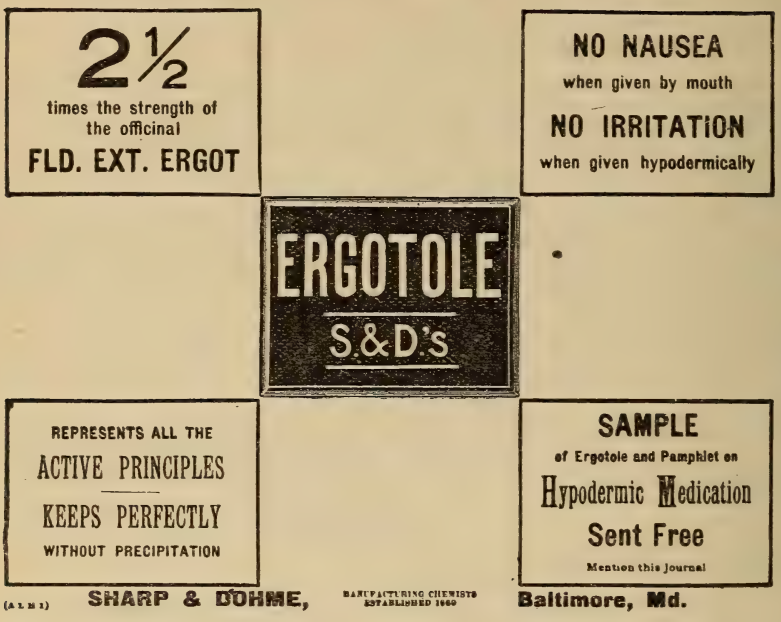
THE MEDICAL AND SURGICAL REPORTER,

P. O. Box 843, Philadelphia, Pa.



PLACENTA PRAEVIA,

Treatment by Ergotole.

In a case of Placenta Praevia with terrific flooding, when the Fluid Extract of Ergot could not be retained by the stomach, "Ergotole"—a most concentrated and efficient preparation of Ergot, manufactured by Sharp & Dohme of Baltimore, Md.—was used with the greatest satisfaction, and I am particularly pleased with it. I administered ten minims hypodermically and it acted magically. I think that the Profession should be made acquainted with its valuable properties, as I consider it the duty of every Physician to do all in his power to make known a remedy which he has seen save human lives, as the "Ergotole" certainly did in this frightful case of flooding. I have used it in other cases when the Fluid Extract could not be retained on the stomach, and I regard it a most valuable addition to the science of Therapeutics.

I think no Physician should be without "Ergotole;" it is the most satisfactory preparation I have over used in a practice of more than forty-two years.

WM. E. WYSHAM, M. D.,

Catonsville, Baltimore Co., Md.

SHARP & DOHME, BALTIMORE, MD.

SCOTT'S EMULSION

VERSUS

PLAIN COD LIVER OIL.

Plain Cod Liver Oil ***is indigestible, deranges the stomach, destroys the appetite is not assimilated,*** and in a majority of cases is detrimental to the patient.

SCOTT'S EMULSION

Can be ***digested in nearly all cases, is assimilated, does not derange the stomach, nor overtax the digestive functions,*** and can be taken for an indefinite period when the plain cod liver oil cannot be tolerated at all, and with most marked results in ***Anæmia, Consumption*** and all wasting conditions. It also contains the ***Hypophosphites of Lime and Soda with Glycerine,*** which are most desirable adjuncts.

WHEN PHYSICIANS TRY IT THEY INVARIABLY USE IT

in preference to the plain cod liver oil or other ***so-called Emulsions*** that invariably separate, and hence their integrity and value is destroyed. ***Scott's Emulsion is palatable and absolutely permanent*** hence its integrity is always preserved.

The formula for SCOTT'S EMULSION is 50 per cent. of the finest Norwegian Cod Liver Oil, 6 grains Hypophosphite of Lime and 3 grains Hypophosphite of Soda to the fluid ounce, Emulsified, or digested to the condition of assimilation with chemically pure Glycerine and Mucilage.

We also wish to call your attention to the following preparations:

CHERRY MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain aud nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula).

Prepared from carefully selected German Buckthorn Bark, Juglans Bark and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science who have employed them.

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BLAUD

LASSAR'S TREATMENT FOR BALDNESS.

"Shampoo the head thoroughly for ten minutes with Packer's tar soap. Wash out the lather with plenty of warm water followed by cold water. Dry the hair and apply:

℞ Lassar's Treatment and a half-cake of Packer's Tar Soap will be mailed to any Physician on receipt of four stamps. Address

THE PACKER MFG. CO., 100 FULTON ST., NEW YORK.

"The whole process is said to take about fifteen minutes, and to be very agreeable. Let me stimulate you to try this plan of treatment by telling you that I have seen it cause the scalp of one physician to take on a revigorated growth of hair."—GEORGE THOMAS JACKSON, M. D., *Chief of Dermatological Clinic, College of Phys. and Surg., New York, etc.* (*Gaillard's Med. Jour., May, 1890*).

ABOUT GAS TREATMENT.

We make and sell oxygen and nitrogen monoxide for therapeutic use, and we guarantee them pure They are put up in compact form. (A cylinder containing 100 gallons of nitrogen monoxide or 40 gallons of oxygen measures 12 inches in length, has a diameter of 3½ inches, and weighs 10½ lbs. A cylinder containing 450 gallons of nitrogen monoxide or 100 gallons of oxygen measures 25 inches in length, has a diameter of 4½ inches, and weighs 34 lbs.)

INSOMNIA. Dr. Allan McLane Hamilton states that nitrogen monoxide, N_2O (nitrous oxide of the old nomenclature) has no equal in the treatment of this difficulty.

MELANCHOLIA. A short course of nitrogen monoxide is said to change the face of nature for such patients.

ANÆMIA. Where iron is not tolerated or proves inefficient, the addition of oxygen or a combination of oxygen and nitrogen monoxide has proven very beneficial.

For those who should, but cannot, go from home for rest or a change of air, or for those who, from any cause fail to get air enough into their lungs, the inhalation of one or other of these gases, or both in combination, promises great benefit. The testimony is that in cases of

ASTHMA, more than fifty per cent. of the cases yield to oxygen treatment, others are very greatly relieved, and a very small per cent. are not improved.

INDIGESTION and CONSTIPATION are said to be greatly relieved and very often conquered by continued treatment.

A highly esteemed New York physician has used more than twenty thousand gallons of nitrogen monoxide in his private practice. The letters received from his patients, largely from those who were afflicted with nervous disorders, are enthusiastic in their testimony as to the benefit received.

Regular practitioners who are using gas treatment testify that when *pure* oxygen and *pure* nitrogen monoxide, or a mixture of these, is used, no therapeutic agents are more uniformly successful when intelligently prescribed.

For descriptive circulars, and term for gas outfits, address

CASWELL, MASSEY & CO.'S

QUININE CHOCOLATES

(REGISTERED IN U. S. PATENT OFFICE).

The chocolate used in the preparation of these tablets disguises the bitter taste of the Quinine without, in the least, impairing its therapeutic value. They are suitable in the entire range of conditions where Quinine is indicated, but are especially recommended in the sub-acute and chronic forms of malaria, characterized by headache, neuralgia, loss of appetite, and general *malaise*. They are quite palatable to children, and for this reason, will be found invaluable in entero-colitis, and other Spring and summer complaints; or, as a restorative tonic in all cases of debility. The Chocolates are unequaled as an elegant and reliable prophylactic for persons residing in, or passing through, malarial districts. Each tablet contains one grain of tannate of Quinine; the dose, therefore, ranges from one or two daily, to a dozen or more, repeated as often as necessary, according to circumstances, or as directed by physician.

WALNUT LODGE HOSPITAL,

HARTFORD, CONN.

Organized in 1880 for the special medical treatment of

ALCOHOL AND OPIUM INEBRIATES.

Elegantly situated in the suburbs of the city, with every appointment and appliance for the treatment of this class of cases, including Turkish, Russian, Roman, Saline and Medicated Baths. Each case comes under the direct personal care of the physician. Experience shows that a large per cent. of these cases are curable, and all are more or less benefited from the application of exact hygienic and scientific measures. This institution is founded on the well-recognized fact that INEBRIETY is a DISEASE, and CURABLE, and all these cases require rest, change of thought and living, in the best surroundings, together with every means known to science and experience to bring about this result. Applications and all inquiries should be addressed

Valuable in Neuralgia, Sciatica, Acute Rheumatism and Typhoid Fever; also Headache and other Neuroses due to Irregularities of Menstruation. Exhibited in Asthma, Hay Fever, Influenza, La Grippe and Allied Complaints, it secures the desired result. ☞Further information and samples sent free on application.

ANTIKAMNIA CHEMICAL COMPANY, ST. LOUIS, MO.

DREAMLESS SLEEP.

About eighteen months ago a friend of mine from America told me of the wonderful effects of a medicine, much used in the States, called BROMIDIA, which is a combination of Chloral, Bromide Potass, Cannabis Indica and Hyoscyamus. I obtained some, and have ordered it regularly for over a year; and have found it excellent in the pain of rheumatism, pneumonia and cancer; also in the sleeplessness of scarlatina and alcoholism. It has never failed me in procuring sleep, without the disagreeable dreams and after effects of opium. The dose is ℥ss. to ℥j. every hour till sleep is produced. I have also found it of much service in cases of tonsilitis, used as a gargle with glycerine and carbolic acid. Extract from recent article in *Edinburg Med. Journal*, Vol. XXXI., No. X., by

J. LINDSAY PORTEOUS,
M. D., F. R. C. S., *Ed.*

Radlauer's SAL-BROMALIDE. "Antinervin."

A NEW AND ACTIVE ANTIPYRETIC.

ACTS QUICKER AND BETTER THAN ANTIPYRIN.

HALF THE DOSE. HALF THE PRICE.

Specially recommended in Neuralgia, Headache, in Fevers, and other febrile conditions, Pneumonia, etc.

NO SWEATING. NO BAD AFTER EFFECTS.

WRITE FOR SAMPLE AND PAMPHLET.

EISNER & MENDELSON CO., Importers and Agents, **New York.**

LEVULOSE FERRIDE

IS A MILD FERRUGINOUS PREPARATION CONTAINING 3% of METALLIC IRON.

It is perfectly soluble and free from any ferrugenous taste.

It is easily assimilated and digested and is substantially a peptonate.

THIS PREPARATION DOES NOT BLACKEN THE TEETH.

EISNER & MENDELSON CO.

Sole Agents. NEW YORK.

RADLAUER'S SOMNAL (Æthylised Chloral-Urethane.)

SOMNAL produces sound sleep within half an hour after its application, lasting generally from six to eight hours.

THE DOSE IS FROM 2 TO 3 GRAMMES (30 TO 40 MINIMS).

IT IS BEST ADMINISTERED WITH WHISKEY OR ESSENCE OF GINGER.

Dr. Guttman, Surg. Director of the City Hospital Moabit, in Berlin, states that he has applied "Somnal" in sixty to seventy cases at the hospital. Doses of two grammes have produced a quiet, refreshing sleep, lasting from six to eight hours, without any unpleasant symptoms following its use.

Somnal *does not disturb the digestion*, has no influence over the pulse or temperature, and, in fact, has the excellent qualities **of both chloral and urethane without their disadvantages.**

Dr. Kny, of Strassburg, prefers *Somnal* to *Sulfonal*, and claims that it produces *deep sleep* **within half an hour after its administration,** and that it has but little influence on the heart's action.

And insist upon receiving the HUNGARIAN APERIENT WATER of the APOLLINARIS COMPANY, LIMITED, London.

A CASE WITH A LESSON IN IT.

We have frequently referred to the necessity of keeping the pregnant woman supplied with those chemical substances which she must give to the child in the formation of its little frame, and the dire effects which may result from a deficiency of those substances. The headaches, neuralgias, spinal tenderness, and some of the many disorders of digestion, and even mental failure, may be all prevented or relieved by supplying to the mother the chemical food her system demands.

We have noticed a few cases where the most serious results have occurred to the mother by such a deficiency, one of which is well worth relating. Mrs. M., aged 30, pregnant with her third child, suffered from the second to the fifth month of her pregnant term with gradually failing strength and health, and nervous irritability. She was very restless nights for three or four days, the peculiar restlessness of complete nervous exhaustion, and was irrational for more than a week.

At this time I advised that she have a teaspoonful of Murdock's Liquid Food every hour in milk, and a little wine every four hours. The third night she had fifteen drops of hydrobromic acid dil. every three or four hours, which was continued for a week. The liquid food after a week every two hours, and all other medicines were discontinued. Her bowels were moved with a mild laxative at first, and afterward became regular. Her tongue cleaned quickly and her skin assumed a more natural appearance.

At this writing, less than three weeks from our first visit, the patient is able to sit up an hour at a time, is quite rational and cheerful, has a good appetite, the bowels are quite regular, there is no headache, and but little spinal tenderness. She sleeps reasonably well if fed frequently. She is allowed to suit her taste in her diet. The child is quite active, and the mother is progressing so nicely that it is hoped that she will pass safely through her confinement, which is nearly at hand. She will be kept on the liquid food and the phosphates until her confinement after which, the condition will suggest the treatment. This is the most marked case of a starved nervous system we have ever seen, and the benefit derived from the treatment proves the theory as to the cause of the trouble.

Apropos with the above, comes the question of the selection of nutritious foods for those many cases which demand strong and immediate nourishment. The food used in the above case has produced marvelous results for us in some of those extreme cases in which we have used it.

In one case of nervous exhaustion the insomnia was absolutely painful. When the exhaustion forced the patient to sleep there was an immediate sense of falling or approaching death, or there were hallucinations which were appalling, rendering the nights unbearable. One teaspoonful of Murdock's Liquid Food so nourished the system the first night it was given that the patient sank into a quiet, refreshing sleep which lasted, with a single awakening, until morning, and the improvement the patient obtained was most striking.

One case of mitral regurgitation with leucocythemia and nervous exhaustion improved more rapidly on this food than on all other measures combined. In cases of nervous exhaustion and brain tire, its effects are most marked, as we have experienced many times in the past five years in the frequent personal use of the agent. It contains the principles of pure, healthy blood and nerve tissue ready for immediate assimilation. Fourteen per cent. of the entire quantity is uncoagulated albumen, as we have demonstrated by actual analysis.

We have tided babies over critical periods often with a few drops in its usual diet. We have given it to dipsomaniacs with or without non-alcoholic stimulants with superb results. The sole objection our patients have to it is its odor. Its taste is not disagreeable; it has the odor and appearance of blood. All objections are soon forgotten, however, in the results of its action upon the nutrition of the system, and the patient soon learns to like it, and often craves for it, drinking it from the bottle or a glass readily, like any beverage. It ought to be the food par-excellence for rapid appropriation in all conditions of exhaustion.

P. S.—Phosphates act well with the Liquid Food.

Editorial of the Chicago *Medical Times*, June, 1890.

Londonderry SPRING Lithia WATER

The Most Powerful Solvent of Uric Acid Known to the Profession.

USED AND PRESCRIBED BY ALL THE LEADING PHYSICIANS THROUGHOUT THE UNITED STATES AND EUROPE.

Transactions of the Fourth Annual Meeting of the American Climatological Association, held in the City of Baltimore, May, 31st and June 1st, 1887. Baltimore; Printed by the Association, 1887.

The Classification of American Waters.

By A. C. PEALE, M. D., *Consulting Chemist, United States Geological Survey.*

There is a fashion in Mineral Waters as in most other things. *Sulpho-Carbonated* waters promise to come to the front in the near future, and at the present time Lithia Waters occupy a prominent place. I know of but one Lithia water, however, in which the analysis shows enough Lithia proportionally to entitle it to a distinct and separate place on every scheme of classification; that one is from the *Londonderry Lithia Spring of New Hampshire.*

FRANK BILLINGS, M. D., *Professor of Clinical Medicine and Clinical Diagnosis. Professor of Physical Diagnosis and Clinical Medicine, Chicago Medical College.*

Londonderry Lithia Spring Water Co. CHICAGO, ILLS., April 18th, 1889.

Gentlemen: I have used the *Londonderry Lithia Spring Water* in many cases of chronic Gastroduodenitis, with marked relief tothe consequent "Lithæmia," Myalgia, Neuralgia, etc. It is a splendid diluent, and is so pleasant that patients will take it in large quantities. A necessary thing when indicated.

Very respectfully, FRANK BILLINGS, M. D.

From E. E. DENNISON, M. D., *Surgeon R. C. S. Edinboro, Scot., Licentiate College of Pharmacy, Ire.; Intern and Licentiate of Midwifery, Rotunda, Ire.; Surgeon Provincial Fever Hospital.*

"I have personally tried and tested the *Londonderry Lithia Spring Water* for the relief of a ***chronic rheumatism*** that has annoyed me for years, and can most heartily indorse it and recommend its continued use to that large class of patients afflicted with the manifold and varied aches developed by the presenceof ***uric acid*** in the blood. Without compromising in any degree the nutritive functions or their harmony with the rest of the organic system, it seems to neutralize the poison in the blood, which is the germ of the mischief and the suffering. Every physician should know this water and take it into his confidence."

NORTHAMPTON, JUNE, 1883.

HENRY M. FIELD, M. D., *Professor Therapeutics, Dartmouth Med. School, etc.*

Londonderry Lithia Spring Water Co. NEWTON, MASS., Nov. 20, 1889.

Gentlemen: I feel under a sort of obligation to send you a word of unsolicited and favorable testimony respecting the value and virtues of your Lithia water. Some way, as I believe, for a general practitioner, I have seen an exceptionally large number of cases of that most tormenting affection, the slow and halting passage of a renal calculus from kidney to bladder. The tortured patient does not wish a repetition of such agony; the competent physician ought, pretty surely, to protect him from such repetition. Since my attention was first called to your Lithia water—several years ago—and I became satisfied respecting its pre-eminent power, I *have used no other Lithia water*, and in the cases just characterized I depend upon the *Londonderry* invariably and often as a last resource. Thus far it has rendered so good an account of itself that I feel bound to make the account, which I render good. I trust to your discretion and sense of propriety as to any disposition you may make of this letter.

Yours truthfully, HENRY M. FIELD, M. D.

PARTURITION.

Aletris Cordial (Rio), given in Teaspoonful doses every hour or two AFTER PARTURITION, is the best agent to prevent after-pains and hemorrhage. By its DIRECT tonic action on the uterus, it expels blood clots, closes the uterine sinuses, causes the womb to contract, and prevents subinvolution. In severe cases, it can be combined with ergot in the proportion of one ounce of fluid Ext. Ergot to three ounces Aletris Cordial. It is the experience of eminent practitioners, in all cases where ergot is indicated, that its action is rendered much more efficacious by combining it with Aletris Cordial in the proportions above stated.

GRIFFITH & CO.'S

Compound Mixture of Guaiac, Stillingia, etc.

After six years of thorough trial is now considered the standard remedy for

Acute and Chronic Rheumatism, Gout, Lumbago, Neuralgia, and Kindred Complaints.

***TO PHYSICIANS.—Gentlemen: We would respectfully draw your attention to our* COMPOUND MIXTURE OF GUAIAC, STILLINGIA, ETC.**

THIS is not a new preparation, but has been in constant use by many prominent practitioners of medicine for several years, and its beneficial results in the treatment of the diseases indicated, including Syphilitic troubles, have been fully established.

When ordering this Preparation, in order to avoid delay or misunderstanding, Physicians will please specify **"GRIFFITH & CO.'S,"** or Physicians in the city can send their patients direct to our pharmacies, **at No. 67 Third Avenue, cor. 11th St., or 2241 Third Avenue, cor. 122d St., New York,** where, at any time, further information will be cheerfully furnished. Out of town Physicians can order through their druggists or direct from us.

WE have hundreds of testimonials from prominent physicians who have prescribed and personally used this mixture. It is manufactured for **PHYSICIANS' PRESCRIPTIONS** only. Always specify GRIFFITH & CO.'S. If you have an obstinate case of Rheumatism under treatment, inclose One Dollar and receive, by express, a regular size bottle, or we will send, upon request, a sample bottle providing you will pay express charges. Wholesale Price-List—8-ounce size, $10 50 per dozen; 16-ounce size, $20.00 per dozen. In lots of one dozen and upward, we prepay express charges to any point east of the Rocky Mountains. **(Do not overlook this offer, for you may be pleased and possibly surprised at the results.** For the general verdict of the profession is that if this mixture fails to act on a case, it is a difficult matter to find anything that will.)

P. S.—The advertising of this article is confined strictly to Medical Journals.
Very respectfully,

GRIFFITH & CO., Chemists and Pharmacists,

67 Third Ave., cor. 11th St., and 2241 Third Ave., cor. 122d St., NEW YORK.

WESTERN PENNSYLVANIA MEDICAL COLLEGE

CITY OF PITTSBURGH.

SESSIONS OF 1891–92.

The REGULAR SESSION begins on the last Tuesday of September, and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon three regular courses of Lectures is requisite for graduation. A three years' graded course is provided. The SPRING SESSION embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects; this session begins the second Tuesday in April, and continues ten weeks.

The laboratories are open during the collegiate year for instruction in chemistry, microscopy, practical demonstrations in medical and surgical pathology, and lessons in normal histology. Special importance attaches to "the superior clinical advantages possessed by this College." For particulars, see annual announcement and catalogue, for which, address the Secretary of Faculty, Prof. T. M. T. McKENNAN, 81c Penn Ave.

Business correspondence should be addressed to
PROF. W. J. ASDALE, 2107 Penn Avenue, Pittsburgh.

CH. MARCHAND'S
PEROXIDE OF HYDROGEN

(MEDICINAL) H_2O_2 (Absolutely Harmless.)

Is rapidly growing in favor with the medical profession. It is the most powerful antiseptic known, almost tasteless, and odorless. Can be taken internally or applied externally with perfect safety. Its curative properties are positive, and its strength and purity can always be relied upon. This remedy is not a Nostrum.

A REMEDY FOR DIPHTHERIA; CROUP; SORE THROAT,
AND ALL INFLAMMATORY DISEASES OF THE THROAT.

OPINION OF THE PROFESSION.

Dr. E. R. Squibb, of Brooklyn, writes as follows in an article headed "On the Medical Uses of Hydrogen Peroxide (*Gaillard's Medical Journal*, March, 1889, p. 267), read before the Kings County Medical Association, February 5, 1889:

"Throughout the discussion upon diphtheria very little has been said of the use of the Peroxide of Hydrogen, or hydrogen dioxide; yet it is perhaps the most powerful of all disinfectants and antiseptics, acting both chemically and mechanically upon all excretions and secretions, so as to thoroughly change their character and reactions instantly. The few physicians who have used it in such diseases as diphtheria, scarlatina, small-pox, and upon all diseased surfaces, whether of skin or mucous membrane, have uniformly spoken well of it so far as this writer knows, and perhaps the reason why it is not more used is that it is so little known and its nature and action so little understood. . . . Now, if diphtheria be at first a local disease, and be auto-infectious; that is, if it be propagated to the general organism by a contagious virus located about the tonsils, and if this virus be, as it really is, an albuminoid substance, it may and will be destroyed by this agent upon a sufficient and a sufficiently repeated contact. . . . A child's nostrils, pharynx and mouth may be flooded every two or three hours, or oftener, from a proper spray apparatus with a two volume solution without force, and with very little discomfort; and any solution which finds its way into the larynx or stomach is beneficial rather than harmful, and thus the effect of corrosive sublimate is obtained without its risks or dangers. . . ."

Further on Dr. Squibb mentions that CHARLES MARCHAND is one of the oldest and best makers of Peroxide of Hydrogen, and one who supplies it to all parts of the country.

CAUTION.—By specifying in your prescriptions "**Ch. Marchand's Peroxide of Hydrogen (Medicinal),**" which is sold only in ¼-lb., ½-lb., and 1-lb. bottles, bearing my label and signature, you will never be imposed upon. Never sold in bulk.

PREPARED ONLY BY

Charles Marchand

Chemist and Graduate of the "Ecole Centrale des Arts et Manufactures de Paris" (France).

A book containing full explanations concerning the therapeutical applications of both CH. MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) and GLYCOZONE, with opinions of the profession, will be mailed to physicians free of charge on application. ☞ Mention this publication.

SOLD BY LEADING DRUGGISTS.

Laboratory, 10 West Fourth Street, New York.

FRELIGH'S TABLETS,

(Cough and Constituent),

FOR THE PREVENTION AND CURE OF

PULMONARY PHTHISIS.

FORMULÆ.

Cough Tablets.

EACH TABLET CONTAINS.

Morph. Sulph. ($\frac{1}{30}$ gr.), Atropiæ Sulph. ($\frac{1}{500}$ gr.), Codeia ($\frac{1}{60}$ gr.), Antimony Tart. ($\frac{1}{25}$ gr.), Ipecac, Aconite, Pulsatilla, Dulcamara, Causticum, Graphite, Rhus-tox, and Lachesis, fractionally so arranged as to accomplish every indication in any form of cough.

Constituent Tablets.

EACH TABLET CONTAINS.

Arsenicum ($\frac{1}{60}$ gr.), Precipitate Carb. of Iron, Phos. Lime, Carb. Lime, Silica, and the other ultimate constituents, according to physiological chemistry (normally) in the human organism, together with Caraccas. Cocoa and Sugar.

PRICE, THREE DOLLARS PER DOUBLE BOX.

Containing sufficient Tablets of each kind to last from one to three months according to the condition of the patient.

SPECIAL OFFER.

While the above formulæ have been in use, in private practice, over 30 years, and we could give testimonials from well-known clergymen, lawyers and business men, we prefer to leave them to the unbiased judgment of the profession with the following offer: On receipt of 50 cents, and card, letter-head, bill-head, or other proof that the applicant is a physician in active practice, we will send, delivered, charges prepaid, one of the regular (double) boxes (retail price, Three Dollars), containing sufficient of each kind of Tablets to test them three months (in the majority of cases) in some one case. Card, letter-head, or some proof that the applicant is a physician in active practice, MUST accompany each application. Pamphlet, with full particulars, price-list, etc., on request.

As we furnish no samples through the trade, wholesale or retail, for samples, directions, price-list, etc., address,

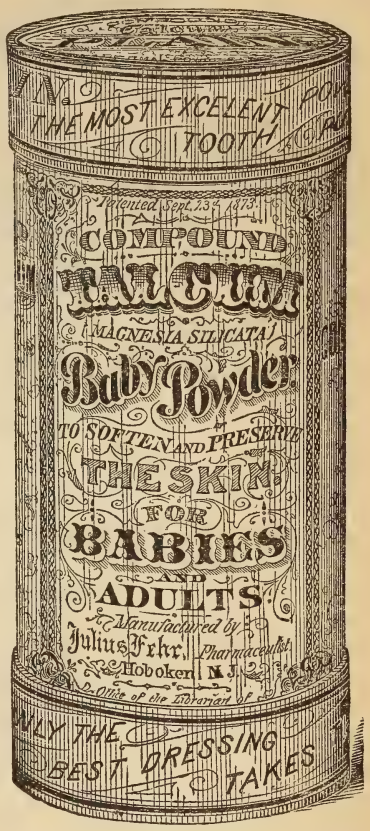
JULIUS FEHR, M.D..

Ancient Pharmacist, HOBOKEN, N. J.

Only advertised in Medical and Pharmaceutical prints.



LIQUOR SANTAL FLAV.

CUM

BUCHU ET CUBEBA.

(ORIGINAL FORMULA.)

This elegant preparation has been very successfully used in the treatment of long-standing Gonorrhœa and chronic Gleet.

If given in the early stages of Gonorrhœa, it will usually arrest the progress of the disease.

It is especially effective in all inflammations of genito-urinary mucous membranes.

It is perfectly miscible in water. Dose, f℥ i to f℥ ij, three times a day in water or milk. When prescribing, please specify Liq. Santal Flav. cum Buchu et Cubeba (Ogden's).

SYRUP OF FIGS.

(Syr. Fici Cal.)

In order to meet the almost universal demand for a safe, reliable and elegant liquid laxative, the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

is utilizing the delicious blue Fig of California in the preparation of

SYRUP OF FIGS,

an agreeable and effective laxative or purgative, according to the dose and manner of administration.

Syrup of Figs is delightful to the taste, and may be taken by every one, from infancy to old age.

Syrup of Figs does not debilitate, and is perfectly safe.

The dose as a purgative for an adult is from one-half to one tablespoonful and may be repeated in six hours if required. As a laxative, one or two teaspoonfuls may be given at bed-time or before breakfast.

For children the dose may be regulated according to age and desired effect.

SYRUP OF FIGS

is recommended and prescribed by prominent physicians in all sections of the United States, and gives general satisfaction.

In addition to the blue Figs of California, we use the juice of true Alexandria Senna, representing the laxative and purgative principles without its griping properties, also pure white sugar and an excellent combination of carminative aromatics.

Devoting our entire attention to the manufacture of **Syrup of Figs** after a thorough study of the results to be accomplished and of the best methods to produce a perfect laxative, and with complete manufacturing facilities especially adapted to the purpose, we are enabled to offer to the medical profession, in **Syrup of Figs**, a laxative which, though simple in itself, cannot be produced in all its excellence by other parties, and we believe and trust that physicians will not permit imitations to be used when they prescribe **Syrup of Figs** (Syr. Fici Cal.).

SYRUP OF FIGS

is manufactured only by the

CALIFORNIA FIG SYRUP CO.

OF

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N. Y.

It is sold to the drug trade in bottles of two sizes only: the smaller bottles containing full four ounces and the large size about ten ounces.

The following fac-simile is a sample of hundreds of communications which we are continually receiving from the Medical Profession in regard to the value of ***LACTO-PREPARATA*** in Infant Feeding.

WE DO NOT SOLICIT TESTIMONIALS, NOR PUBLISH THEM WITHOUT PERMISSION.

Reed & Carnrick
New York

Gents

I have just received your samples of Lacto-Preparata. Would take pleasure in saying that it is no stranger to me. On the 4th inst: I reported to our Dist: Med: Society here two cases of very young infants who had Cholera infantum produced mainly by their mother's milk being unfit. They were in the last stage of prostration in particular-months nearly. I put them on R. & C.'s Lacto-Preparata, and forbid any more mother's milk. They both recovered speedily. I regard Lo-P. as the sine qua non of all growing baby food. I thank you for getting it up. Five years ago those children would have gone where all have to go soon.

Very truly
B. F. Records M.D.

"What a boon it would be to the Medical Profession if some reliable Chemist would bring out an Extract of Malt in combination with a well-digested or peptonized Beef, giving us the elements of Beef and the stimulating and nutritious portions of Ale."—J. MILNER FOTHERGILL, M. D.

ALE & BEEF

"PEPTONIZED"

(EXTRACT:—Bovis Cum Malto.)

Is the identical Combination suggested by the late eminent Fothergill.

EACH BOTTLE REPRESENTS 1-4 POUND OF LEAN BEEF THOROUGHLY PEPTONIZED.

It is the only Mild Stimulant combined with a perfect Food known.
It is very palatable, aids digestion, is retained by the most delicate stomach, and the purity of its ingredients is guaranteed.

THE ALE USED
IS THE PUREST AND BEST MADE IN AMERICA,

Especially brewed for this purpose, and guaranteed to be equal to the best imported ales, as only the best Canada Malt and the choicest new hops are used in its manufacture.

IT IS A REAL FOOD; NOT A MERE STIMULANT,

as it contains all the albumen and fibrin of the beef as well as the nutritive qualities of the malted barley.

It is most useful during the period of Gestation, in allaying all vomiting, and invaluable to Nursing Mothers, also in Typhoid Fever and Dysentery and all wasting diseases.

DR. I. N. LOVE, St. Louis, says: Since the product has been brought under my notice I have prescribed it in the sick room to one hundred recorded cases. Patients who had suffered from loss of flesh, dependent upon various forms of Dyspepsia, when they partook of the Ale and Beef, "Peptonized," felt much benefited. I have now under my observation three patients, the victims of the dread disease pulmonary consumption, in which the digestive tract is demoralized, and in which it seems impossible to bring to bear any form of nutrition which is not disgusting to the patient. In all these cases the drink is a Godsend. A number suffering from prostration, following serious attacks of the recent epidemic of La Grippe, accompanied by loss of appetite and a general feeling of worthlessness, were braced up and greatly benefited immediately after commencing the use of the Ale and Beef, "Peptonized." In half a dozen cases of typhoid fever, in which everything else was distasteful to the patient, the Ale and Beef, "Peptonized," pleased the palate, and nourished and strengthened the patient admirably.

I feel personally under obligations to those who have presented so valuable a product to the medical profession, and many a tired and faded patient will be revived and strengthened by the life-giving drink, Ale and Beef, "Peptonized," which is a happy union, in that it contains mildly stimulating (alcohol in small quantity), gently tonic (a modicum of the active principle of hops), decidedly nutrient (malt and beef) and positive digestive (diastase and peptonoids) properties—a union which is in harmony with well-known physiological principles, and will in my judgment be indorsed by careful bedside clinicians.

DR. W. F. HUTCHINSON, Providence, R. I., says: I have used Ale and Beef, "Peptonized," very freely during the past few months and am delighted with the effect obtained. One case was that of a hopeless paralytic, unable to retain any food and steadily failing, for whom I ordered one bottle daily. Her stomach never rejected it and has steadily gained since she commenced using it.

CINCINNATI, July 9, 1890.

THE ALE & BEEF CO., Dayton, Ohio.

I am very glad to hear of and note the success you are having with Ale and Beef, "Peptonized." Its reception in this city must be very flattering to your company. As a nutrient tonic it is just the thing in a great host of cases. The name itself, backed by honest manufacture, is a combination that commands and strikes attention at once. With kindest congratulations and wishes that your fondest anticipations may be more than fully realized, I am yours truly,

J. C. CULBERTSON, M. D.

KANSAS CITY, MO., July 12, 1890.

THE ALE & BEEF CO.

DEAR SIRS:—Answering yours of 8th inst., will say that I have used the Ale and Beef, "Peptonized," in both hospital and private practice, and am much pleased with it. My house surgeons (Drs. F. R. Smiley and Geo. F. Hamel) inform me that it agrees with the stomach in cases where food cannot be retained, and this agrees with my own experience. *I had one case of a delicate lady with a forming pelvic abscess* which involved the ovary. There was constant vomiting and retching. She retained the Ale and Beef, "Peptonized." This, after I had tried a number of things which had failed. She drank it steadily for a month, and it seemed to be, in her case, food, medicine and stimulant, all in one. It is an excellent thing. Keep up the good quality of the preparation and it will readily sell. Very respectfully,

WILLIS P. KING, M. D.,
Ass't Chief Surgeon, Mo. P. Ry

Wyeth's Beef Juice

A Liquid Preparation of the Choicest Beef, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

Physicians have, for a long time, had their attention called to the fact that beef extracts, made by the LIEBIG process, are utterly devoid of the valuable and nutritious albuminous constituents of meat, as these are coagulated and filtered out in the process of manufacture. In consequence, the most advanced class of medical practitioners to-day, merely use the commercial extracts of meat as stimulants, and not for any nutritious properties they may possess. Realizing this fact, we have, after continued and exhaustive experiments, succeeded in preparing the article which we offer as WYETH'S BEEF JUICE, and for which we make the following claims:

FIRST.—That it contains all of the albuminous principles of beef in an active and soluble form. This may be proven by mixing a small portion of Beef Juice with an equal part of water in a test-tube or any convenient vessel, and gradually heating to the boiling point, when the albuminous principles will be coagulated.

SECOND.—That it contains the Hæmoglobin of the meat unaltered, as is evidenced by the bright arterial color of the preparation, and by the fact that it loses this color upon boiling, as the Hæmoglobin is precipitated with the albumen.

THIRD.—That it will be found upon trial to possess the nutritive properties of the choicest beef to a higher degree than any extract of meat yet offered to the profession.

Physicians will find WYETH'S BEEF JUICE of great value as a strengthening diet in cases of convalescence, consumption, nervous prostration, and similar diseases; also, in typhoid fever, debility, etc. Beef Tea prepared from it, contains more nourishment than any other liquid preparation of meat, and, when properly seasoned, is more grateful and appetizing to the patient. Professional men who are suffering from over-work, mental anxiety, etc., will find that one-half teaspoonful in about half a glass of iced water, taken at intervals during the day, and upon retiring, will relieve fatigue,—both of mind and body.

DIRECTIONS.—In cases of debility, nervous prostration, convalescence, etc. one-half to one teaspoonful in a half tumblerful of iced or luke-warm water.

CAUTION.—As the valuable albuminous elements are rendered insoluble by extreme heat, this preparation should only be mixed with iced or LUKE-WARM water, and never with water at the boiling point

New and Old Cures for Consumption.

Many plausible theories of pathology and promising systems of cure arise from time to time to excite the hopes of those afflicted with that dread disease, consumption.

Within the past few years we have seen several such systems run their course of popular enthusiam, professional encouragement, through test and ultimate failure. The best that any exclusively germicidal treatment can do, if successful at all, is to destroy the germs, or dislodge the germ-bearing tissues, and leave the patient in his original condition, modified by the destructive lesions which have already taken place.

But especially must it be borne in mind that the new method of treatment put forth by Prof. Koch, is, confessedly, not applicable to the vast majority of consumptive cases, where the disease has already made considerable advance, but only to those that are in the incipient stages. It is also contra-indicated in cases of tuberculosis of the meninges, brain, larynx and other confined localities or narrow passages, where the hyperemia induced and the necrosed tissues will give rise to serious and generally fatal disturbances.

Even with the best of germicidal treatments, then, in pulmonary phthisis, the reconstructive measures will still be needed to aid in the process of repair. In fact, without them the patient would be left peculiarly pre-disposed to immediate re-infection with the disease. It is, then, safe to predict that no method of treating pulmonary consumption will ever be devised, however radical in its nature, which will supersede the well-known hygienic and reconstructive measures.

The reason for this is plain to every thinking man. Even before the patient was infected at all, before any anatomical lesion existed in the tissues, at an unguarded time of lowered vitality, the germs of disease made a successful lodgment, and the destructive process commenced.

Now, it is a well-established fact that the chief of all reconstructive remedies is the combined hypophosphites of lime and soda—*and this very remedy has long been in successful use in the treatment of consumption.* It is of equal value as a prophylactic in those cases that are constitutionally predisposed to the disease, and as a curative agent in the incipient and even somewhat advanced stages. It alone has proven to be more successful in curing pulmonary tuberculosis than the Koch method, and without any of its dangers and complications. It accomplishes its work gradually and insensibly, replacing new tissues, cell by cell, for the broken-down, diseased tissues as they are removed in a true physiological process by the absorbent powers of the system. In this there is no sudden "reaction" or violent process, removing large and dangerous sloughs, leaving the patient prostrated by the shock, and the adjacent healthy tissues raw and exposed, liable to receive the disease germs anew, and to disseminate them throughout the system more rapidly than before.

So, then, whether any of the germicidal treatments be ultimately successful in removing the cause of the disease or not, the hypophosphites of lime and soda will still be a necessity in the armamentarium against consumption. As a specific curative agent, it will outlive them all.

But it is of the utmost importance that you assure yourself of the chemical purity of the preparation of the Hypophosphites which you use, as it is peculiarly liable to deterioration unless properly prepared. The McArthur Hypophosphite Co., Bolton, Mass., will send you valuable information upon the treatment of consumption, if you so request.
